1. Any ideas about reviving 800xl

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-01 00:00:00 UTC
From: Rich Link <ral@iglou.com>
Message-ID: <31D74C0F.1935@iglou.com>
Source record: 82550

Apparently I encountered a bad power supply that has screwed up my 800xl.
The unit will get the green screen, but then goes black, no sound, no
disk drive seeking, etc.

The unit was working before using this power supply. It doesn't appear
to be putting out AC but I'm not trying it on any other units.

Based on the symptoms, can anyone suggest possible parts that may have
blown?

Since no one else has posted yet, I guess I will.

Unlike the 8-bit doorstop c64, the Atari 8-bits allowed you to daisy chain all of your serial devices through the one port on the computer. If you have a disk drive for this, you will notice that there are 2 serial ports on the back. This is so you can continue the "chain" of peripherals. And, as far as I know, aside from the standard Atari sio ports, the only way to connect disk drives into the 850 is through the use of an SIO2PC or APE cable...

-Alf

5. Re: IRC--- #atari8 on efnet-be there or be a c64 user ;)

Newsgroup: comp.sys.atari.8bit

IRC is made up of a series of computer servers that relay the
messages people type to the other servers, which in turn relay the
messages back to the user logged on to that server.
Efnet is a series of such servers. A list of efnet servers will
follow.

The way to connect using a shell account is usually to type a command
like:

irc 130xeGuy irc.stealth.net

where "irc" starts the irc program on the host computer, "130xeGuy" is
your desired nickname, and "irc.stealth.net" is the server you want to
connect to.

Once you are connected to the server, you must issue the command:

/join #atari8

to join the discussion of Atari 8-bits.

I have found IRC to be _the best way_ to come in contact with other
people sharing the same interests as I do, except for the Atari croud,
despite the fact that #atari8 is listed in the FAQ. : (

A night ago I logged on irc, and stopped in #atari8, and found two
people, Gumi and Waldi, both Polish coders that unfortunately didn't
speak English very well. But, I am now recieving via e-mail a new
polish demo they have been working on! :)

In any event, traffic in #atari8 is slow, with the bot (bot=script
that keeps the channel) being the sole occupant most of the time.
So, I decided to advertize #atari8's existance here, hoping to spur
interest.

Knowing firsthand how chat can be a huge timedrain, I thought that
maybe weekly get-togethers of Atarians might be a better way to go,
than simply promoting its existanse, and having people show up, but
not at the same time.

Alan, I see your an AOL-er. AOL provides a way to use standard winsock apps with their frontend software (2.5 for win-doze users). I suggest the easiest way for you to get connected to IRC is with mIRC, a freeware IRC client that is by far and away my favorite. :)

Rick

here is a list of Efnet IRC servers: irc.stealth.net is my personal favorite, as the connect times are short, and the lag is manageable)

For that matter we could move it to Dal-net, as the chan-serv is worth
it. In my experience, Undernet sucks just as much as Ef-net. Dal-net
is only better because of the Chan-serv.

>Is there a way to connect Atari joysticks to a Mac? I'm running Rainbow and >being able to use the joysticks would be great.

I've thought of a possible method of doing this. One would need a semi-sacrificial Mac joystick (not the analog type). You would take this stick apart and wire up connections from its switches to the switches in the Atari stick (if you take your time to do it right, you can simply have an extra cable come out of the Mac stick with a 9-pin DIN male connector on the end). Now that you have the Atari stick controlling the Mac stick's state, you just have to configure the Mac stick's driver software so that it simulates the correct keypresses for Rainbow. (Most Macintosh joysticks allow you to simulate keypresses for joystick movements, so you can play games that only accept keyboard input.)

I have seen a fairly cheap Nintendo-style gamepad for the Mac that would probably serve well for this kind of project.

It would be a much bigger project to try to interface the Atari stick yourself. ADB, the interface used on the Mac to connect joysticks, mice, and keyboards, is a multiperipheral serial bus. You need at least a UART and probably a microcontroller (ADB devices are intelligent). Not difficult, but it's a lot easier (and probably cheaper) to cannibalize or alter an existing ADB joystick.

The 850 is almost always used along with disk drives; it has two 13-pin
connectors so that you can daisy-chain it with the disk drives. It has
four serial ports, but you can only use one at a time, and there is little
or no software which accesses ports 3 or 4. The pinout for the serial
ports is not the same as the 9-pin serial ports on an IBM computer; Atari
used 9-pin ports before IBM did. You can still get modem and printer
cables (I think) from B&C Computer or American Techna-vision, or someone
can post the pinouts for the cables.

The only way i know of to do this is the ChoiceStick Adapter (search the net) But it seems silly to me to spend $60-$70 to hook up a $6-$7 joystick, esp when you can buy a nice 8-bit system for that price.

how did you make it pre-emptive when the 6502 processor itself has no way to check for boundaries or anything (so called trap errors coming from the processor itself (in pc systems btw)). In what way can the operating system take back and control software running under it?. Maybe someone from microsoft could implement it in their own products ;-).

I think you can still join. Only one local member was hedging on continuing the club, and I think I have him convinced that poor Alex's triple + role will be successfully split. If we agree at our next scheduled meeting (Saturday 7/6,) I'm going to take over the newsletter. That's a big chunk.

Just follow the directions that Alex sent you on Fido. Of course, if you don't have them, or you want to find out for sure if the user group will continue, wait until after Saturday and then send me a reminder.

Alex passed away very suddenly. I spoke to him the night before it happened. He had just come back from a small vacation and he sounded good. Another local member spoke to him just two hours before the attack. Again, he sounded good.

It is a very great loss, but I have every confidence that OHAUG will continue to be a strong force in this community.

Nope, it doesn't replace the drives. It chains right through it. There were a number of serial (RS-232 as opposed to Atari SIO) and/or parallel(as in Centronics) interfaces made for the Atari series, and this is one of the earlier ones. It's got its own power supply on a wall transformer, and it has a maximum speed of 9600 baud. The 9-pin ports labeled R1 through R4 are serial. R1 is full hand-shaking (except for RI line). However, the pins are not wired like an IBM 9-pin serial connector. You need a special cable. The parallel port, too, is not standard. It is the DB-15 connector on the end of the unit. This also takes a special cable with the usual Centronics connector at the other end. The trapezoid-chaped connectors are for daisy-chaining the 850 into the SIO.

Thanks, Rick, for a very detailed answer. I printed it out and will read it when I have a chance. I should make contact via your method soon.

Besides AOL, I'm also involved in AT&T Worldnet, which can probably also do the job.

27. PC Xformer cable Info ...

Newsgroup: comp.sys.atari.8bit

From: Bill Somrak <cooncat@ncweb.com>
Message-ID: <31D86824.4523@ncweb.com>
Source record: 82576

Hi,

Many have asked for it, and now its available.

I scanned in the descriptive "plans" for making the PC Xformer cable,
which is used with PC Xformer 3.5 (ONLY!). It is in the form of a
BMP file, and is about 203k in size. If you'd like a copy, email me,
and I'll send it as an attachment.

UNFORTUNATELY, since Darek removed me from his "valued customers" list
(does he really have any ... seems like all he really values is his own
arrogance), I can't try out the cable, unless I were to receive a copy
of 3.5 from some source other than Mr. M. Oh well, we'll just have to
see what happens.

Cheers!
Bill

Does anyone recall a company called Irata Verlag? I believe they
were in Berlin and produced a disk drive interface for the 8-bit Atari's
that allowed direct connection of IBM compatible disk drives. They may
have also produced other products for the 8-bit Atari's.

32. Atari 850

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-01 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <31d875e9@pianosa.demon.co.uk>
Source record: 82581

Whilst reading the usual rubbish I find here, Jeff Cotterman wrote something interesting to All about Atari 850:

Hello Jeff,

JC> My newest find was an Atari 800 and an Atari 850... And this is what I
JC> What is it??? As much as I can figure, you plug this thing in instead

You are indeed correct. The 850 provides the Atari 8-bit range with 4 serial and one parallel port. Note that the four serials ports aren't all the same. Also note that, although the parallel port can be used at any time, to use the serial ports, the Atari requires an R: handler to be loaded, usually as an AUTORUN.SYS file, from disk.

JC> Am I right? Can you have drives plugged in at the same time?? What is

Yes, the two large "D" ports on the 850 are to allow the daisy chaining of peripherals. That's disk drives, cassette drive, etc.

>inverted pyramid into a marble, as in marble madness.

Yep. You could be an inverted (spinning) pyramid, a marble, or a little thing that seemed to be intended to be a gyroscope. :-)

I've always been mightily impressed with SpinDizzy's smooth "three-dimen-sional" grapihcs, and have often wondered how it's achieved. I once spent a small amount of time attempting to disassemble the game, but didn't get far. Anybody know how the programmers get such terrific 3-D, while also storing what seem to be HUNDREDS of "rooms"?

Chris

37. I AM THE NEW ATARI ARCHIVIST!

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-02 00:00:00 UTC
From: kendrick@sitka.sonoma.edu
Message-ID: <4r9ute$4p6@nuke.csu.net>
Source record: 82583

Hello! As of this morning, I am (FINALLY! - delays, delays!) the new Atari 8-bit archivist at the University of Michegan site! (I'm replacing Jody Lenn who has been quite busy for some time.)

So far, I've reorganized a lot of stuff, cleaned out some old files, taken some stuff offline temporarily (the CompuServe libraries, for example.. I plan to move all of those files where they belong - I would love any indexing help! :)).

Please note that many files have been moved from their previous locations. Some directories have bitten the dust. Some new directories have appeared. And ESPECIALLY note that many directories now contain subdirectories!

For example:

Emulators
Computer (ie, PC Xformer, Rainbow, XL-It!, etc.)
Peripherals (ie, SIO2PC, APE, etc.)

Games
Adventure
Action
Board
...

Hopefully everything makes sense! I have to apologize to Dean Garraghty and Mike Hohman. The "Djg" and "Fte" directories are gone. It's quite confusing to go into the "Os" directory (where MyDOS, Atari DOS, etc. are) looking for a copy of Spartados and not find it! How is one to find it in "Fte" without knowing it's there!? :)

Anyway - folks who have put off uploading to UMich because it's been "dead", please start uploading again!

I'll accept MIME or UUencoded e-mail at: kendrick@zippy.sonoma.edu
and of course the "New" directory is on!

For those who don't know or don't remember, some FTP addresses to this old and now resurrected site is:

ftp://atari.archive.umich.edu/atari/8bit/
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

Have fun! (BTW, my username at UMich is "kendric" without the 2nd "k")

-bill!

>-Marlin
The PS would be easy to build/find. The question is where did you
find a 1400XL/1450XLD for sale? If you found one, and it works, the PS
would be a minor thing to get. It would probably be similar to the XE
series PS more than the XL series due to the extra stuff in them.

Maybe you need to read the definition of pre-emptive again?
It seems like you are trying to refer to virtual memory but it
has no relation with pre-emptive multitasking!

>In what way can the operating system take
>back and control software running under it?.

Using a timer interrupt or an interrupt from an I/O device, for example.

>Maybe someone from microsoft could
>implement it in their own products ;-).

I don't think discussion of Microsoft products is relevant here.

Message-ID: <31D922C7.5358@rcp.co.uk>
Source record: 82592

Hi,

Does anyone know how the 3 sector boot loader is
created when a DOS disk is formatted?

I heard that it may be in the ROMs of the Disk Drive
but it is completely different for each DOS. Also I
have had a quick search though DOS.SYS and DUP.SYS
and have not found a copy or parts of it there.

Thanks
Ivan

Shouldnt be slow as its our biggest server with a T1 connected to it.

Drop me an email from where youre at and Ill investigate.

See ya, Joe

|>

There was an article in an old, old Antic (or was it Analog? - a mind is a terrible thing to waste) which tells you just how to do this. I built this mod on my old 400 (RIP) back in the 1985-6 timeframe. I'd look through my collection and locate the article but I'm finishing my basement and all my mags are current inaccessible. Can someone else locate this? It would probably date from 1984-5 or thereabouts.

I think the problem's around your end. I accessed it last night and it's
blindingly fast. (Via San Francisco internet provider to Missouri).

Does anyone have directions for a Newell 256XL Rev A memory upgrade for a 800xl? Here are the Solder pads that require a wire.

RA8
PB2
PB3
PB4
PB5
PB6
DEL
HALT

I also know it involves a switch. If you could mention which chip/pin I have to solder these to would be most appreciative...

Rory

I think you mean when DOS files are written to it. It would have to be part of DUP.SYS in the case of Atari DOS 2.0 and 2.5 option H. Anyone care to disassemble?

Have you test booting the translator disk first, and then the game ?
If this doesn't work try using a quick menu maker like these in superdos
5.1

All the progams are available in the u-mich archive.

M.

Los drives grises (XF551) pueden leer discos de Doble densidad sin
problemas, tanto de un solo lado (180 K) como de los dos lados (360 K)

solo unos comentarios extra
-Myutil no funciona con todos los drives de PC (no se el criterio para
decidir cuales, solo trata varias)
-el programa My util y los archivs a transferis deben estar en el mismo
directorio.
-Una 1050 modificada tiene el problema de girar ligeramente mas lento,
esto significa que si tu formateas tu disco en PC y luego escribes en la
1050 puedes echar a perder tus archivos. (con la XF no hay problema)

sigan ATARIandose !! :->

Caramba con tu articulo !!, creo que sera una gran ayuda para los
neofitos :), (gracias por el parche para TBXL)

Maybe you need to read the definition of pre-emptive again?
It seems like you are trying to refer to virtual memory but it
has no relation with pre-emptive multitasking!

>In what way can the operating system take
>back and control software running under it?.

Using a timer interrupt or an interrupt from an I/O device, for example.

>Maybe someone from microsoft could
>implement it in their own products ;-).

I don't think discussion of Microsoft products is relevant here.

I built one of those too. It was in Antic magazine. I gave away all
my magazines to an atari user group long ago, but I think I still have
a photocopy of that article at my parents' place. It'll probably be
a couple weeks before I visit them again though.

Um, Timer Interrupts (IRQ). They have been around for a long time. I
personally have implemented them to implement multitasking in my VIC-20
and in my course-project Real-Time 486 multitasking OS. It's not that
hard. PC-industry OS developers just don't know what they're doing. :-)

Keep on Hackin'!

I believe you can you use off-the-shelf Mac joysticks as these usually
come with a control panel to choose the keystrokes for
the joystick to simulate. I've *never* tried this but someone told
me it works.

The gods have smiled on me and I'm getting some back-pay that's been owed to me, so I figure -- what the hell! -- I'll blow it on some obsolete and unrepairable hardware. :-)

Looking to purchase:

Atari 1050 Floppy Drives
Need a total of three drives, preferably with US Doublers installed though I'll take 'em without. They MUST WORK, and they must include good cables and power supplies.

Black Box
Says it all. I want one.

ATR
Again, says it all. I want one of these too.

Send asking prices to mail; thanks. :-)

>> ;-).

Notice that normally the 6502 address space is full
with additional memory (if available) banked in by an external
memory management arrangement. So if the 6502 *had* 'boundary
errors' it would be pointless -- I believe the Andre's original
6502 box had memory banking on 4K boundaries (is that right?)
which give 16 different relocatable chunks of memory in the
memory space. So the assumption that
(logical address space) > (physical address space)
is often strictly false for a 6502 machine. (That includes
the original 6502, with 64K RAM, 16K ROM, and 0K < IO < 4K
space, for a total physical address space (not counting
duplicated register locations) of 80K < physical addresses < 84K.

That's not fair. There was really only one
set of PC-industry OS developers that didn't know what
they were doing, and a lot of people since trying to
live with that legacy. (A hysterical raisin, so to speak).

OK, today is 7/2. I'll give these items a few weeks and then they
are going into the trash. I previously posted a 4sale note and
I haven't gotten any responses. I'd like to move it as one lot
but I'm open to offers. Basically, your offer should cover
the cost to ship these items from CT to your location.(unless
you can pick then up.

Unfortunately, I'm not in CT, so I can't look through the items
for any software or check out a book,etc.

Respond via email to kmajkut@netcom.com
======================
The List:
1 Atari 800 computer w/48k of Atari memory
1 Atari 800 computer w/16k of Atari memory, 32k of other memory
and 'Impossible'.
1 1050 Disk drive - working.
1 1050 Disk drive - not working. It just starts up and spins.
(One drive is in the original box if anyone cares)
1 1030 300baud modem.
1 410 Cassette recorder.
(In the original box if anyone cares)
3 or 4 power cables.
3 Atari joysticks.
1 set of paddles.
2 Printer Adapters(One works and one doesn't)
Uprint A16 & MPP1150

Some misc interface cables.

Compute Books:
Machine Language for Beginners
Book of Atari Graphics
Books 1,2,3 of Atari
Your Atari Computer:A guide to the ATari 400/800
Atari Basic
Mapping the Atari
Atari 1050 Field Reference Manual

Carts:
Robotron
BASIC
Kickback(I don't remember what this is)
AtariWriter

Software:
Infocom-Ballyhoo,Infidel,Wishbringer(all in boxes,etc)
Many other pieces of software. Mostly arcade games and
infocom games.

No guarantees or warantees, everything as is. One 800 was powered up
last year and worked fine.

As part of the FMS of DOS, there is a machine language program that
can write to this part of the disk. It has specific information and
format. SpartaDOS disk versions also have this program seperate as
BOOT.COM. At the DOS prompt, you type BOOT file2but.com <cr> and as
loong as it has bootable infor in the file, it will boot and run.This
is one way to create SD3.x disks if you only copy X32D.DOS to the disk
after format (not during the format process). It would be BOOT X32D.DOS
<cr>. That's also provided you started you system in SpartaDOS 3.x.

Since these machines were designed to work on TVs not monitors,
this is a bit difficult. You need a device that has a tuner adjusted to
the frequency that the game console is using then seperate the various
signals V-Sync, H-Sync, Chroma, Luma, and audio then pass them on to
the monitor. Hooking the Game console into a VCR then using the Video
out to the monitor would be an example of this. The picture quality
probably won't be any better than going directly to a TV, though. Same
process, but more stuff in-between.
Another thought would be to build a small circuit into the console
that steals the video and audio signals before the RF conversion and
condition them for monitor consumsion. This, obviously, means surgery
on you game console. Not recommended if you don't know AV/RF
electronics.

> rsely@ix.netcom.com

For the 2600 you need a tuner (TV, VCR) or you can take directly the video signals inside the coleco has a rgb output

Yes, i've been booting up with OPTION pressed down (on the Real 8-Bit) and also using the nobasic option on XF3.5. No joy.

And Yes (again!), i've tried it with the XE/XL FIX by pressing SELECT when this program has run. No joy (again!).

I've not tried using a Quick Menu Maker (superdos 5.1 ?) (re: message from Mariano), where & what exactly is this utility ?

Anybody else like to suggest something

cheers in advance

Has anybody got a 1050 floppy drive for sale in the U.K.
I have had offers from outside the U.K. but don't want to have it
posted from at least 3 million miles away.

(Thanks to everybody who posted me back !)

I can afford 30 pounds u.k

If you don't want cash I can trade new copies of Worms (P.C or Amiga),
World Rally fever (P.C.) and Worms Rienforcements (P.C.)

: errors' it would be pointless -- I believe the Andre's original
: 6502 box had memory banking on 4K boundaries (is that right?)
Yes, you're right. The sixteen chunks of 4k each could be mapped from
256 possible chunks in a maximum of 1MByte available memory.

That even gave me some memory protection scheme. Imagine one process
having allocated 8kByte of RAM. Then the first two pages are mapped
to different RAM pages. The pages up to the kernel are mapped to
some unused pages - well, actually there are copies of the kernel,
which is in the last page (with IRQ and NMI vectors).
So the process had access to its own 8kByte RAM and some read-only
copies of the kernel - no other processes' RAM available.

This way it would even be possible to do some paging mechanism,
i.e. swap out processes if they are waiting. The only thing that
must be taken care of is, that once a process is running,
all memory pages belonging to this process must be mapped
and available.
As you all know, the 6502 doesn't detect memory faults. And even
if there were an NMI generator when accessing a wrong page, there
is no way to restore the register contents to the state before the
trap - which is essential, if the opcode is re-executed after the
page has been read in and mapped.

This feature, restoring the CPU registers to the value before an
address or bus error, was the improvement from the Motorola 68000
to the 68010 CPU.

: which give 16 different relocatable chunks of memory in the
: memory space. So the assumption that
: (logical address space) > (physical address space)
: is often strictly false for a 6502 machine. (That includes

: the original 6502, with 64K RAM, 16K ROM, and 0K < IO < 4K
You mean C64, don't you ;-)
: space, for a total physical address space (not counting
: duplicated register locations) of 80K < physical addresses < 84K.

Even the newer PET computer (8096, 8296 or so) had more than 64k
memory. They also did some kind of bank switching, although I don't
know how.

so long

: using the NMI for it... Those CIA's might come in hand, every now and then..

Well, I'm using the timer interrupt. But then I use the IRQ timer.
A disadvantage is, that 'nasty' programs can take full control over
the machine. An advantage is that the system itself cannot be
interrupted when doing critical routines. Well, that could have been
taken care of with a flag (to immediately return from NMI) but
I thought it was easier this way.

And as I wanted to run close-to-hardware processes on the machine, I
wanted a process to be able to protect itself from task switching.
Which is obviously easier when just doing a SEI instead of
calling some StopMultiTasking or RestartMultiTasking (as the Amiga does)
to access some kernel internal flag - which is not available in the
process memory.

An *easy* way to do some of what you want is to get a Coleco ADAM and the
2600 converter. The ADAM has a built in composite output so you're set
for CV carts and 2600 carts. If you don't have the Coleco stuff it can be
more expensive getting it than hacking...but certainly easier.

I thought in DOS 2.5 and maybe in Mydos the boot sectors contained the same data that's in memory locations $700-87f. When you open the file "DOS.SYS" for output, it automatically writes a copy of the boot sectors and the DOS that's currently in memory.

Gawrsh, I'm blushing. <blush> See?

I would love to do some more writing. Unfortunately, this thing called "Real Life" (tm) has jumped up and grabbed me by the balls, er, backside. Since Ben Poehland wound down the operations of the previous incarnation of AC, both my wife and I went through involuntary job changes necessitating a move to another city. Unfortunately, my new employer is somewhat more demanding of my time, which means I have less time to hack with the Atari. Coupled with the fact that my kids are now old enough to partake in extra-curricular activities (like soccer twice a week for each of them) I quite literally have little to no spare time. (I can hardly wait for the start of the hockey season, with its 5:00am parctices.)

Even though I don't actively participate in the group much these days, I still lurk daily and contribute whenever I can. Even if I can't quote chapter and verse of every issue of Antic off the top of my head. :-)

In my original design, the memory pages from other processes just couldn't
be accessed, as they were not mapped in. (As I explained in another
post). A process with 8kByte RAM just had access to 8 kByte RAM
and the rest of the address space would be mapped into some read-only
regions (well, I used the kernel image...)
So that the process can just change it's own RAM.

That's even a way to implement paging, i.e. put a process out on disk
if memory is short. Only one thing, as you mentioned, has to be taken
care of: The 6502 cannot detect memory faults, so that _all_ memory pages
belonging to the process must be mapped and accessible when it is run.
(Even if there were some hardware mechanism to detect the fault,
there is no way to restore the original register values as before the
trapped memory access - which is essential to correctly re-execute
the offending opcode after the page has been loaded.
The capability to restore the register values was one of the few
improvements of the Motorola 68010 CPU above the 68000.)

Check my webpage for a very simple 2600 composite output programme.

For the other machines, it might just be a matter of bipassing the RF modulator.
For the TI-99, it's a simple 5-din monitor cable (like the old C-64 ones)

I used to have it. It was a pretty cool demo with this "ball" that bounced around in a 3-d sort of way, in rhythm with the music that was playing, and supposedly, where the ball bounced was related to the particular notes that were being played. I'd e-mail it to you, but all of my 8-bit stuff is in storage right now.

108. happy 1050 problem

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-04 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <31db385c.2720464@news.superlink.net>
Source record: 82419

I recently acquired a happy 1050 drive, which works fine BUT when you try to use the happy 7.1 backup software to backup a disk (ANY disk, protected or not) it reads track 0 fine, but gives an error when it tries to read more. It passes the diagnostics from happy, and the sector copier works fine. I tried another 1050 drive mechanism in it, and it gave the same results. When It tries to read track 1, the drive busy light blinks on and off and the motor tries to spin, it spins a little bit, but not enough to spin the disk. The only things weird I've noticed is that a wire is soldered from the happy board to a pad on the 1050 board that has a resistor just hanging, not connected to anything, and a switch from the happy board to select something (I believe turns happy mod on or off).
Any help would be appreciated.

Thanks for you interest Alan. So far I've met only Joe Kearney
(keeper of ftp2.cyberspy.com) on IRC. I helped him out a little with
his APE cable. Now, are there any more people interested? Not
interested? Just for informal weekly meetings? If this takes off,
perhaps we could get lucky and have Mike Hohman (still can't spell his
name..) or Bob Puff stop in and update us on their projects... but
this is off in the future sometime. BTW, what is happening at FTe and
CSS now? I haven't heard anything in a long while from either.

Source record: 82425

Hi !

Ivan started this thread because I asked him what the drive (normal
1050) writes to a disk if it receives a format command.

In my ROM-listing of a Speedy 1050 there is a boot-block
that is written to the disk while format-procedure.
At this point we are not sure if a "normal" 1050 makes this, as well.

The whole mess has nothing to do with the DOS. Ivan and I wanted
to know what the diskdrive writes if it gets the format-command.

Actually I think that a normal drive doesn't write boot-sectors
and I'll implement this behaviour.

Bye & thanks for your answers,

Markus

You can check out my task swapper (or better, "context switcher", as
"swapping" implies something different) for the C128 at:

http://ccnga.uwaterloo.ca/~csbruce/bos2.txt

It uses IRQs, which I think are much better suited than NMIs, since you can
simple switch them off during criticial sections, and you don't really need
the responsiveness that NMIs give anyway.

Keep on Hackin'!

Sure! The one and only trading-simulation! I play this game since 10
years, and it never gets boring. I've heard there's a M.U.L.E.-Contest
in the US every year. Does anybody know someting about that?
My only problem playing M.U.L.E. is my damned ATARI 800 XL. This
machine misses two joystick-ports, limiting amount of human-players. I
know, the OS supports 4 sticks. Does anybody know, if there's a way to
connect two more sticks (Hardware)? Or a little IRQ-proggy mapping 3.
and 4. stick to keyboard? Or perhaps mirroring OS to RAM (I did that
once, forgott now how to do that) to rewrite stick3 and
stick4-routines? Help would be great!

Thanx
Philippe

P.S.: to answer me please e-mail, because i dont read this group very

From: Rich Link <ral@iglou.com>
Message-ID: <31DBD704.30C7@iglou.com>
Source record: 82432

While checking out a console for someone else, I apparently killed my 800xl when I tested his power supply. It appeared to be putting out 5vDC as required, but immediately afterwards, I get the green screen, the system goes to black and then the bootup process stops.

Any ideas as to what to check to restore this one? Unfortunately, I never had a spare 800xl (have 800s, 1200xls and a 600xl) and I need the 800XL to use with my MIO/HD. I've already started checking the thrift stores, but I would like to revive this one if possible.

>I can't see the point of loading DOS up just to play games.

There are several AUTORUN.SYS type menu programs that you put on a DOS
disk with binary files and it puts up a menu when you boot up. That
way you can use normal DOS files without having to do L 2:blah etc.
The drawback is that because DOS is on the disk there's less room for
games and it takes longer to load the menu than a boot type menu.

No, the emulators cannot handle APE .PRO files.

>2) APE and XSIO are programs used to send infomration between the two
> computers. APE has the ability to act as a disk drive(s) while your Atari
> is running. I think I understand this. Correct me if I am wrong, or
> expand if I am uninformed. Would one use both of these programs, or would
> you be more likely to pick and choose?

APE can act as up to 8 disk drives [or virtual HD's if you want] and use other devices on your PC such as your modem and printer for the 8-bit. I use APE, and as far as I'm concerned, it's the only choice. APE also supports 2X, Warp 3X, Happy and XF551 speeds, and a load of different densities.

>3) Let's say I have an Atari and I download files from an FTP and transfer
> them over using APE, XSIO, a modem or what have you. Which ones can
> be actually run using your atari? (.DCM? .PRO? .ATR? .XFD?)

If you are using an emulator than .ATR's or .XFD's. If you are using APE and a real Atari you can make use of all of them. .DCM is a compressed 8-bit Atari disk image [Diskcommed]. .XFD and .ATR are formats for storing an image of a real 8-bit disk. .PRO is a method of storing an image of a real copy protected 8-bit disk and will only work with APE.

>4) Lastly. Many things are contained inside a .ARC file. If I recall ARC
> is just an archiving program? Am I correct?

ARC is an old file compression format. ARC is available for both the PC and the Atari [although there are limitations on what can be handled on the 8-bit version].

Fair enough... But let's say you have NO IBM and NO APE. What files can you
d/l with your Atari and use? .XFD? .DCM? .ATR? .PRO? Do you need a program
on the Atari to convert these for use on the Atari? This is where most of my
confusion lies.

Lastly, so the SIO program does essentially what APE does but a little less.
So one or the other is required, not both? Correct?

Thank you very much.

Hi folks!

This was a nice car-racing game for the "little" atari. I enjoyed playing it very much. Unfortunately I sold my equipment. (Yes a few years ago I bought a 130 XE again. Sometimes you have to see the rest of the (computer-) world to decide that the old stuff was good, too. :-)

I don't know about the copyright for Atari stuff. I think Commodore 64 software was declared PD. So if anyone has this game and wants to copy (see above) or sell it to me, please e-mail me.

Thanks in advance

Elmar

I hope you get a solution to this, but I have a feeling that the XL or XE won't be able to handle the other 2 sticks, since memory management for the bank selection schemes in XL and XE computers somehow use what the other 2 sticks used to use in the old 400 and 800. Anyone else?

I have no direct contact with either Mike Hohman or Bob Puff. What I've gleaned about them follows:

Bob Puff is still supporting our machines. He'd really like to move into different areas, and I believe has done so successfully. But he recently had to do another production run of Black Boxes because of the demand.

There is an APB (figurative) out on Mike Hohman, who recently got married.

If anyone else has further information, feel free to chime in.

132. (sorry) More Questions

From: sunlord@zot.io.org
Message-ID: <4rhf2s$jjm@zot.io.org>
Source record: 82443

I am very sorry to bother you all yet again. Although I have a few other questions pending from earlier posts, I figure these questions are better off left answered rather than unanswered. Again, thanks for putting up with these. Like I said originally, it is great getting back into the Atari scene. :)

Questions:

1) Theoretically. Let's say I have an Atari with NO DISKS.
I have an IBM with all these swell programs, like ATARI DOS etc etc.
Is there anyway to make an Atari disk that I can boot my Atari with using IBM without one of those cables. Ie, A program that copies a DISK image directly onto a disk. (Reformats it etc)... In other words, If I have no DOS, No anything on my atari. How do I make a DOS disk... or do I have to send away for one? :) (I am thinking perhaps something like LINUX's LILO stuff. Creates a boot image etc etc)

2) My earleir question still has left me with some confusion. An Atari (by itself) cannot , CANNOT, run .DCM, .XFD, .ATR etc etc. It can run .DCM with Diskcomm. What about those .BIN files I see? Can thsoe be d/l and run on a stand alone Atari, or are they yet again something that needs to be converted? :)

3) If an ATARI cannot run .XFD, .DCM, .ATR, .PRO as they are... how does APE and / or the SIO cable/program allow them to do this. Essentially I thought these just created a virtual perphiral. Do they do some sort of translation on the fly?

I hope these questions don't seem to ignorant. In fact they probably are. But if someone culd take the time to answer them I would be greatly appreciatve.

Thanks!

-
No No No, people, what you do is get a program from Umich that
REPLACES the 3 dos boot sectors (present on every dos formatted disk)
with a MENU program, that DOESNT require dos, it boots the 3 sectors,
the program reads the directory, and it lets you select one of them,
which it then loads. There are at least 30 vaiations of this idea,
some require more than the 3 boot sectors, however. Just format a
disk, don't write dos files to it, then run the menu program. Simple.
And still a lot easier to move files around.

-
-In my ROM-listing of a Speedy 1050 there is a boot-block
-that is written to the disk while format-procedure.
-At this point we are not sure if a "normal" 1050 makes this, as well.
-
-The whole mess has nothing to do with the DOS. Ivan and I wanted
-to know what the diskdrive writes if it gets the format-command.
-
-Actually I think that a normal drive doesn't write boot-sectors
-and I'll implement this behaviour.
-
-Bye & thanks for your answers,
-
Since that is the proper question, I can tell you for a fact that when
a drive gets a format command, it does just that: it formats 40 tracks
of 18 sectors each (or 27 in 1050 enhanced density) and writes all
zeros to each and every sector. AFTER the drive reports that the
format was sucessful, all Dos's write the boot sectors and the vtoc.
But if you issued a "raw" format command from ML, it would simply
format the disk with all zeros. (except Percom drives, which write the
pattern "1A" in each sector, for some strange reason.)

-
-
If you have no IBM, you must only D/l DCM files (Which currently are
not YET in my archive, just ATR's and raw binary files) or binary
files. If you look at the lists on the homepage
http://mars.superlink.net/scharles/ you will see a list of everything
in my archive broken down into boot disks (all ATR at the moment) and
binary files. Unfortuantely, I did not think to sort the archive, it's
all kind of in one big directory right now.
Right now, there are no PRO format files in this archive.

It's in http://mars.superlink.net/scharles/ archive.
That's a good one- C64 copyrights "declared" public domain...
Hey old readers of this group - anyone care to reopen the "dead
copyrights (long) thread?

EVERYTHING is still copyrighted, BUT there is no commercial market for
the product, and the companies involved dont even know if they own the
copy right anymore or not! Several companies have been contacted, with
the thoughts of getting permission to distribute their software, but
most companies are not even sure who owns the copyright anymore.
It's a mess!
At any rate, RDS is there.

For e.g., an .ATR file is a bit for bit image of an atari disk, with a
16 byte header for the purposes of APE/SIO2PC. So when you load the
image with APE it just presents each requested sector of the image to
the Atari just as a 1050 would.

Subject: 0.1) Table of contents

0.1) Table of contents

Introduction
1.1) What is an Atari 8-bit computer?

Usenet
2.1) What is comp.sys.atari.8bit?
2.2) What is comp.sys.atari.announce?
2.3) What is comp.sys.atari.advocacy?
2.4) What is comp.sys.atari.programmer?
2.5) What is comp.emulators.misc?
2.6) What is comp.emulators.announce?

E-Mail
3.1) What is the Info-Atari8 Digest?
3.2) What is INFO-A8?
3.3) How can I retrieve files from FTP sites by e-mail?
3.4) How can I post to Usenet newsgroups by e-mail?
3.5) How can I access the World Wide Web by e-mail?

Software Archives
4.1) What is the University of Michigan Archive?
4.2) What is the Boston Archive?
4.3) What is the PVV Archive?
4.4) What is the ClarkNet Archive?
4.5) What is the Gatekeeper's Archive?
4.6) What is the QACE Archive?
4.7) What is the Polish Demo Archive?

Telnet
5.1) What is the Cleveland Free-Net Atari SIG?
5.2) What is the National Capital Free-Net Atari Users SIG?
5.3) What is the Victoria Free-Net Atari Computer Users SIG?
5.4) What is the Closer To Home BBS?
5.5) How can I access the World Wide Web by Telnet?

World Wide Web
7.1) What WWW pages support the 8-bit Atari?

IRC
8.1) What IRC channels discuss the 8-bit Atari?

File Formats
9.1) What's this UUEncoding stuff (.uu, .uue files) all about?
9.2) What is an .arc file?
9.3) Okay, how about a .dcm file?
9.4) What is an .xmo file?
9.5) What do I do with .XFD and .ATR files?

Emulation
10.1) What 8-bit Atari emulators exist for other computing platforms?

File Transfer Solutions
11.1) What are the best terminal emulators available?
11.2) Can I read/write 8-bit Atari disks on an IBM-PC?
11.3) Can I read/write MS-DOS disks on an 8-bit Atari?
11.4) How do I transfer files using a null modem cable?

Storage Media
12.1) What 5.25" floppy disk drives are available?
12.2) How can I use 3.5" floppy disks with my 8-bit Atari?
12.3) What do I need to connect a hard drive to my 8-bit Atari?
12.4) How can I use an IBM-PC as a storage device for my Atari?

General Interest
13.1) What's the best DOS for the Atari?
13.2) What hardware has Atari created in the 8-bit computer line?
13.3) What are the power-supply requirements for my Atari components?
13.4) What are the pinouts for the...?
13.5) What BBS software can be used on the Atari?
13.6) What version of Atari BASIC do I have?
13.7) What are the Standards for Used 8-Bit Stuff?

Other Documents of Interest
14.1) What vendors, developers, or publishers support the 8-bit Atari?
14.2) Where is my nearest 8-bit Atari BBS?
14.3) Where is my nearest 8-bit Atari user group?
14.4) How do I use my new or emulated Atari?
14.5) What prominent Atarians are reachable by e-mail?

Subject: 1.1) What is an Atari 8-bit computer?

In order of their release, the Atari 8-bit computers include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System. The 400/800 models were first shown publicly in November 1978 and first sold in 1979. The final machine, the XE Game System, was released in 1987. Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

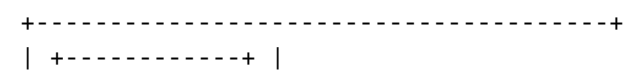
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

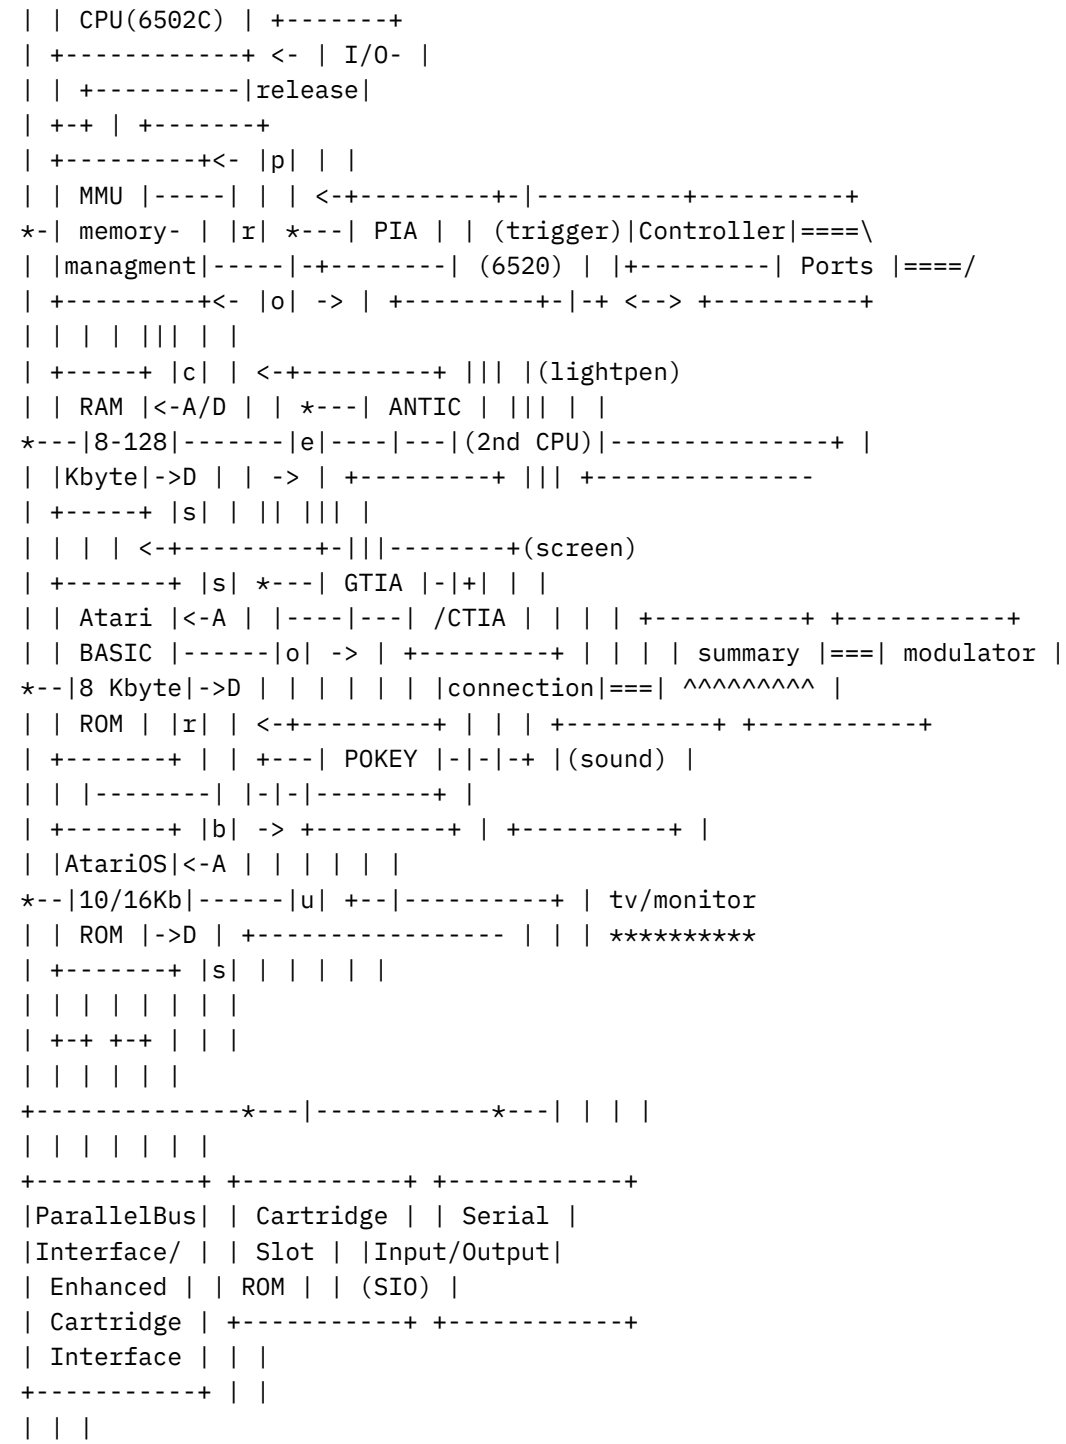
All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to URL:mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement

With thanks to mailto:peter@soemtron.sb.sub.de (Peter)





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES

* RAM: 400/800:8/16/48K, 1200XL/800XL/65XE/XEGS:64K, 600XL:16K, 130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one

* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

Beginners at using the 8-bit Atari platform may wish to contact Bill Kendrick, URL:mailto:kendrick@sonoma.edu , for his Newbie/Emulator FAQ.

The following is taken from Bill's Newbie/Emulator FAQ.
Graphics:
The Atari has maximum resolution of 320 x 192 (standard, non-overscanned screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4, 160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also supported. 40 x 24 x 256-character (128 normal, 128 inverse, character set indirection available) text mode is standard (2 colors).
40 x 24 x 128-multi-colored-character (4 colors per character allowed, the other 128 characters have 4th changed into a color 5) and
40 x 12 x 128-multi-colored-character screen modes are available.
GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only, and 80 x 192 x 9 color screen modes.
Graphics Modes Summarized:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text
2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen modes are available.
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.
All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted

at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

According to Doug Neubauer (by way of URL:mailto:finneganj@delphi.com (James
Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator
A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

CLOCK SPEED OF THE 8-BIT ATARI.
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

[I'd like more system spec's here.]

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group
through URL:news:comp.sys.atari.8bit . This is an unmoderated newsgroup for
discussion about the 8-bit Atari 400/800/XL/XE computing platform. All
postings to comp.sys.atari.8bit automatically appear in the

Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

URL:news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from URL:mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

URL:news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

URL:news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

URL:news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

URL:news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at URL:mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

URL:mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd, URL:mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
URL:mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command to LISTSERV@MARIST, or by sending a message to URL:mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please note that this command must NOT be sent to INFO-A8@MARIST or to info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX INFO-A8" command to LISTSERV@MARIST or by sending a message to URL:mailto:listserv@vm.marist.edu that says "index info-a8". These files can then be retrieved by means of a "GET INFO-A8 filetype" command, or by using the database search facilities of LISTSERV. Send an "INFO DATABASE" command for more information on the latter.

Recent copies are also kept at URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
URL:mailto:ravi@mcnc.org (Ravi Subrahmanyan)
URL:mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin.

Mail the text of your post to:

group.name-news@newsbase.cs.yale.edu
group.name@pubnews.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name@magus.dgsys.com (unverified)
group.name.usenet@hkucs92.air.org (unverified)

For example, to post to comp.sys.atari.8bit, you might send your message to:

comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Be sure to include an appropriate Subject: line, and include your real name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com (Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to mailto:listserv@info.cern.ch (older address) containing the following single line. (What you put on the subject line doesn't matter; blank is OK. This line should go in the text of the message.) You will receive as a reply a simple page intended to help you learn more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of files for many computing platforms, including the Atari 8-bit computers. For more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich Archive. The Archivists request you use these mechanisms in this order of preference:

1) The number one way to get into the UMich archives is via AFS. If you have AFS, all our files are kept in the directory "/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT! Specifically, use:

URL:file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software Archives" choice. Specifically, use:

URL:gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
URL:gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
URL:gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
URL:gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/ Specifically, use:

URL:http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
URL:http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory. Specifically, use:

URL:ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are several mirror sites which are all updated from the home site regularly:
URL:ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
URL:ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
URL:ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/

URL:ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
URL:ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
URL:ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You might also suggest what permanent 8bit subdirectory you'd like your file to end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less) and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please name the parts in the subject line. This is really helpful as the parts usually don't arrive in the proper sequence. Also, please include a message labeled "file transmission," containing a short description of the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to have seen no uploads for years, but there are some files here that aren't on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no (Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate directory. Please include a readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson, mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock: ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, URL:mailto:sup8pdct@closer.brisnet.org.au for more info.

URL:ftp://203.4.149.98/8bit

Subject: 4.7) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only) on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

URL:ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National
Public Telecomputing Network. It can be accessed by any of the following:
telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or
telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are
automatically members of the official Atari user group C.A.I.N. - Central
Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains
the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari
Community E-Mail Directory" listing. Send correspondence and press
releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.3) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide assistance with XL/XEs, STs, and Falcons, whether you are a new or experienced user.

Subject: 5.4) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.5) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100 terminal. Log in as www. Does not allow users to "go" to arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on your system if your administrator has not done so already. The best plain-text browser, so move mountains if necessary to get your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest of the world. The line mode browser, plus extra features. Log in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

8-bit Vendor/Developer home pages are listed in the Vendor/Developer list, not here.

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if they have gotten that far -- are familiar with IRC, :) and select one of the servers and join #atari8. There is many IRC servers on EFnet, chances are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into 100% printable ASCII characters, so that the file may be posted or e-mailed anywhere a text message can go. The 8-bit Atari is perfectly capable of UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that is common in the MS-DOS world. This is done to make the file shorter, so it takes up less space on your disk and it takes less time to transfer between computers. The archives contains several 8-bit Atari archivers fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert entire disk images into files. To work with .dcm files on the Atari you'll need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

Subject: 9.5) What do I do with .XFD and .ATR files?

These are two standard formats for Atari disk images used by the various Atari
emulators running on other types of computers.

The .XFD format originated with the ST Xformer emulator;
the .ATR format originated with the SIO2PC utility.

Preston Crow keeps a small site filled with the latest utilities for
manipulating Atari disk images with non-Atari computers:

URL:ftp://ftp.cs.dartmouth.edu/pub/crow/atari/

Subject: 10.1) What 8-bit Atari emulators exist for other computing
platforms?

These are the five emulators that are usable.

1) ST Xformer 3.0, from Branch Always Software, for the Atari ST.
URL:http://www.halcyon.com/brasoft/

2) PC Xformer 3.5, from Branch Always Software, for MS-Windows.
URL:http://www.halcyon.com/brasoft/

3) Rainbow, by Chris Liam, for the Macintosh
URL:mailto:lamcw@aston.ac.uk
URL:http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari800 Emulator for Unix and Amiga, by David Firth
Latest version: 0.4.2
URL:mailto:david@signus.demon.co.uk
URL:ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

5) XL-It! 0.12, by Markus Gietzen, for MS-DOS
URL:mailto:magi@stud.uni-sb.de
URL:http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

---

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM

Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.7 XE (128K) or 1.1 (48K) by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download

Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
available from mailto:brucka@eruvin.jct.ac.il

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad M.Kokoszkiewicz (KMK), mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050 drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be used to read/write to a hard drive connected to an MS-DOS system. This can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the companion vendor/developer list) allow the Atari XF551 disk drive to read 720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software Services (see the companion vendor/developer list), allows both low density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard floppy drives to be used on the Atari. A utility is included to read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into

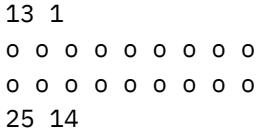
the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.



(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed but also pins 4 and 5 as well as 6 and 8. Or better yet, make a true 25 wire, straight through cable and use a commercial null modem. A commercial null modem is just a small device with the correct lines already crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.

ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.

Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.

Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition
(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE
computers (and other, those have such connector). Tested with various
Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50,
SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications,
demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC
printer or to a file on the PC. High speed drives are emulated (a la US
Doubler).

All these functions are transparent at the Atari end; you never notice the
difference between SIO2PC and regular drives, except that the SIO2PC drives
are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 4.13 is shareware by Nick Kennedy.

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige & black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801

1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:
1010
9 V AC 15.3 VA (1.7 A) Atari#CO14319 transformer:
400,800,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA014748 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA016804 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 31 VA (3.4 A) Atari#CO17945 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551
9 V AC 50 VA (5.6 A) Atari#CA017964 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551

9.5 V AC 40 VA (4.2 A) Atari#CO61636 transformer:
1027

24 V AC 3.6 VA (150 mA) Atari#CA016751 transformer:
830

5 V DC 1.0 A (5.0 W) Atari#CO70042 adapter:
65XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CO61982 adapter:
600XL,800XL,65XE,130XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CA024814 adapter:
600XL,800XL,65XE,130XE,XE Games System
5 V DC ??? A (??? W) Atari#CO81982 adapter:
XL/XE

6 V DC 300 mA (1.8 W) Atari#??????? adapter:
"410P"

9 V DC 500 mA (4.5 W) Atari#CO16353 adapter:
XEP80,SX212,2600
9 V DC 500 mA (4.5 W) Atari#CA014034 adapter:
XEP80,SX212,2600

9.3 V DC 1.93 A (18 W) Atari#CO18187 adapter:
Indus GT,5200
11.5 V DC 1.95 A (22 W) Atari#CA019141 adapter:
Indus GT,5200

5 V / 12 V DC 1.1 A (5.5 W / 13.2 W) Atari#CO62297 adapter:
1400XL,1450XLD

These draw their power from the SIO +5 V:
XM301 (60 mA),XC12,ICD/FTe P:R:Connection

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410,815,820,825,1025,1029,XMM801,XDM121

The power supply requirements for the following are still needed:
??? V DC ???? A (???? W) Atari#CA060535 adapter:
835

XC11 program recorder (no brick needed -> internal or SIO source?)

OTHER:
The ICD/FTe Multi I/O (MIO), all versions, can use both AC and DC supplies. But stick to voltages of at least 6.2-7.2 V.

Subject: 13.4) What are the pinouts for the...?

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed

in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM

terminal program of days gone by. I am not familiar with this program. I think that it is written in Action! and only supports XMODEM Checksum transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial programs. I haven't heard anything about OASIS IV and CARINA for a while, but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A

234 C

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original

manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled,
contains worn parts or minor scratches/dings that betray heavy
service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories;
heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals &
accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit
Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest
version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev

From: sunlord@io.org
Message-ID: <jv12xoAhYxTC089yn@io.org>
Source record: 82508

Please excuse the following barrage of stupid questions, but if you could please take the time to answer them (or refer me to a place where they may be answered), I would be greatly appreciaitve.

I have been scanning this base for awhile now, and have managed to take a look at a few of the programs discussed. Following is a bunch of (perhaps) seemingly stupid questions.

1) Xlit and Xf252 (and xf3.5) are the major EMULATORS. They can run .ATR and .XFD files. My question is, what can run APE .PRO files?

2) APE and XSIO are programs used to send infomration between the two computers. APE has the ability to act as a disk drive(s) while your Atari is running. I think I understand this. Correct me if I am wrong, or expand if I am uninformed. Would one use both of these programs, or would you be more likely to pick and choose?

3) Let's say I have an Atari and I download files from an FTP and transfer them over using APE, XSIO, a modem or what have you. Which ones can be actually run using your atari? (.DCM? .PRO? .ATR? .XFD?)

4) Lastly. Many things are contained inside a .ARC file. If I recall ARC is just an archiving program? Am I correct?

Very sorry about these questions. I have had an Atari 130XE and an IBM... never did I think you could hook them together. I am interested in doing just this, and also in getting software for my Atari from the FTP sites, and be able to run it (hence questions 3 and 4). Thank you very much....

Again, if you could take the time to answer these I would appreciate it.

-
Mark, I spent most of the last week REMOVING stuff from Multi-boot
menus that you sent me! Multi-boots! Yuck!
Multi-boots are for people who can't make dos loadable files (or are
too lazy to). At any rate, I use a MENU program that loads regular dos
files (Which, I think you'll agree, are a LOT easier to copy,
especially since they have sector links)

get yellow and black lines flashing across the screen to inform you
of a load error.

It may be that the version you have is corrupt as the DOS file version
has been hacked. The original (boot disk version) works great on either
a real 800XL or on the XL-it emulator. It doesn't work at all on any of
the PCXformer emulators!

--------------------snip-----------------
: Notice that normally the 6502 address space is full
: with additional memory (if available) banked in by an external
: memory management arrangement. So if the 6502 *had* 'boundary
: errors' it would be pointless -- I believe the Andre's original
: 6502 box had memory banking on 4K boundaries (is that right?)
Yes you are right. The upper 4 address bits were taken as index
into 16 registers each 8 bit wide. So I had 16 chunks of memory,
each 4kByte in size.
These could then be mapped to any of 256 chunks within the
extended up to 1MByte memory.

--------------------snip-----------------
In my original design, the memory pages from other processes just couldn't
be accessed, as they were not mapped in. (As I explained in another
post). A process with 8kByte RAM just had access to 8 kByte RAM
and the rest of the address space would be mapped into some read-only
regions (well, I used the kernel image...)
So that the process can just change it's own RAM.

That's even a way to implement paging, i.e. put a process out on disk
if memory is short. Only one thing, as you mentioned, has to be taken
care of: The 6502 cannot detect memory faults, so that _all_ memory pages
belonging to the process must be mapped and accessible when it is run.
(Even if there were some hardware mechanism to detect the fault,
there is no way to restore the original register values as before the
trapped memory access - which is essential to correctly re-execute
the offending opcode after the page has been loaded.
The capability to restore the register values was one of the few
improvements of the Motorola 68010 CPU above the 68000.)

--------------------snip-----------------

Well, I'm using the timer interrupt. But then I use the IRQ timer.
A disadvantage is, that 'nasty' programs can take full control over
the machine. An advantage is that the system itself cannot be
interrupted when doing critical routines. Well, that could have been
taken care of with a flag (to immediately return from NMI) but

I thought it was easier this way.

And as I wanted to run close-to-hardware processes on the machine, I
wanted a process to be able to protect itself from task switching.
(for timing critical hardware handling)
Which is obviously easier when just doing a SEI instead of
calling some StopMultiTasking or RestartMultiTasking (as the Amiga does)
to access some kernel internal flag - which is not available in the
process memory.

149. Various SIO2pc cables

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-05 00:00:00 UTC
From: eru@sover.net
Message-ID: <31dcf8c6.16439428@news.sover.net>
Source record: 82365

I had asked a quesion about the most reliable type of cable for the
APE and sio2pc programs before, and did not get the answer I was
looking for, but, I figured it out myself in the end:

The "other" one chip version used a 7400 chip, which was my confusion.

I am now wondering, do the pro cable and new one chip version Ape
cable use the same chip? One schmatic has a "c" in the middle of the
chip number, and the other doesn't.

BTW, for all those wondering which colors go to which pins, I have
found on mine that:

1 - Brown
2 - Pink
3 - Orange
4 - Black
5 - Dark Green
6 - Bare
7 - Light Green
8 - Yellow
9 - Light Blue
10 - Dark Blue
11 - White
12 - Red
13 - Gray

I haven't looked there, but that is probably true. You'd have to
boot a DOS boot dosk for this info to be in these locations, first,
though. It would be different for different DOSes too.

Download (FTP) the file INDEX0. It has the complete archive index.
You can print it out at your leasure. When you go back in to the
archive, just tell it what directory and file(s) you want to FTP and it
should work fine.

No! The scan frequency of NTSC is 60Hz vert. 15750 Hz Horiz. PAL is
50Hz vert. and ? Horiz. You'd need some way to convert the video info
to this scan frequency set. The graphics resolution is a bit different
too.

Bzzt: Not quite right!

It's down to your TV set - most modern PAL sets seem to be engineered
well enough to handle the signals if you put an NTSC cart in a PAL
2600. Also, it will *always* work on a black and white PAL TV -
something to do with the way YIQ rather than RGB is decoded, I think.

The practical upshot of which is - most of us UK collectors have many
NTSC carts in our collections that we have gained from cross-atlantic
trades.

Cheerio,
Ross

ps. I'd been told that Colecovision NTSC and PAL carts are merrily
interchangeable. I have tested a few 7800 ones and found that some
NTSC carts seem to crash on PAL systems.

pps. Not that I care any more, cos I've got a PAL/NTSC/SECAM/Anything
else you can think of monitor ;-)

>once, forgott now how to do that) to rewrite stick3 and
>stick4-routines? Help would be great!
>

It's not that Atari just removed two of four joysticks for the hell of it.
They used PORTB (the hardware port that handled the extra sticks) to implement
built-in BASIC, Self-Test ROM, the extra 16K of RAM under the OS (bringing total
RAM up to 64K), and later for the extra 64K of RAM on the 130XE. So, if you were
to rewire PORTB to handle two extra joysticks you would be hosing all of those
features, and you'd still have to load the XL-Fix every time you used your now 48K
computer.

Probably the best and most painless way to get four sticks hooked up is to buy an 800.

Hope this helps...

-Michael Ellis

Youl'll find That, and other cool demo's, like "To kill a commodore,
and Apple Kill" on one of the demo disks at:

ftp://ftp.servtech.com/pub/users/mead/atari8/demos

Ballsong: CESdemo.zip
Ballsong2: Specter.zip

Both are on an ATR image.

Dave

In a previous article, iig05-1@htw.uni-sb.de (Markus Gietzen) says:

>Hi !
>
>Ivan started this thread because I asked him what the drive (normal
>1050) writes to a disk if it receives a format command.

In case nobody answered, when a 1050, 810 or other stock drive receives
a FORMAT DISK command it performs a low level format of the disk, laying
out tracsk and sectors as instructed by its ROM.

No data is put on the disk. After the format is finished, DOS performs
writes that create the boot sectors, directory, VTOC, etc.

>In my ROM-listing of a Speedy 1050 there is a boot-block
>that is written to the disk while format-procedure.
>At this point we are not sure if a "normal" 1050 makes this, as well.

The speedy 1050 might be _able_ to write boot sectors, but if used
with a normal DOS (ie. not a special dos for Speedy drives) these
boot sectors would be overwritten.

>The whole mess has nothing to do with the DOS. Ivan and I wanted
>to know what the diskdrive writes if it gets the format-command.
>
>Actually I think that a normal drive doesn't write boot-sectors
>and I'll implement this behaviour.

No, drives do not write boot sectors, except as instructed to do
so by dos, and then its just a normal write.

DOS format goes like this:

Configure Drive (single/double)
Format (or ED format for 1050 ED)
Wait for format finish
Write boot sectors
Write directory
Done

Definately the most painless, but for those so inclined there is a mod
to piggyback PIA chips, and get an extra four (or more depending on
how _many_ PIA's you stack..) joyports. This is perhaps the most
underrated hack there is, I think, as the number of things you can do
with it are huge (Of course! It's a PIA!! :)

I forget Ivan's last name. But Yogi says Ivan is the author of
'Tail' of the Beta Lyrae. Now, if memory serves, Phillip Price
was on here and said he wrote that one on a 400 with a cassette
tape while living in the boonies on a beach in a hut.
It isn't 'Tail' it is 'Tale'. I hope I get corrected if any
of this is incorrect.

If you have just an Atari computer, it would be easy to write a program
that converts XFD or ATR files to disks. The only problem is that these
files are not compressed, so you need a drive big enough to hold the
files.

(Yogi says Ivan authored 'Tail of Beta Lyrae'.)
I thought Phillip Price (on csa8) said he wrote that on a 400
and cassette while living in the boonies on a beach in a hut.
(Pardon if I'm wrong, just would like to know.)
So, I had my 8-bit set up today. Beta Lyrae loads from $3480
to $B00F mostly. Hmmm. It might (the one I have) load from
DOS. DOS is mostly $700- to about $2000.
Anyways, the one I have loads on 800xl and 800xl with Omnicom.
I do have a note on the disk label that says (800), which usually
means it requires at least a translator.
'Ducks Ahoy' that I have is the only one I can remember that
must have an actual 800, no translator or Omnicom.
(All you sissies, REAL MEN use my transfer program, I used it
today to get something over to my pc and, after a bunch of
hassles, got it to work. I DIDN'T EVEN SCRAMBLE MY FAT,
(of course it is a little early to say that for certain
nothing got scrambled.)

To: ALL ATARIANS
From: shuffman@ideanet.doe.state.in.us, STU HUFFMAN
Subj: Crowd Builds for MIST VIII on July 13

We're expecting another outstanding crowd
-- and a full house -- here in Indianapolis
from 10am to 3pm (Indiana time) on Saturday, July 13,
at the Mid-Indiana MIST AtariFest VIII.

In fact, we want to alert you that the house
may be truly and fully packed because
of last-minute decisions by vendors and
user groups. When our June 15 "discount date"
came and went, we had to decide to give up our
second ballroom (or risk a hefty loss). So we
are once again back in only one crowded room.

But we expect it will be real cozy -- and busy fun!

Atari Corp. has sent us a complete JAGUAR
to sweeten the pot ... along with a half-dozen
Jaguar games. All will either be given away as
door prizes or offered for sale at auction.
More door prizes are to be awarded also.

Who's coming for sure? Here is the list of those
who put checks in the mail. Others have expressed
interest and may show up -- but we are rapidly
running out of room:

Toad Computers ICD, Inc.
SKWare One Computer Dungeon
Current Notes It's All Relative
Systems for Tomorrow chroMAGIC
Crawly Crypt

Toronto Atari Federation EAUG
SCAT LAG
Nashville Atati User Group LACE
ACORN Purdue AUG
BL.A.ST. ASCII

Admission tickets are the same $3 as in the past,
and entitle the buyer to a chance at the door prizes.

See you there:

Best Western Waterfront Plaza Hotel,
US 136 (just west of I-465 and I-74) on northwest corner
of Indianapolis.

> directly onto a disk. (Reformats it etc)... In other words, If I have no
> DOS, No anything on my atari. How do I make a DOS disk... or do I have to
> send away for one? :)

You want to create a boot disk, from your PC, but use no cable? Not
possible since the PC floppy controller cannot write disks compatible
with atari drives.

You could use a PRO cable to write an image out to a 1050 disk drive, but
there is that naughty cable again.

> (I am thinking perhaps something like LINUX's LILO
> stuff. Creates a boot image etc etc)

I know what LILO is, but I have no idea what you mean by this :)

>2) My earleir question still has left me with some confusion. An Atari (by
> itself) cannot , CANNOT, run .DCM, .XFD, .ATR etc etc.

You atari, by itself can run binary files residing on real atari disks. The
above refrences are to DISK IMAGES on a PC.

> It can run .DCM
> with Diskcomm. What about those .BIN files I see? Can thsoe be d/l and

> run on a stand alone Atari, or are they yet again something that needs
> to be converted? :)

A DCM is a WHOLE COMPRESSED DISK, compresses into a file. It cannot 'run'
them, but you can uncompress them into boot disks.

A .BIN file is a binary load file (probably). You need to place them on
a disk, and load them from Atari DOS.

>3) If an ATARI cannot run .XFD, .DCM, .ATR, .PRO as they are... how does
> APE and / or the SIO cable/program allow them to do this. Essentially
> I thought these just created a virtual perphiral. Do they do some sort
> of translation on the fly?

Yes and yes. Read the ape docs at http://www.nacs.net/~classics for more
information on how to use APE.

>I hope these questions don't seem to ignorant.

>But if someone culd take the time to answer them I would be greatly
>appreciatve.

Most people are very confused by the concept and use of 'disk images' the
first time they come across them, so dont be so hard on yourself. Check
out the above suggestions and the APE docs and if that does not
help, just e-mail me back and ill see what I can do to help explain any
parts you dont understand.

Thanks

```
Big John's "NO BULLSHIT" Auction

UPDATE # 7 7/4/96

Happy 4th of July. Hope nobody lost any fingers. Kind
of hard to play games that way :)

Still having some slight mail problems but things seem
to be clearing up. Remember, if you send in a bid and
don't get a response from me, it means I probably
didn't get it. I acknowledge all bids, so if you don't
hear from me, please re-send your bid.

Please note that the INTV keyboard is a computer
keyboard and not a music keyboard. Also, even though
the system is PAL, it will work with U.S. systems if
you use a U.S. power supply.

If you wish to be added to or removed from the auction
mailing list, just drop me a line.

Standard rules are listed at the end of the auction. Please
read them before bidding. Updates will be made daily in
e-mail, less frequently in the newsgroups. If you have any
questions, please feel free to e-mail me.

On to the goodies. Enjoy!
-----------------------------------------------------

- Cosmic Swarm (Atari 2600) $30 WDV
(by Commavid, New in Box,
Mint Condition)

- Super Cobra (Intellivision) $60 kujo
(by Parker Bros., New in Box,
Shrinkwrapped)

- RCA Studio 2 system $17 Rikard
w/ Blackjack cartridge
(untested, no power supply/switchbox)

- Prototype Moon Patrol cart $20 WDV
(Atarisoft for the C=64)
label reads: Commodore 64
Moon Patrol
Atari Inc. Proprietary
```

Serial No. 92
1983 Atari, Inc. All Rights Reserved

- Intellivision ECS Computer $27 Rikard
Keyboard (rare, brown version. PAL,
220V. Complete.)

- Emerson Arcadia 2001 w/ $22 Rikard
2 carts (Missile War & Alien
Invaders) Complete.

- Atari 2800 Cookie Monster $55 mercury
Munch (New in Box, Shrink-
wrapped). This is a beauty. All Japanese writing
and Atari 2800 logo. I've only seen two of these
and I'm keeping the other one.

- Amiga Joyboard (2600) $15 DaveT
(compatible with Mogul Maniac,
Surf's Up, and Off Your Rocker)

- Demond Attack (2600) $20 JeffGamer
(NTSC, unknown origin)
Not a mistake on my part, there is a "D" at the
end of Demon. Completely different artwork than
the Imagic release.

- Tutankham (Intellivision) $55 miester
(by Parker Bros., New in Box,
Shrinkwrapped)

- Prototype Swordquest: $25 WDV
Earthworld cart (Atari)
Standard loaner cart label.
Cart reads: Adventure II, which is crossed out
and has Swordquest written beneath it.

- Frankenstein's Monster (2600) $27 JeffGamer
(Prototype/New Release cart)
Cart has red label w/ Data Age logo and serial
no. 0123. Also has copyright info and "Please
return to Data Age" text. Cart has slight wear
and screwholes.

RULES
****

1. Auction runs until July 9, at which time it will
change to a Once, Twice, Sold format.

2. Minimum bid increments are as follows:
-- $1 on items up to $20
-- $2 on items over $20
-- $5 on items over $100

3. In case of a tie, the first bid that I receive will
be designated as the high bid.

4. Payment is to be by personal check or money
order. Shipping will be based on what you win.
I will send shipping info with your winning total.
If you have questions about shipping, please
e-mail me.

5. I reserve the right to stop this auction, alter the
rules, withdraw items for trade, or make any
other changes for any reason.

6. Send bids or requests to be added to the
mailing list to jhardie@usa.pipeline.com

Thanks for reading and good luck!

ntsc and pal systems are the same, it's the cartridge that defines the
sync rates, etc. only the video encoder differs.

This is why I want to organize meetings. What Day/time is best for
you? I have been trying to get a consensus for awhile now. Also,
join #atari for all sorts of atarians. Often there are 8-bitters
there, but the conversation usually revolves aroun the ST and later
lines of Ataris.

176. Re: Atari 850

Source record: 82458

Funny, every time I have seen a disk drive for the 64 or 128 (i.e., 1541, 1571, 1581, FD-2000, etc.) they have always had two ports...one for the cable coming from the computer or previous peripheral, and one going to the next peripheral.
-
In fact, I have not only seen it, I've done it; my C-128 runs with two drives (a 1571 and 1581), and a printer interface all daisy-chained thru to the DIN-6 serial port on the back of the computer, the same way my 1050, XF551, and P:R:C are daisychained to the same port on my 1200XL.

177. Help! ATR/XFD files

Newsgroup: comp.sys.atari.8bit

How can I convert ATR files to XFD format? I tried IMAGEMAN
but it seems very limited in the ATR files it is capable of handling.
Seemingly all disks without DUP/DOS will not convert.. any help/ideas?

Thanks!

When I put my 130xe in a pc case w/ pc power supply, I also get the
"green screen". But pressing reset works and the boot process
continues. This turned out good for me, because it gives my hard
drives a chance to spin up, with out modifying my atari with the
"freezer" modification or somesuch. In any event, I have no idea what
could cause this green screen, except that the amperage rating is way
above the normal Atari power supplies. Also, in my system is a BB
also powered by the PC PS. Perhaps the BB doesn't get power exactly
at the same time the Atari does, which might cause my "problem". Hope
this helps maybe a little. (Any input on my odd occurance?)

181. APE/SIO2PC imact on hardware vendors and MARS-8

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-05 00:00:00 UTC
From: eru@sover.net
Message-ID: <31dce3fc.11117355@news.sover.net>
Source record: 82463

Anybody know how the release of SIO2PC and then APE affected the sales at especially CSS and FTe (then ICD probably, how long has SIO2pc been around now?) I'm not so sure I would have bought a Black Box if I had had a PC and SIO2PC when I made that purchase. (Although the BB/FB continues to be more than well worth the investment, at least for me). Perhaps the remaining hardware developers shold concentrate on moving in totally new directions, like the Mars-8 project from FTe. (BTW, what's the status on this???)

Other things I'd like to see include a VGA hack/mod, (see if I can't cut down on the number of monitors on my desk. :), and a new Atari motherboard design incorperating the following things:

HD interface, either scsi or IDE
Ram in simm modules
standard floopy drive support
Transkey
65816 processor
2 bios' switch selectable, w/support for more via flash upgrading
Stereo upgrade mod (w/max #of pokey's (4?)
multiple PIA mod w/max # of PIA's)
PC standard power connecter
baby-AT form factor, so it fits in any pc case

perhaps through in some of the video circuitry of a 7800 for fun..
who knows!!

If I get a chance to at college, I'm going to build myself one of these!! Who else would buy one if they were put into production?

Rick

Very soon: all it takes is 50 years after the author's death (or 75 years
if a corporation owns the copyright). The copyright law was changed in
the late 1970s and doesn't apply to old movies like "IAWL".

186. ATR & XFD Images to 1050 floppy disk

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-06 00:00:00 UTC
From: Sergey Zakharov <szakharo@ix.netcom.com>
Message-ID: <31DEE120.363@ix.netcom.com>
Source record: 82270

I would like to able to transfer ATR & XFD images of boot disks (not with any DOS on them) from the PC to the Atari 1050 or Indus GT disk drive to use with my real Atari 800 & 130XE (NOT emulators). I currently own PCXformer 3.50 with the Xformer cable. I am able to do transfers of Atari floppy disks that I own to ATR and XFD disk images by using an old sector copier that I typed in years ago from Antic magazine called Copymate. I use the following command when running PCXformer 3.5: xformer -8 -a -j -n -x:1994 d1:(this is the 1050 with my sector copy program) diskimage.xfd. The sector copier then boots and runs from the 1050. I set the source drive as drive 1 and the destination drive as drive 2. All works fine, but if I try to do the opposite, PCXformer crashes.
Can this be done with my existing hardware & software or do I have to go the SIO2PC route? Any help will be GREATLY appreciated.
Sergey

All of the software is still copyrighted and is just posted to FTP so that people can share it. Only things I know for sure is anything marked "Public Domain" and Caterpiggle (which was released by the author to the PD). I believe whomever owns the copyrights to the games in the archives would have a hard time proving that we are costing them money by d/l......

The fellow who wrote the original, Paul Shirley, is still in the business and still hangs out over in comp.lang.forth. I asked him about the games he worked on some time back and he was none too happy about the poor marketing SpinDizzy received and really didn't want to talk about it. His name was also on the Super Nintendo update--SpinDizzy Worlds--that came out around 1992.

For the record, I don't know if Mr. Shirley originally wrote the game for the C-64 or the 800.

I dunno,the new SpartaDOS 3.2g is really anoying.
They got rid of the "copying a file to it-self" problem by not letting you
use the same filename for source and destination.
Even something like "COPY FILE.EXT >FILE.EXT" doesn't work.
Nor does "COPY FILE.TXT E:" for viewing files since the CP translates that
into "COPY FILE.TXT E:FILE.TXT".
Also;still no default drive like MyDOS and SpartaDOS X have.
(I love my SDX cart!)

196. MyDOS:running out of memory

Newsgroup: comp.sys.atari.8bit

Source record: 82280

If a game doesn't seem to work or BASIC gives you error#2 then you might have MyDOS eating up too much memory.

MyDOS uses file buffers that are 256 bytes (for MFM/256 mode) but no disk buffers (which you set with memory location 1802).
Still it uses up more memory than stock AtariDOS.You can decrease memory by going into DUP (the "DOS menu") and pressing "O" for options and then press [return] when it asks for a drive number.Then answer the following question the way you want but specify 2 or 1 for file buffers (the default (3) is specified if you just press return).
You can do this from BASIC (or whatever) with "POKE 1801,1".
You need at least three buffers to copy files.

: As part of the FMS of DOS, there is a machine language program that
: can write to this part of the disk. It has specific information and
: format. SpartaDOS disk versions also have this program seperate as
: BOOT.COM. At the DOS prompt, you type BOOT file2but.com <cr> and as
: loong as it has bootable infor in the file, it will boot and run.This
: is one way to create SD3.x disks if you only copy X32D.DOS to the disk
: after format (not during the format process). It would be BOOT X32D.DOS
: <cr>. That's also provided you started you system in SpartaDOS 3.x.

uh,what SpartaDOS are you using?
Every SpartaDOS since version two has had the BOOT command built-in.
You can even do it from BASIC with a XIO command.
(i.e.It's built into DOS it-self)
Since version one doesn't store DOS as a file,it must not have a BOOT XIO.

: -Hi !
: -
: -Ivan started this thread because I asked him what the drive (normal
: -1050) writes to a disk if it receives a format command.
: -
: -In my ROM-listing of a Speedy 1050 there is a boot-block
: -that is written to the disk while format-procedure.
: -At this point we are not sure if a "normal" 1050 makes this, as well.
: -
: -The whole mess has nothing to do with the DOS. Ivan and I wanted
: -to know what the diskdrive writes if it gets the format-command.
: -
: -Actually I think that a normal drive doesn't write boot-sectors
: -and I'll implement this behaviour.
: -
: -Bye & thanks for your answers,
: -
: Since that is the proper question, I can tell you for a fact that when
: a drive gets a format command, it does just that: it formats 40 tracks
: of 18 sectors each (or 27 in 1050 enhanced density) and writes all
: zeros to each and every sector. AFTER the drive reports that the
: format was sucessful, all Dos's write the boot sectors and the vtoc.
: But if you issued a "raw" format command from ML, it would simply
: format the disk with all zeros. (except Percom drives, which write the
: pattern "1A" in each sector, for some strange reason.)

1050 drives with the "Duplicator" chip and Trak drives also put
"uniform garbage" into the formatted sectors as well.

: > you be more likely to pick and choose?

: APE can act as up to 8 disk drives [or virtual HD's if you want] and use other
: devices on your PC such as your modem and printer for the 8-bit. I use APE,
: and as far as I'm concerned, it's the only choice. APE also supports 2X, Warp
: 3X, Happy and XF551 speeds, and a load of different densities.

: >3) Let's say I have an Atari and I download files from an FTP and transfer
: > them over using APE, XSIO, a modem or what have you. Which ones can
: > be actually run using your atari? (.DCM? .PRO? .ATR? .XFD?)

: If you are using an emulator than .ATR's or .XFD's. If you are using APE and
: a real Atari you can make use of all of them. .DCM is a compressed 8-bit
: Atari disk image [Diskcommed]. .XFD and .ATR are formats for storing an

Diskcomm files are not compressed,so you should ARC them as well.
They just don't store sectors that are empty.
So if you un-Diskcomm a file and plan to be able to re-Diskcomm that disk
later to give to someone,you should format it first with a normal disk
drive (no 1050 Duplicator,Percom,nor Trak drives),which Diskcomm will do
for you.This will make sure that un-used sectors are blanked.

: Sure! The one and only trading-simulation! I play this game since 10
: years, and it never gets boring. I've heard there's a M.U.L.E.-Contest
: in the US every year. Does anybody know someting about that?
: My only problem playing M.U.L.E. is my damned ATARI 800 XL. This
: machine misses two joystick-ports, limiting amount of human-players. I
: know, the OS supports 4 sticks. Does anybody know, if there's a way to
: connect two more sticks (Hardware)? Or a little IRQ-proggy mapping 3.
: and 4. stick to keyboard? Or perhaps mirroring OS to RAM (I did that
: once, forgott now how to do that) to rewrite stick3 and
: stick4-routines? Help would be great!

Actually,the OS wouldn't let you use four joysticks because the positions
(and fire buttons) that the OS presents to programmes for the second two
game ports is identical to what is coming in on the first two.
(of course programmes that bypass the OS wouldn't see this)
The lines for the second set of joysticks (called PORTB) controls other
thins in the 800XL. (and the 1200XL uses them for a different purpose also)
I don't know what happened to the fire button inputs for the second two ports.
(PORTB read the joystick possitions only)

Sergey Zakharov (szakharo@ix.netcom.com) wrote:
: I would like to able to transfer ATR & XFD images of boot disks
: (not with any DOS on them) from the PC to the Atari 1050 or Indus GT
: disk drive to use with my real Atari 800 & 130XE (NOT emulators). I
: currently own PCXformer 3.50 with the Xformer cable. I am able to do
: transfers of Atari floppy disks that I own to ATR and XFD disk images by
: using an old sector copier that I typed in years ago from Antic
: magazine called Copymate. I use the following command when running
: PCXformer 3.5: xformer -8 -a -j -n -x:1994 d1:(this is the 1050 with my
: sector copy program) diskimage.xfd. The sector copier then boots and
: runs from the 1050. I set the source drive as drive 1 and the
: destination drive as drive 2. All works fine, but if I try to do the
: opposite, PCXformer crashes.
: Can this be done with my existing hardware & software or do I have to go
: the SIO2PC route? Any help will be GREATLY appreciated.

You can use imageman to extract files from single and dual ("enhanced")
density MyDOS (amd,hence,AtariDOS) disks.
If you want to get files from boot and SpartaDOS disks you'll have to use
Diskcomm under the emulator to create a Atari-useable disk image.

Try this- Load both netscape AND notepad at the same time. Use
notepad to key in your message. Highlight the entire message body,
and pulldown on edit and choose copy. Then, open up a new message
with netscape. Pull down on edit and choose paste. You just
copy/paste between applications, bypassing the problem inherent with
attaching/importing a file.

206. How can I convert ATR & XFD images to 1050 5.25 floppy disk?

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-06 00:00:00 UTC
From: Sergey Zakharov <szakharo@ix.netcom.com>
Message-ID: <31DF4591.69CA@ix.netcom.com>
Source record: 82290

Just in case I was'nt too clear on my previous post, here's my problem put simply: I have an IBM PC compatible with access to ATR and XFD files of boot disk games. I want to convert these PC ATR & XFD files back to my Atari 1050 disk drive and put them onto 5.25 Atari floppy disks (boot disks) to run them on the Atari 800/XL/130XE computers that I also own. I don't want to use an emulator, I want to use my REAL Atari computer and my REAL Atari 1050 disk drive to run these games, because to me, the current emulators availible just don't do the job as well as a REAL Atari! I currently own PCXformer 3.50 and the PCXformer cable. I am able to convert 1050 floppy boot disks to XFD and ATR files to the PC, but not vice versa. Can this be done with my current hardware/software? If possible, please include links or places where I can get the needed software.
THANK YOU!!

Me Again, I found the text file of a web page I found ont the net. So I've decided to upload it here for everyone.Copyright Information

A Guide for the Protection of your Creative Works.

What is a Copyright? copyright is a property right in the expression of an
idea, whether published or unpublished. A copyright establishes ownership of
original works of authorship fixed in any tangible medium of expression...
How is a work "fixed" in tangible form? A fixed work may be handwritten or
typed; dictated into a tape recorder; acted out in front of a video recorder;
carved into clay, wax or stone; stored on a computer chip; or woven into
fabric, for instance. Once an original work is created and fixed, copyright
exists.

What are the advantages of copyright registration?

One of the most important reasons for applying for copyright protection is
that federal registration is required before an infringement suit may be
brought. Copyright owners may sue for infringement whenever they believe that

others have used their works without permission or compensation. Federal registration provides evidence of copyright validity and proof of the work's creation date. It also entitles successful creators to recover additional damages and attorney's fees.

What can be copyrighted?

Copyright registration is available for books, poetry, plays, short stories, newspapers and newspaper articles, magazines and magazine articles, comic books, musical compositions (words and/or music), recordings, choreographic works, pantomimes, motion pictures, filmstrips, television programs, photographs, paintings, drawings, prints, maps, architectural plans, scale models, sculptural works, craft works, jewelry designs, fabric designs, computer programs, and data bases.

What rights are owned under a copyright?

The Copyright Act grants copyright owners exclusive rights in five categories: reproduction, adaptation, public distribution, public performance, and public display. The owner of a copyright, through written agreement, can authorize or license others to exercise these rights. Without a federally-registered copyright, creators of original works are at a severe disadvantage in negotiating these rights to others.

What is the life span of a copyright?

A copyright that is not a "work for hire" or in a work registered either anonymously or under a pseudonym, runs for the life of the creator, plus fifty years.

What are "works for hire"?

If a person, business, or corporation hires an individual to create a work, that person, business, or corporation then owns the copyright in the "work for hire". "Works for hire" may be created by permanent employees or on a free-lance basis.

Is copyright notice ever required?

Affixing copyright notice on works published (i.e. publicly distributed) after March 1, 1989 is purely voluntary. Its omission will not result in any loss of copyright protection. However, copyright notice is recommended as a means of preventing alleged infringers from raising the defense of "innocent infringement". In its most common form, copyright notice appears as follows: [year of first publication]

[name of copyright owner]

What is the value of a copyright search?

Copyright searches are your best line of
defense for determining whether specific works have been registered
for
copyright. In addition to our general searches which supply complete
information regarding claimants, authors, and assignments, our
specialized searches provide information concerning ownership of a
work's title, royalty rights and the ownership of a specific
character's
name and/or appearance.

When should I renew my old works?

Though filing for renewal is no longer required, filing guarantees you
important legal rights which would otherwise be lost. If your work
was
registered before 1978, your first term of copyright will end on
December 31, twenty-eight years after the date of registration.
Applications for renewal must be filed no sooner than one year prior
to
expiration of the first term. So, for example, if your copyright was
registered on February 3, 1972, you may renew anytime after December
31,
1999.

What are the penalties for copyright infringement?

Once infringement is proven, the infringer's future sales may be
blocked by
court order. Illegal copies may then be impounded and destroyed. In
addition, you may be awarded the infringer's resulting profits, plus
full compensation for your own lost sales. Or you may, instead,
choose
a court-determined award ranging from $500 to $20,000, plus, for cases
of willful infringement, an additional sum not to exceed $100,000.
Finally, on top of everything else, you may receive full compensation
for your litigation costs and attorney's fees.

This page and all its contents are protected by Copyright.

From: steveg@cseic.saic.com
Message-ID: <10825842@NEWS.SAIC.COM>
Source record: 82391

I've got several game carts that I'd like
to get running under the PC Xformer.
Supposedly the latest version supports
full player missile detection, sound,
etc. A co-worker has the registered
version. When I see Star Raiders
running in all its glory on the PC,
I'll buy in too.

What's the best way to copy a ROM cartridge so
that it can be run from disk?

The only thing I know of at this time is a
BASIC program called CARTCOPY. This is a
less than perfect solution. Most of the
time it requires keeping the lid to my 800
open and jamming the cart to be copied into
the "right" slot, and hoping (a) the system
doesn't crash, and (b) the program doesn't
check to make sure it's running from ROM.

Suggestions?

From: steveg@cseic.saic.com
Message-ID: <10827668@NEWS.SAIC.COM>
Source record: 82393

In reading several "for sale" posts I see
references to the condition of the
cartridge labels. Why?

Are the posters vouching that these are
original carts, vs. copied E-PROMS? Almost
amusing to see so much concern nowadays
with most (all?) of the publishers long
out of business.

Who owns the rights to these games now
anyway? For example, say I want to
write a brand new version of "Crush
Crumble and Chomp!"(*), for the PC. Who
would I contact to get persmission? Epyx
is long gone. Is there an equivalent
Govt. registry to the patent office for
copyrights? (Doubtful).

(*) Cool game - I've even got a T-shirt.
Once built a self healing robot that could
swim and set him out in S.F. bay with his
goal as "survival". Boring as hell gameplay
(just left him there) but he racked up the
points.

Another thing (About Tail Beta Lyrae). It is Philip Price.
I mis-spelled his name. I got it to load from SpartaDOS.
And it is a joystick jockey's game. I can't get anywhere with
it. I'm really not going to fly thru the tunnel that fast.
This thread started because somebody (I think from Europe)
couldn't get his copy to load and play. I can think of two
things. Possibly a PAL machine won't run it. More likely
a corrupted file and the person needs a new one.
The game is by Philip Price. So, who's Ivan?

You can assume that, but it's not correct. Patents and copyrights
are totally different types of intellectual property. Copyrights don't
have a fixed time period for expiration. It's at least the life of the
author.

I went a prepared this msg. for Marlin Bates, then re-read it and
see he doesn't want Antic Magazines or anything else I have.
So, I'm going to post my reply as an offer to the whole group.
(I also have about 35 ANALOGs from #23 to #72, with gaps in what I
have.)
I have about 62 Antics, from 2/84 to 4-5/90 and a couple
STarts with Antic section in them. This is an incomplete
set, obviously. Specifically I have:

Missing first 16 issues (4-5/82 to 1/84)

I have 2/84 and 4/84, then 8/84 to 12/84.
All of '85 except 2, 7, 8 and 11.
All of '86.
All of '87.
All of '88 except June.
All of '89 except August and the 12/89-1/90 issue.
Antic went bi-monthly 10-11/89 to 6-7/90. (no 8-9/90 was
published.)
Then Antic was put in STart for 10, 11, 12/90 and 1/91. Then
STart went bi-monthly for 2 issues (2-3/91 and 4-5/91, which
was the last issue.
Of the last issues, after 12/89-1/90, I have 2-3/90, 4-5/90
and three STarts 12/90, 1/91 and 2-3/91.

So, what you wanna trade for these?
It costs about $1 apiece to mail usps, but if you want all
60 or so, I could probably ship UPS for about $20. That's
the shipping, and I would want .75 per magazine ($45). So
that's a total of $65 I think the mags are worth.

Serious collectors care what their carts look like, not only if they work. It's generally not a referance to wether the carts are pirated or not.

Rick

228. 80 column drivers for use with MAE

I read a blurb on MAE 1.0 a while back, yet can't seem to be able to find it anywhere. My understanding is that it includes 80 and 64(?) column e: drivers in the archive. I have .96 (which is great!!!) and it comes only with the hyp e: accelerator, and not the 80 or 64(?) column drivers. The 80 col driver sure would be nice! Does anyone have these?

: wrote:

: >Is there a way to connect Atari joysticks to a Mac? I'm running Rainbow and
: >being able to use the joysticks would be great.

: I've thought of a possible method of doing this. One would need a
: semi-sacrificial Mac joystick (not the analog type). You would take this
: stick apart and wire up connections from its switches to the switches in
: the Atari stick (if you take your time to do it right, you can simply have
: an extra cable come out of the Mac stick with a 9-pin DIN male connector
: on the end). Now that you have the Atari stick controlling the Mac
: stick's state, you just have to configure the Mac stick's driver software
: so that it simulates the correct keypresses for Rainbow. (Most Macintosh
: joysticks allow you to simulate keypresses for joystick movements, so you
: can play games that only accept keyboard input.)

: I have seen a fairly cheap Nintendo-style gamepad for the Mac that would
: probably serve well for this kind of project.

: It would be a much bigger project to try to interface the Atari stick
: yourself. ADB, the interface used on the Mac to connect joysticks, mice,
: and keyboards, is a multiperipheral serial bus. You need at least a UART
: and probably a microcontroller (ADB devices are intelligent). Not
: difficult, but it's a lot easier (and probably cheaper) to cannibalize or
: alter an existing ADB joystick.

So every joystick you use on the Mac has a computer in it?!?
They should've just've made it like the 800 or else made a
"joystick interface" that had (at least four) joystick ports on it for
normal Commodore/Atari joysticks.
Kind've like the 815 disk drive,share one controller.

>
>
If I had the time, I'd tell you exactly how to do this. I don't
have the time. :(
Anyway, there are a number of ways to add the joysticks back, but
none of them are perfect. Here is my suggestion - add another PIA (a
second PIA is always useful) and use one of it's lines as a switch.
Add a couple of fast latches to control the memory switches. These
latches would hold the memory line states (i.e. the lines coming from
portb of the primary pia that used to make up the old joysticks).
Now, write a program that hooks into the OS and sets up the joystick
ports properly and then loads your favorite four player game (MULE
anyone?)
If you can't do the above, ask one of the die-harder-8bitters to
do it. It's not a quick project, but it isn't particularly difficult.

Charles Hughes
orinda@esslink.com

p.s. I occassionally browse this newsgroup. I don't have time to
actually play with my Atari 8-bits anymore. :(

This whole question is a red herring and has been from the start. It's been said on c.e.m, the line you shouldn't cross lies a little bit beyond what is strictly legal. Trading zero day warez on public newsgroups is obviously over the line, but acquiring old, no longer for sale software is ok, or at least defensible, IMHO.

One _Tail of Beta Lyrae_ question... I have the original disk and played it a lot back in the mid 80s. I stopped once it started acting strange... very early in the game, a "grey" generator would cause the background color to go grey and the visibility to degrade to impossible conditions. I'm wondering... was this the game's copy protection gone bad? It was the original disk, but if wear caused the CP to think it was a copy, would it do this to make it unplayable? I know another Phillip Price game, AR: The City, does a similar thing.

Thanks,

In a previous article, ccleving@freenet.columbus.oh.us (Connie Clevinger) says:

>Diskcomm files are not compressed,so you should ARC them as well.
>They just don't store sectors that are empty

Disk Communicator files are compressed using a few different
methonds including repeat sector omission, and some RLE variants.

However the compression is not optimal, then again neither is ARC.

You will get a few % with ARC, and a few more with PKZIP. YMMV.

>So if you un-Diskcomm a file and plan to be able to re-Diskcomm that disk
>later to give to someone,you should format it first with a normal disk
>drive (no 1050 Duplicator,Percom,nor Trak drives),which Diskcomm will do
>for you.This will make sure that un-used sectors are blanked.

Good idea :)

Which shouldn't be too surprising, considering bootleg copies of the game were distributed all over. It was like this thing was distributed before an official release or something.

I can't, for the life of me, find documentation for MAC/65 or AMAC, which are the two assemblers I have that seem to have come with some strange command-prompt DOS. (OS/A+ I think)

Nor can I find something called Qassembl which would probably out-do whatever I have. because I need an assembler that will allow me to modify the code, assemble on the fly,run, then modify the code some more. I remember having it but I can no longer find it!

I'm trying to code a demo. It's probably going to be the only demo released in 1996 that will work on NTSC machines, and I put something in that people on IRC say they haven't seen before.

It's bad enough I can't find music that I can plug right into a VBI, or any music at all for that matter, but I can't even code.

Someone, please, drop me a line. Thanks.

Cross-posted to: rec.games.video.nintendo,rec.games.video.sega,rec.games.video.3do,comp.sys.cbm,comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic

I have just added 50 SNES game screen shots to my WWW site. This
brings the total number of ORIGINAL screen shots on-line to 955,
for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel Intellivision,
Magnavox Odyssey2, Emerson Arcadia 2001, Bally Astrocade, Atari 8-bit
computer, Commodore 64 computer, Commodore Vic-20 computer, Tomy Tutor
computer, 3DO, Sony Playstation, SMS, NES, and SNES.

More will be added as I have time. Eventually, I will have my entire
collection on-line (hopefully before the turn of the century :)

The Sega Genesis is probably next in line.

If this is of interest to you, the URL is listed in my sig.

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

Actually, you are correct. Technically, Atari dos is copyrighted, but
Atari gave it away for free, so it's considered freeware also. At any
rate, like I said, it would be hard to prove (NOW) that the author
lost money on these items; most are unavailable anywhere commercially
and the ones that are are closeouts, etc. so the company that released
it doesnt get the profit anyhow.

This happens when the controlprogram in the drive detects an error.
The drive does not respond anymore.
Powering the drive OFF and then ON again mostly cures te problem.
You have then to reboot your computer.

It's simple binary logic!
Quotation from the famous DOS 3 Atari Disk Operating System Reference
Manual, page 2:
SETTING DRIVE CODES
Looking at the back of your ATARI Disk Drive(s), you can see a hole
with two tabs. The white and black tabs must be moved on each drive
according to that drive's designation.
Using a pen or a small screwdriver, set the switches to match the
following patterns:
Drive 1: both tabs to the left
Drive 2: the black tab to the right, the white tab to the left
Drive 3: both tabs to the right
Drive 4: the black tab to the left, the white tab to the right

CSS is still around, and I have the Floppy Board. It is a great product, my only complaint is that the connection to the black box could have been better engineered, but I don't know what considerations Bob Puff had to take into account when he designed the 2-part connection scheme. For those that haven't seen a BB/FB combo, the FB attaches via the pins on the right side of the BB, and also a 40 pin socket on the BB (previously filled by an IC). getting everything put together correctly is a chore, and periodically i have to reset this connection which has a tendency to come loose or oxidize or something on mine. But otherwise there is no better product like it on the market. I don't know if he has any in stock, or if you will have to wait until he runs another production run.

262. IRC #atari8 on efnet Wed night 10 PM EST!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-08 00:00:00 UTC
From: eru@sover.net
Message-ID: <31e0df8f.22117523@news.sover.net>
Source record: 82318

There is a new bot maintaining #atari8. prototype is it's nick. The channel has picked up!! (3 people there now, 5 before!) If talking to other people with Atari's to get that question answered, or for any reason at all interests you, meet us there Wednesday nights at 10 PM EST, or drop by any time (but don't be discouraged to find the channel empty).

263. SpartaDOS X XIO 40 (binary load)

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-08 00:00:00 UTC
From: ccleving@freenet.columbus.oh.us
Message-ID: <4rqpo9$3gf@login.freenet.columbus.oh.us>
Source record: 82319

I use XIO 40 to load my own binary files under SpartaDOS and MyDOS.
While it works under MyDOS and disk SpartaDOS,it doesn't work under SDX!
SpartaDOS X loads the file but it doesn't execute it.
(I can manualy execute it using a USR statement)

Is MAE what you are looking for? It is a very good Assembler /
debugger tool. I like it more and more every day! It is available at
the umich archive or one of the mirrors. The file name is MAE96.ARC.
If anyone has the 1.0 version, please let me know where you got it.
Thanks.

Source record: 82321

FOR SALE:

ATARI 65XE Computer (ECI Model)
XC12 Datacorder (plus a spare XC12)

Both computer and datacorder complete with original boxes.

Also included:

Two joysticks (speedking and cruiser),
Assember Editor, 100+ Games on cassette and ROM Cartridge,
Loads of magazines (e.g. Page 6, 8:16, Antic, Analog, New Atari User)

and books, including:

Technical Reference Notes, The Micro Enquirer: Atari XL, Programming
the 6502, The Atari BASIC Source Book, The Atari 130XE Handbook,
Writing Atari Adventures, Writing Strategy Games on Your Atari
Computer, Atari Collection: Volumes 1 and 2, Machine Language for
Beginners and Mapping the Atari (Revised Edition).

#30 ono for the lot (sorry, no splits). #= pounds sterling.

Enquiries to: Chris Roberts, 1. Monmouth Grove, Prestatyn, Denbighshire,
LL19 8TS, Wales. Tel: (+44) (0)1745 857193.

>software.
> THANK YOU!!

The Answer to your Problem is APE v109d. Found at:
http://www.nacs.net/~classics/

Ape Emluates disk drives ect, It's a simple matter of loading the ATR
image to one of the drive slots then using DOS or a Sector copier to
transfer the image to your REAL drive. The XFD's will have to be
converted to ATR first, APE will do this also. You'll have to build an
APE interface cable. The directions are included. The parts cost me
only 12.00.... 24.00 if you want to build the PRO cable too. All you
need is at your local Radio Shack.

After you've tried APE, You'll wonder how you ever got along without
it.

Now this would be an interesting idea. Use the 3/4/586 in a PC as a
controller for an 8-bit on a card. Maybe use a 65816 on the card, and
emulate as many of the special chips (GTIA/POKEY/etc) with the PC. You
could then extend the capabilities of the machine by upgrading the
emulation software. It should be able to use all the standard equipment
on the PC (serial ports, printer ports, IDE hard drive, VGA card, etc). It
would also be nice to bring some sort of cartridge port to the front of
the machine, put it in one of the drive bays.

The operating system for the PC would preferably be Linux, since it is
free, can multitask, and has very good performance with less than
high-performance hardware.

277. Monitor V1.1 released

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-08 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <31E138A0.5F22@rcp.co.uk>
Source record: 82333

Monitor V1.1 is now avaible from my web page:
http://greebo.onlinemagic.co.uk/~dok/atari8/

Monitor is a 6502 disassembler for the PC with an Atari
equates option. New features in this version:

* Disassemble now takes up to 3 parameters this allows the end
address and a filename to also be entered.

* Hex Dump now takes up to 3 parameters this allows the end
address and a filename to also be entered.

* The command line allows the file to be disassembled to be
passed.

* The V parameter to the Offset function allows the offset
to commence from the first address visible on the screen.

Other utilities at this site include:
ImageMan:
AtariDOS/MyDOS XFD/ATR file manager.
Boot2DOS:
Converts bootdisks, RobC and JonW Multiboot files
to work with DOS.
ADIR:
A simple directory display program for XFD and ATR images
containing AtariDOS and MyDOS.

I downloaded from an archive site, Black Lamp (Blacklam.p was the filename). How, using PC Xformer or ST Xformer (prefrably ST, I still haven't figured PC Xformer out...) can I stick Black Lamp into someplace where it will run? The archive site said that Black Lamp had to be run from Atari DOS or a menu of some sort... I've got Atari DOS (Came w/ PC Xformer, I copied over to my ST for ST Xformer) but I don't know how to run the thing! It's not BASIC, so I know that I have to leave out BASIC. I think what it really comes down to, is how do I add it to an XFD? Oh, I've also got XL-It!, so any help as to how to run from that will also be useful. Many thanks,

RAMdisk is NOT an installation procedure!

Would be nice, but I don't have an expanded Atari. (Only a stock 800XL
and a stock XEGS)

I've heard great things about MAC65, but I can't find any documentation
on it, and noth9ing anyone tells me on IRC works! (They say ENTER loads
in source code, so I type ENTER "D:SAMPLE.ASM" and it says WHAT? and I
type BLOAD "D:SAMPLE.OBJ" and it says WHAT? and forget about me ever
figuring out how to BSAVE.)

That reminds me... in case anyone is feeling really adventurous, we
need an equivalent to APE/SIO2PC for Linux; something (probably a
kernel module) to handle a 1050 connected via Xformer cable would also
be extremely useful.

To use the enter command the file must be an ASCII listing with line
numbers. The syntax for loading such a file is:-

ENTER #D:SAMPLE.ASM

MAC/65 does not use the double quotes like Atari BASIC

Sure, if you don't mind spending some money. Kernel Productions
(www.kernel.com) makes a ChoiceStick adapter for Mac that lets you plug
old Atari style joysticks and Sega Genesis style controllers into your
Mac. I use it for Rainbow, the 2600 emulator games, and simple arcade Mac
games. For these types of games, nothing works as well as the original
Atari stick. Only problem is the cost...the Choicestick adapter is around
$60.

286. RS232 Modems

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-08 00:00:00 UTC
From: dgick@sun1.iusb.edu
Message-ID: <4rqami$9qr@news.iusb.edu>
Source record: 82342

I've read the articles on the Atari 850, but I'm still not sure
if it is what I am looking for. What I want to do is download files
directly to my Atari 130XE either using my external RS232 modem,
or a null modem cable. What is the best way to hook up a normal
external modem to an Atari 8-bit? I read the serial ports on the
850 aren't standard, so a 9-pin adapter won't work.

I have an Amiga, so the PC transfer utils aren't possible (though
as a last resort I'm sure I can steal some time away on one).

Thanks!

I want to modify an Atari 2600Jr to have composite video outputs
but the information available from most sites seem to be for the
original 2600. Can somebody point me to a ftp/web site that may
have this info??

Funny, just yesterday I got a Gorf cart. I tried it with my 800XL (in
about every conceivable 'position') with zero luck. After 10 minutes of
this I walked over to my 800 (not XL) and it worked perfectly.

So, my guess is that it does *not* work on its own with an 800XL. Maybe
there is some band-aid though... anyone?

Wasn't there a Turbo 8/16 card for the pc that did just that? I remember reading about one, and it also had SIO ports on the card, so you could plug ATARI peripherals directly into the PC...Imagine, running a P5/133 with one of these cards, and a 1027 printer...

Hey, Yogi, I wrote the color screen dump that appeared in Compuke! (sic)
in, I believe, April 1984 - the last issue that published type-in
programs. Since they no longer publish such, and no longer publish
type-in collections, and my contract specifically stated that I would
receive residuals (which ain't happened and ain't gonna happen) - am I
obligated to refrain from making the source code freely available
(assuming I can find it...)? Do they own me if I refuse to pony up the
$250 I got paid for the original article?

I asked about this a while back and no one seemed to have any.
I thought it was very odd, considering I remember this being a
BIG part of Atari8 BBS's back in the 80's. I had a ton of the
things (many of them hilarious), but, of course, they're all
very much gone now. Surely there are some old BBS operators
out there who kept some of these??

I *really* think you should break things up in to logical (meaningful) subdirectories. I haven't taken a look at the site yet, but the mere thought of everything in one huge list brings tears to my eyes.

If you're worried about delays getting into subdirectories, I suggest you keep a master index to the whole site. That way one can just download the index, read it at his/her own lesiure, then re-connect and download exactly what's needed.

Originally, when I had plans of setting-up a site, I thought of creating an "upload template" which would request as much useful information as possible about everything that was placed on the site. Many of the major FTP sites have something like this.

If we're going to have a real archive site, it would be good to have information such as: author(s), publisher, year released, etc. Obviously this information won't be available for many (most?) of the items that are placed there, but it would be good to try.

There may well be if Atari boards die the same way C64 boards do. A
friend of mine has half a dozen old Commodore BBSes on disk on his
closet. It's humbling to think of what it has become, when one remembers
what it was. I've been considering the option of putting some of those
old boards up in my room for afew weeks, so that I may run some of the
boards I was once kicked off from.

>PS - "HI" from a fellow Tucsonan! =)

No, Phoenix. Sorry. I just put the Tucson arrow in because, well,
Tasmania is such an integral part of the Australia signature.

Whilst reading the usual rubbish I find here, Yogi wrote something interesting
to All about Looking for software, and a few questions...:

Hello Yogi,

Y> Actually, you are correct. Technically, Atari dos is copyrighted, but
Y> Atari gave it away for free, so it's considered freeware also. At any

Correct, *freeware*. Remember that freeware is *not* the same as public
domain. If someone puts something in the public domain, and I alter it, there
is absolutely _nothing_ they can do about it. With freeware, they have legal
recourse against me.

A nit-picking point maybe, but a valid one, I feel.

Yes I did have Joe put some subs in there, but the thing that always bugged me about other archive sites is that you have to WAIT and WAIT and WAIT for one sub to d/l, then start on another. I prefer to snag everything at once, so I can go do something else while my computer is computing.

302. Atari 8bit Hard Drive Sys Complete!

Can and will assemble a hard disk drive system for those that wish to run an 800xl computer or a 130xe computer with a hard drive system..

Can put together...New parts from 5mg through 112mg
Used parts from 5mg through 112mg..
The drive consists of PBI Interface, SCSI Interface or Scsi hard drive or MFM type with SCSI (Adaptec, Ect interface to SCSI), depending upon what you wish to spend for the system.

It can come with bare bones, (DOS bootable and nothing else), or can have loaded Atari 8-bit Public Domain software avaialble for your use, Games, Utilities, Pictures ect. You determine what you wish to spend and what you wish to receive.. Time is MONEY!! you spend it as you wish?..If interested in any of the above..lay out your system, what you wish to spend and what you wish to receive.

Possibly I can come up with a system for your needs???

Bob

With the existing copy right laws, an Atari 8bit user has one of
two choices....

1. Buy the software original copies legaly...

2. Prirat the damn stuff!

These are the only options available at this point in time. If
Congress changes the Copy Right Law then perhaps something else
is avaiable. Until then..in our lifetime, the copyright holds.

So don't be so damn cheap...pay for it...

Does anyone out there really understand what the heck goes into a
program being written in our code? I personally do not code, but
have looked into what is available for this computer and others,
have M/65 Action,Basic ect for the 8-bit with cross assemblers
and m/l for basic converters..also have C, Assembler and C++,
Pascal, Turbo Pascal, and converters for the IBM..The hours I
have spent reading the code does not warrent the effort spent by
dedicated programers for either code, with the monitary
compensation the actually receive for working hours/months of
their life for a piece of completed software. The Copy Right Law
is not enough to copmensate them for their efforts..

I personally appreciate every coder for every computer put out
by hardware freaks!..Without the coders there would be no new
hardware/software...These guys deserve your last dime, you would
gladly spend on coffee ect...or at this rate a quarter spent in
every video game you wish to play..

May these special people never, get tired of the task they
take on, and may your dimes, quarters, dollars never cease to
entice them to program for us the user!!!!!!!!!

Think about it!

>
>
>--

I've got a real copy of MAC65 with original documentation and all. If
it is indeed PD now, I can photocopy the docs for anyone interested.
My copy also includes DOS/XL.

I used to run it just fine on my stock 800 w/48K single disk drive. I
also have a copy of DOS/XL modified to fully support 1050 enhanced
density. As I recall the mod was a simple three or four byte
modification into a certain location of DOS/XL and a new format.com.

I also have the original 6502 Instruction Set Summary cheat sheet, but
it definitely looks copyrighted.

The syntax for ENTER from the docs is:

usage: ENTER #filespec [(,M) (,A)]

ENTER will cause the Editor to get ASCII text from the specified
storage device. ENTER will clear the text area before entering from
the filespec.

The parameter "M" will cause MAC/65 to NOT clear the text area before
entering from the file.

The parameter "A" allows the user to enter un-numbered text from the
specified device. The "A" option will always clear the text area
before entering the filespec.

(I still can't believe I have my copy on original floppy from 1982!)

Okay, this is what I would like...

A program, emulator, magic wand which does the following:

Allows me to change ATR files to either separate files or a DCM file. I will settle for something which lets me load the .ATR file, run Diskcomm and then save that file as something I can export.

This program needs to run (in a reasonable amount of time) on any of the following platfroms...
an Atari 8-bit (wow now THAT's novel)
a PC running DOS
a PC running Windows 3.1 or Windows for Workgroups 3.11
a Mac (68030)

Now is this possible or should I just take all the .ATR files I got from Yogi's and dump them? Please help!

Ever Since I moved, My Disk Drive for The Atari Doesn't Work. I have everything connected, and I'm getting power. I've tried everything I can. I got a ATARI 1050 Disk Drive and the main system is and ATARI 800XL, I think. I think that It's the I/O Connector or the Drive itself.

311. FS/T: Atari 8-bit computer items [07/09/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-09 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4rthpu$31q@dfw-ixnews8.ix.netcom.com>
Source record: 82354

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 07/09/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. For faster service, please
include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) No package deals on games or systems. All prices are clearly
listed.

6) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

7) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

8) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 5.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio
Shack for $7, plus tax. It allows for the connection of both 300 OHM
and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1200XL COMPUTER.

This item has not been tested.

$19.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #5

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #6

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #7

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

>My copy also includes DOS/XL.

I thought it was OSS/A+. Or something. That's what mine seems to have
come with. Whatever it is, it's the same DOS my copy of SAM seems to
have come with... and that copy of SAM seems to have come with a
different assembler.

>I also have the original 6502 Instruction Set Summary cheat sheet, but
>it definitely looks copyrighted.

Don't need it.

>The syntax for ENTER from the docs is:
>

>before entering the filespec.

Thanks. Any little tidbits and extra things I can learn about the
assembler will be to my advantage.

Is there a limit to what memory I can use with it?

Did you try cutting open the disk, taking out the magnetic core, rinsing
it off with water and slipping it into another disk casing?

Works better than you think.

316. Atari 8-Bit Relax (R) Biofeedback Program

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-09 00:00:00 UTC
From: Michael Current <mcurrent@carleton.edu>
Message-ID: <4rtnrb$4sb@zorak.acns.carleton.edu>
Source record: 82359

-From: "DON HERINGTON" <herringt@durian.usc.edu.ph>
-Date: Tue, 9 Jul 1996 06:35:11 +0800

Hoy Atari Folks,

My ISP here in the Philippines has a problem with the news server, so my first contact with the news group, and subsequent ones, at least until the server is fixed, must be e-mail.

I have used the Atari 8 bit Relax program for years now, treating hypertension and other stress related diseases in Africa and other places where medicine is too expensive or unavailable for the local people. The program has crashed, and maybe the disk drive too. I can't get anything to work except the 130xl or is it xe? The 1050 looks good, sounds good, but does not work.

This fantastic program was sold for around $100 in 1987 in Antic or Analog by Synapse. Synapse was sold to BrOderbund a few years ago, but they know nothing of the Relax program. I contacted them by mail. I also advertised in the American Journal of Biofeedback Professionals, with no responses.

The disk is a 5 1/4 inch low(very low) density disk for the 1050. I need someone to rebuild and test it for me. I probably need my 1050 fixed too. I have two tape machines, the old and new versions, and a tape. Both the tape and the diskette are flippys, i.e. they have Atari on one side and Commodore on the other. The hardware that comes with it consist of a headband with electromyograph sensors and a box that plugs into joystick one on the Atari (or joystick port two, for Commodore). The program won't run on a Commodore either, now.

I need this program to get back into my "Quack Doctor" role I played in Africa when I was in the Peace Corps there. If there is anyone out there in Atari land who can help me, advise me, etc., please E-MAIL me. Remember, I have no news server.

Thank you for your time and attention and excuse me for barging into your group.

You need a 9 Volt, AC power supply with about 1.5 Amps. Look closely,
it MUST be AC, NOT DC. I beleive it's rated at 31 VA (Volt Amps).

Source record: 82363
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic,comp.emulators.misc

I've seen this question posted a few times, but I haven't found the answer:

Is there an Internet site featuring Atari 5200 ROMs (for use with Rainbow, etc?)

If not, I can host the site if someone cares to email me some ROM images.
I don't have enough carts (or a cart dumper) but I do have FTP and Web
space.

E-mail replies to me & I'll follow up.

My wife is threatening to put several boxes of Atari 8bit hardware and software out for the trash. The stuff all worked a couple of years ago when I put it in the boxes. Anybody interested in the stuff?

Atari 130XE
Atari 800 48K
Commodore 1702
Zenith amber monitor
2 Atari 1050 disk drives
2 Percom disk dirves
Atari 1020
Atari 850
Atari 410
Atari CX85
Atari XM301
Atari 1030
3 joysticks

Software
SynCalk
Basic XE
Basic XL
2 Atari basic cart.
Print Shop
2 Print shop Library disks
Letter Perfect
Spell Perfect
Data Perfect
Paper Clip
a collection of game software both cartrage and disk most with manuals

I can be reached at rcolwell@bright.net but I am not online frequently so be patient.

Misc. For Sale
--------------

This is a list of some items that I'm looking to sell as they are
cluttering up my storage space below my apartment. I'm open to bids and
will be checking my email sporatically. I figure that I'll be taking
bids for about two weeks for each item (please note the posted date that
I'm putting next to each item.). If you have any questions, feel free to
email them to me and I'll be more than happy to answer them. Remember
that I'm posting asking prices and that I am somewhat flexible. Note
also that this list will be growing & shrinking as time goes by as I am
going through boxes in my storage unit. Thanks in advance to all who
respond! :D

Thanx for your nice archive. I found several programs too that doesn't
work on my 130XE (with boot menu). Here is the list:

axisassa
crosswor
cryptseg
davidmid
drelbs
ghostbst
maxwellm
ontrackr

Some games have no start address in the file, others have errors in
the load address range.

Perhaps you can repair it.
Good luck!

Be save and use a DC adapter unless you can open the modem and see if
there are rectifier diodes and Power supply circuitry... I would try
5vdc then 9vdc and last resort 12-15vdc (I would think 9v would do
it..)

-----------------------------------------------------------------

* QUE SIGNIFICA LA EXTENSION DE ARCHIVO .???
En general los Sistemas Operativos de Disco de Atari 8-bit no
interpretan la extension de los ficheros. (SpartaDos si lo hace).

Por convencion algunas extensiones estan reservadas para
determinados
tipos de ficheros. No son obligatorias.

En particular, a los usuarios de emuladores en PC. Hay que tener
cuidado de no confundir programas ejecutables del PC (codigo x86)
con
ficheros ejecutables del Atari (6502). Evidentemente no correran en
plataformas diferentes, aunque las extensiones puedan ser similares.

Algunos ejemplos de extension:

.ACT = Listado fuente de Action! (lenguaje de Atari)
.ARC = Archivo comprimido (en Atari) con ARC.COM. Compatible con
PKarc.
.ASM = Listado fuente de lenguaje ensamblador {assembler}.
.ASP = ???
.ATR = Disco virtual, imagen de un disquete originado con SIO2PC.
.BAS = Programa Basic "tokenizado". Grabado con "SAVE".
.BIN = Programa binario (ejecutable)
.C65 = listado Fuente de C65. Compilador C.
.COM = Programa binario (ejecutable)
.CTB = Modulo de Turbo BASIC compilado. Requiere el uso de
RUNTIME.EXE
.DCM = disco virtual originado con DSKCOM32 (especifico de Atari)
.EXE = Programa binario (ejecutable)
.FNT = set de caracteres (fuente) {font}
.LST = Un listado AtASCII (ASCII) de BASIC o Turbo BASIC. Grabado con
"LIST"
.M65 = Listado fuente de MAC65, otro ensamblador {assembler}
.OBJ = En Atari, binario ejecutable. En PC reservado para modulo
intermedio.
.PRO = Disco virtual mejorado. Acepta metodos de proteccion.
APE/SIO2PC.
.SET = Puede a referirse a datos, sets de caracteres (fonts), etc
```

.SHR = Archivo comprimido con SHRUNK (compresor de Atari)
.TBS = Programa Turbo BASIC "tokenizado", no compilado. Grabado con
"SAVE".
.XFD = Disco virtual creado por XFormer (el emulador)
.XMO = Fichero binario para XMODEM (desaconsejable)

---

* PARA PARTIR:
Como existe una gran variedad de programas para atari y emuladores,
me
parece util sugerir un paquete para empezar. Con estos programas
podras leer, decomprimir, ordenar, transfer archivos procedentes de
Internet.

- PC-XFormer - Un emulador de Atari 8-bit (o XL-It!)
- MyDOS53 - DOS 2.5 compatible (o Atari DOS 2.5)
- PKARC - Descompresor de archivos .ARC
- DCMtoATR - Convertidor de formato .DCM -> .ATR
- IMAGEMAN 0.3 - Gestor de discos 'imagen' o 'virtuales'.
Permite crear discos virtuales .ATR,
extraer/agregar ficheros individuales en el
disco virtual.
- TT 1.03 - Text translator (PC <--> Atari)
- ADIR 1.1 - Lista directorio de .ATR o .XFD. Puede
extraer
fichero individual.
- Turbo BASIC XL 1.5 - Un excelente Basic compatible con ATARI
BASIC

---

* QUE SISTEMA OPERATIVO DEBO USAR?
Es recomendable tener:

* Atari DOS 2.5: Es el estandar oficial (Hay que tenerlo)
* MyDOS 4.53 : Muy bueno. Compatible con Atari DOS. Tiene muchas
funciones agregadas sobre el DOS estandar.
* SpartaDOS 3.2: Muy similar al DOS para PC. Es muy bueno, puede
trabajar con discos formateados con otros DOS.
Incluso puede crear discos en formato DOS estandar.
Pero los otros DOS no pueden leer discos de
SpartaDOS.

Existen varios otros Sistemas Operativos para Disco. Sugiero elegir
uno de los DOS descritos precedentemente.

Otros D.O.S. para Atari 8-bit:
* Atari DOS 2.0: Version mas antigua y menos potente del DOS 2.5
* Atari DOS 3.0: Predecesor del DOS 2.5 (si, es correcto):
INCOMPATIBLE con casi todo! (No lo uses)
* Mach DOS
* DOS 2.5+

* DOS 4.0

(More work needed here ...)

Atte

|* The Unofficial Atari 8-bit New User, Emulator Help FAQ *
|* Revision 1.5, Jul 07, 1996 *
|* By Bill Kendrick *
|* *
|*==================================================================*
```

Bienvenido a la version en Espa&#65533;ol "NO AUTORIZADA" de:
Lista No Oficial de Respuestas a Preguntas Frecuentes para:
El nuevo usuario de Atari 8-bit y Ayuda del Emulador.

```
+-------------------------+

(*NT*) Notas del T.

1.- Corresponde a la version en ingles de este documento que se
| encontraba el 8/JUL/96 en:
http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html
```

2.- Tratare de evitar el uso de caracteres mayores que 127 ASCII
(sacrificare los acentos, pero no pienso eliminar la &#65533; &#65533; !)

```
|3.- En JUL/96 Bill Kendrick se hizo cargo de la dministracion de la
| coleccion de Atari 8-bit en la Universidad de Michigan (UMICH). Al
| reestructurar los directorios muchas de las referencias de la
| version anterior de este FAQ han cambiado.

|4.- Las adiciones y modificaciones estan marcadas con el caracter | en
| la primera columna de la linea.

|5.- GLOSARIO:
| URL: Localizador Uniforme de Recuros {Uniform Resource Locator}
PC: IBM-PC o compatibles
FTP: Protocolo de transferencia de archivos {File
Transfer
Protocol}.
FAQ: (lista de) Respuestas a Preguntas Frecuentes
OS : Sistema Operativo (SO)
DOS: Sistema Operativo de Disco {Diskette Operative
System}
RTFM: {Read The F* Manual} (F*: puede ser FAQ, free,
```

fine, fresh,
foul, fake, famous, fancy, feature, fantastic, f...
;)
File: (fichero), programa o archivo de datos individual.
Archive: (archivo), coleccion de programas comprimidos
juntos.
disk image: Disco virtual.
drive: Disquetera.
command: En castellano es mas correcto decir "ordenes"
string: Cadena de caracteres
array: Matriz o arreglo
AtASCII: conjunto ASCII con caracteres semigraficos de Atari
[xxxx] : Los corchetes representan una tecla con su nombre en
el interior. [ESC] escape, [RETURN] tecla de
ingreso, etc.
{xxxx}: Texto en ingles. Generalmente se usan las palabras
en
ingles en la jerga computacional.

Para ayuda en general {hardware, magazines, etc}, revisa la lista
oficial de preguntas frecuentes de Atari-8bit {Official Atari 8-bit
FAQ} en:

* Atari 8-bit FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/Atari-8-bit/faq/
faq.html

* Tambien puedes pedir una copia a Michael Current que mantiene la
lista: mcurrent@carleton.edu

Si quieres obtener la ultima copia (en ingles) de este FAQ:

* Unofficial Atari 8-bit New User and Emulator Help FAQ:
http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

* Tambien puedes pedirle una copia a Bill Kendrick, quien es el que
mantiene este FAQ.: kendrick@zippy.sonoma.edu

* Este archivo es publicado en formato de texto en los primeros dias
de cada mes en los newsgroups:

comp.sys.Atari.8bit
comp.emulators.misc

* Si quieres obtener la ultima copia (en castellano) de este FAQ
escribe a Marcos Mercado: mmercado@valdivia.uca.uach.cl

CAMBIOS RECIENTES:

| * Desde v.1.4 (Mayo 13, 1996): Correccion de direcciones URL y puesta
| al dia de los punteros al Atari Archive.

* Sobre la v.1.3 (Abril 16, 1996): Correccion de los numeros de
telefono de Micro Discount, se agrego informacion sobre "ACE".

* Sobre la v.1.2 (Abril 2, 1996): Se corrigio la URL de APE y se
agrego mas informacion (oficial) sobre XFSIO. Ahora hay punteros
hacia FAQ Atari 8-bit mas actualizado.

* Sobre la v.1.1 (Marzo 5, 1996): Se agrego informacion sobre XL-It!
y
XFSIO.

* Sobre la v.1.0c (Enero 17, 1996): Se actualizo y agrego numerosos
enlaces a Web, direcciones correo electronico {e-mail} y a
programas.

Por favor, tambien consulta los documentos relacionados con:
- MyDOS 4.5x, SIO2PC, XFormer, y el Atari 8-bit F.A.Q.

RESUMEN DE Atari 8-BIT Y DE LOS EMULADORES DE Atari 8-BIT:

Los computadores Atari 8-bit se produjeron entre 1979 y 1987. Los
principales modelos estrenados son:

400 - 8K-16K, 400/800 OS, con graficos CTIA o GTIA
(segun fecha de fabricacion)
800 - 8K-16K-48K, 400/800 OS, con graficos CTIA o GTIA
(segun fecha de fabricacion)
1200XL - 64K, 1200XL OS, con graficos GTIA
600XL - 16K, XL OS, con graficos GTIA
800XL - 64K, XL OS, con graficos GTIA
65XE - 64K, XL OS, con graficos GTIA
130XE - 128K, XL OS, con graficos GTIA
XEGS (Game System) - 64K, XEGS OS, con graficos GTIA
(con Missile Command
incorporado)

Todos los XL, excepto el 1200XL, tienen BASIC en ROM. Se podia
comprar un cartdridge BASIC para los modelos 400/800/1200XL.
---

* EMULADORES Atari:

* En PC/compatibles:
* PC Xformer 2.x. Demostrativo, limitado, de dominio publico
(sin codigo fuente).
* PC Xformer 3.0x. Poderosa version comercial
| * PC Xformer 3.5. Poderosa version comercial
(*NT*) el demo v.3.3 es genial!, sin sonido

* XL-It! Poderosa version de dominio publico.
(sin codigo fuente, todavia).
* ACE Sin terminar. dominio publico, VACE para
SVGA.
(incluye codigo fuente).

(*NT*) * AT800XL Otro emulador para PC, documentacion en
aleman.
(no he logrado pasar de la pantalla de
inicio).
Archivo AT800XL.ZIP

* En Apple Macintosh:
* Rainbow. Demostrativo de dominio publico, limitado.
(sin codigo fuente).

* Rainbow. Poderosa version de shareware registrado.
(sin codigo fuente).

* En Atari ST, TT, y Falcon:
* ST Xformer 2.x. Limitado, de dominio publico (antes era
comercial)
(incluye codigo fuente (creo)).

(*NT*) * ST Xformer 3.0. Limitado, de dominio publico (antes era
comercial)
(incluye codigo fuente).

* En UNIX y X Window: (incluso PC y Amiga)
* Atari 800 Poderosa version de Dominio Publico.
* XL-It! Poderosa version de Dominio Publico.
* ACE Sin terminar. Dominio Publico, XACE para
X-Window
(incluye codigo fuente).

CAPACIDADES DE UN ATARI DE 8-BITS:

GRAFICOS:

* Los Atari-8bit tienen una resolucion maxima de 320 x 192
(pantallas
estandar, sin sobre-barrido {non-overscaned} x 2 colores. Tambien
apoyan los graficos de 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4,
160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4. Pantallas de
40
x 24 x 256-caracteres (128 normal, 128 inverso, dispone de
indireccion de set de caracteres). El modo de texto es estandar (2
colores).

* Disponen de modos de pantalla de: 40 x 24 x 128 caracteres
multicolores (se permite 4 colores por caracter, los otros 128
caracteres tienen cambiado el 4 en un color 5). Y modo de
pantalla
de 40 x 12 x 128 caracteres multicolores.

* Los graficos GTIA apoyan modos de pantalla de 80 x 192 x 16 tonos
unicos y de 80 x 192 x 16 matices unicos.

* Se dispone de modos de pantalla: Normal (con un borde), estrecho
con

sub-barrido {underscanned} y ancho con sobre-barrido
{overscanned}.

* Los modos de pantalla pueden mezclarse (por lineas) en la pantalla
usando la Lista de Despliegue (un programa que ejecuta el chip de
graficos ANTIC en cada refresco de pantalla (60 veces por segundo
en
los verdaderos Ataris NTSC))

* Se puede habilitar deslizamiento fino {fine scrolling} vertical y
horizontal en cada linea de pantalla.

* Todos los otros atributos de pantalla (color, posicion horizontal
de
{player/missile}, prioridad de campo de {player/misile}, etc.) se
pueden ajustar en cualquier punto de la pantalla mediante una
"Interrupcion de Lista de Despliegue" {Display List Interrupt o
DLI}.

* Se dispone de cuatro {"players"} de 8 bits de ancho por 128 o 256
bytes de alto de color unico; y de 4 {"missiles"} de 2 bits de
ancho
por 128 o 256 bytes de alto de un solo color. Tambien se dispone
de
un modo de combinacion de 4 {"missiles"} para formar un 5
{"player"} de 8 bits de ancho, como un modo de hacer un XOR o de
apagar los colores cuando se superponen los {"players"} (una buena
forma de crear 3 colores a partir de 2 {"players"}!). Se puede
ajustar la prioridad y la deteccion de colision de los {"players"}
y
{"missiles"} (los programas PC XFormer 2.0, 2.5 y ST XFormer no lo
apoyan).

SONIDO:

* Se puede producir cuatro voces con resolucion de tonos {pitch} de
8
bits, 4 bits de resolucion de volumen, y 8 bits de distorsion. Se
puede combinar 2 voces para crear tonos con 16 bits de resolucion.
Tambien se puede habilitar modos exclusivos de control de volumen
de
4 bits para reproducir sonidos muestreados digitalmente.

* Una quinta "voz" se produce por el parlante interno en los Atari
400/800 (para el ruido de los teclazos y el zumbador).
Afortunadamente, en los XL/XE esto fue redirigido a traves de la
salida de audio normal, asi el sonido de las teclas {keyclick}
puede
eliminarse.

* Existen algunas actualizaciones de hardware stereo (como "Gumby")
que duplican el numero de voces.

PROPOSITO DE ESTE ARCHIVO:

Al momento de la publicacion (del original de este articulo) a
mediados de 1994, en el grupo comp.sys.Atari.8bit de Usenet, se
habia producido mucha discusion sobre el PC XFormer 2.0 (XF2 para
simpilificar) el emulador de Atari 8-bit basado en computadoras
IBM
/ MSDOS. Muchos en la comunidad de 8 bits estaban "hasta la
coronilla" con las preguntas sobre XF2 pero que no pertenecian a
ese
grupo, o por las preguntas realmente simples que se repetian de
cuando en cuando, lo cual fastdiaba a los lectores habituales de
comp.sys.Atari.8bit y a los subscriptores de los resumenes
{digest}.

Se creo este archivo FAQ para reducir el numero de preguntas de
"novatos" relacionadas con XF2. Ahora ha llegado a ser una
referencia bastante buena (y le permitio a su autor obtener el
trabajo de escribir la documentacion para la version comercial
3.0!)

Este FAQ respondera a preguntas tan simples como "Como puedo
excluir
el BASIC?" (Por supuesto, una buena respuesta a eso es RTFM (lee
el
"famoso" manual)) y "como obtener un directorio de un disco?" (lo
cual es menos obvio en los Atari 8 bits, err... en la MAYORIA de
los
8bits <sonrisa>.

Tambien dirigira a las personas que no saben de la gran cantidad
de
apoyo para los Atari 8bit (NO NECESARIAMENTE RELACIONADO CON EL
EMULADOR) y talvez se convierta en complemento de muchos archivos
oficiales y no oficiales que hay en la red (como el FAQ oficial,
La
lista de Vendedores y desarrolladores, la lista de Quien es Quien,
etc)

Desde la revision 0.4 de este archivo, el PC XFormer 2.5,
reemplazo
a la version 2.0 y se libero la primera edicion comercial 3.0. Se
presume que el lector tiene la ultima version de PC XFormer (3.3 o
3.5), aunque si tienes la version 3.0, debo decir que esa
documentacion es estupenda!.

(*NT*) (Si no captaste el chiste, mira el nombre del autor del manual
de XF3 y mira el nombre del autor de este documento en ingles)

-- Preguntas y Respuestas: --

* QUE SIGNIFICA "READY"?

Este es el indicador de espera de comandos del Atari Basic
{prompt}
Vea mas adelante sugerencias sobre Atari BASIC.

* POR QUE ESTE PROGRAMA NO CARGA?

Puede que el programa no trabaje con el Sistema Operativo Atari
800.
Talvez requiera el Sistema Operativo XL/XE. Asegurate que estes en
el modo 800XL o en el modo 130XL. (Nota: No todos (las versiones
de)
los emuladores apoyan los modos XL/XE!)

Puede que no trabaje bajo el Sistema Operativo XL/XE (caso poco
frecuente). Cambiar a modo 800.

Asegurate de haber eliminado el BASIC antes de intentar cargar el
programa, si no corre con el BASIC presente.

Puede tratarse de un programa BASIC!. Asegurate que estas en BASIC
y
usa los comandos BASIC "RUN" o "LOAD" (y luego "RUN"). Tambien
debes
estar seguro de que trabaja con la version del BASIC que tu
tienes.
Algunos programas solo corren con BASIC XL o XE (ambos son BASIC
contenidos en {"cartridges"} que no son de facil acceso para un
emulador), y algunos corren con TurboBASIC XL (basado en disco).

O simplemente puede que se rehuse a correr en el emulador.

* COMO ELIMINAR (EXCLUIR) EL BASIC?

Para intercambiar (ON/OFF) el BASIC en:
PC Xformer, press [SHIFT]-[F10].
Rainbow, ???.
Atari800, ???.
XL-It!, ???.
ST Xformer, ???.
|(*NT*)ST XFormer [F5] y buscar en el menu "Built-in BASIC: In/Out"
ACE, ???.

* POR QUE ESTE JUEGO O PROGRAMA NO SE EJECUTA CORRECTAMENTE?

Puede que use deteccion de colison de {"player/missile"}, lo cual
no
es apoyado en algunas versiones de los emuladores

Ver "Por que este programa no carga?", un poco mas arriba.

* COMO SALGO DEL EMULADOR?

* PC Xformer, presiona [F5]. Nota: Esto no es una salida temporal
a
o un salto al MSDOS. Se termina el emulador.
(*NT*) En la version 3.3 demo, funciona con [SHIFT] [F5]

* Rainbow, presiona [Apple]-[Q] o selecciona "Exit" en el "Apple
Menu".

* Atari 800, ??? o cierra la ventana (en X Window).

* XL-It!, ??? o cierra la ventana (en X Window).
(*NT*) salida definitiva [F8]

* ST Xformer, ???.
(*NT*) presionar [F5] y en el menu elegir "Exit"

* ACE, ??? o cierra la ventana (en X Window).

* Como salgo al Atari DOS?
(Asegurate que tengas una imagen de disco de autocarga
("bootable")
instalada en el drive 1 ("D1:"))

Escribe "DOS" bajo el indicador de espera de comandos del Atari
Basic ("READY")

Hace un "reboot" eliminando el BASIC.

* COMO USO ARCHIVOS QUE NO ESTAN EN IMAGENES DE DISCO (DISCO VIRTUAL)
DENTRO DE UN EMULADOR?

Para instalar ficheros en el PC XFormer como si se tratara de
discos
simplemente agrega los archivos a la linea de comando y usalos
como
si cada uno estuviera en su disquetera respectiva. (Asegurate que
el
primer disco virtual sea la imagen de un disco booteable con DOS)

Ejemplo: XFORMER MYDOS45.ATR filename.ext

Para usar un fichero de Mac en Rainbow, asegurate que el disco
virtual en la disquetera 1 tenga suficiente espacio para el
fichero
y selecciona ???. El archivo sera agragado a ese disco virtual.

Para usar ficheros Unix en Atari800, usa la disquetera H. ???.

Para usar ficheros MSDOS Unix en XL-It!, ???.

Para usar ficheros MSDOS o Unix en ACE, ???.

Usa el programa MSDOS, S2PC que te permite acceder a los ficheros
en
el interior de un disco virtual .ATR compatible con MyDOS. S2PC te
permite leer, escribir, borrar,cambiar directorio y ver el

directorio de un disco virtual compatible con MyDOS. Pude usarse desde la linea de comandos de MSDOS, o desde un menu.

Usa el programa MSDOS, AtariMG que es muy parecido a S2PC pero tiene
una interfase mas agradable, mas grafica (menos dirigida por menues). (Desafortunadamente, este no corre en todos los PC)

Usa el programa para Mac, Virtual Disk Editor ???.

* Y QUE SON LOS ARCHIVOS .ATR Y .XFD?

Refierase a los manuales de XFormer y SIO2PC para conocer detalles sobre aquellos archivos.

Puesto en forma simple, se trata de discos (virtuales) Atari,
almacenados como archivos del tamao del disco que representan (una
imagen de disco de 88Kb usara 88Kb en el IBM). Los archivos .ATR se
usan por SIO2PC y APE (ver mas adelante) lo mismo que la mayoria de
los emuladores de Atari. ST XFormer y PC XFormer usan los archivos .XFD.

* QUE SON SIO2PC y APE?

Revisa los manuales de SIO2PC para detalles sobre este programa.

Para detalles sobre APE revisa el manual de APE y el manual de hardware de SIO2PC.

Estos son programas que corren en IBM/compatibles bajo MSDOS. (APE tambien funciona bien bajo "dosemu" en IBM/compatibles corriendo Linux). Usando un cable simple (y relativamente barato), el software
hace que el IBM actue como si se tratara de varios perifericos de Atari.

SIO2PC emula hasta 4 disqueteras (permite cualquier identificacion de
disquetera entre 1 y 8) y una impresora.

APE emula hasta 8 disketeras, una impresora y un modem (RS232).

Usan archivos de imagen de discos (.ATR) y permiten el acceso al Atari
a archivos unicos de IBM. SIO2PC lo hace de forma muy parecida a PC
XFormer, asignando su propio disco (virtual) al archivo.

APE permite navegar en las disqueteras del PC a traves de una disketera Atari. La emulacion de la impresora de esos programas redirige lo escrito hacia "P:" de Atari a la impresora del PC.

SIO2PC tambien puede dirigir la salida haci ala pantalla o a un archivo en la maquina IBM. Se dispone de distintas conversiones o traducciones de texto. (APE permite macros de teclado, redefinicion
de ordenes del teclado, la capacidad de guardar la disquetera actual/etc. la configuracion y cargarla despues como un bloque, y la
capacidad de emular discos con proteccion de copia (con su propia extension al formato ".ATR", el formato ".PRO" (el cual, se espera que sea usado en versiones futruras de los emuladores Atari)) y crea
imagenes de disco a partir de discos protegidos de copia (con un cable especial). Puede que pronto SIO2PC tambien tenga esta habilidad, pues durante un tiempo la documentacion ha dicho que esto
esta planeado.

* QUE ES XFSIO?

Refierase al manual de XFSIO para detalles de como usar este programa.

XFSIO es un shell para PC Xformer, XLiT!, APE y SIO2PC que permite establecer los parametros para los programas antes mencionados. Tambien permite agregar un comentario de hasta 132 caracteres a cada
'disco virtual' y puede revisar la base de datos en busca de un disco con un titulo especifico.

-- MANEJANDO EL ATARI: DOS y OS --

Nota: Esta seccion simplemente discutira el Atari BASIC, el SO Atari,
el Atari DOS 2.5 y el MyDOS 4.5x (pues estos topicos parecen ser
los de mas relevancia para los usuarios de Atari de 8 bits con
menos conocimiento o experiencia).

* REFERENCIA RAPIDA DE AtariDOS y MyDOS:

* MyDOS (4.50 y 4.53) presenta los siguientes comandos:

* [*] Directorio actual del disco (como "dir *.*" en MSDOS)

* [1]-[9] Directorio de la disquetera correpondiente (como "dir a:*.*" hasta "dir i:*.*")

* [A] Directory: Directorio del disco (como "dir " con destino de salida optativo)

* [B] Run Cartridge: Termina y sale al "cartridge".

* [C] Copy file(s): Copia archivos(s) ("(fuente),(destino)" copia
desde un lugar o disco a otro. Al tipear solo "(fuente)"
copia
desde un lugar en un disco en una disquetera al mismo lugar
en
otro disco en la misma disquetera (pide intercambio de
diskettes).

* [D] Delete file(s): Borra archivo(s) (agregar "/N" para borrar
sin
que solicite confirmacion) (agregar ">*.*" o ":*.*" despues
del nombre de un subdirectorio para borrar los archivos en
el.
Solo el nombre de un subdirectorio borrara el subdirectorio
(si esta vacio y desprotegido {unlocked})). (Actua como
"del"
y "rd" en MSDOS.)

* [E] Rename file: Cambiar el nombre de archivo(s) (se permite
renombrar multiples archivos, pero se debe ahcer con
cuidado).
(como "ren (antiguo) (nuevo)" en MSDOS - con MyDOS, usar ","
entre el "antiguo" y el "nuevo".)

* [F] Lock files: protege archivo(s) contra sobre ecritura,
borrado
y apendizado (igual que "attrib +r (mascara)" en MSDOS.)

* [G] Unlock files: Desprotege archivos(s) (los deja en su estado
por omision).

* [H] Write DOS files: Escribe los archivos del DOS en un disco
(crea un disco que de auto-carga con la version de MyDOSdisk
que se esta usando y que tambien tiene archivo menu
"DUP.SYS")
(Esto es como "sys"? en MSDOS)

* [I] Format: Formatea un disco (agregar "/N" despues del numero
de
drive para hacer un reformateo rapido de un diskette
previamente formateado (esto es, solo un rapido "delete
.")

* [J] Dup disk: Duplica un disco (copia un disco completo, incluso
el sector de carga (boot). Pero, al usar XFormer, es mucho
mas
rapido copiar directamente un .XFD o .ATR a otro).

* [K] Make binary file: (Crear archivo binario) guarda un area de
memoria y la deja cargable en forma binaria. Ver [L]

* [L] Load binary file: (Carga archivo binario) Carga un programa
compilado. (como "(archivo)" en MSDOS. pero requiere
escribir

la extension ".EXE", ".COM", ".OBJ", etc.)

* [M] Run at address: Ejecutar desde una direccion de memoria
Dirigido a usiarios avanzados. Reboot es "E477", reset es
"E474" (estos son los valores hexadecimales de las
direcciones
en donde se encuentran las rutinas de reboot y reset.)

* [N] MEM.SAV: Cuando esta opcion esta puesta, aunque salgas al
DOS
(desde el BASIC, por ejemplo) se escribira lo que esta en
memoria al archivo "MEM.SAV" de tal manera que cuando se
carga
el DUP.SYS (el menu), no se pierde esa informacion. Cuando
sales del DUP.SYS con el comando "B: Run Cartdridge" se
vuelve
a cargar el contenido de MEM.SAV y el entorno deberia estar
como cuando lo habias dejado. Probablemente, es mucho mas
rapido y simple grabar "SAVE" tus programas, (si estas en
algun lenguaje) lo cual, pues generalmete nunca son tan
grandes como toda la memoria que se graba al archivo
MEM.SAV.

* [O] Options: (Opciones) presenta al usuario this presents the
user
algunas opciones. Principalmente para usuarios avanzados o
para configuraciones especiales. Ver detalles en la
documentacion de MyDOS.

* [P] Set density. Establece la densidad. Fuerza el reconocimiento
de una determinada densidad en una disquetera si el MyDOS no
lo puede reconocer por si mismo (??)

* [Q] Make a subdirectory. Cre aun subdirectorio (comoe "md" o
"mkdir" en MSDOS).

* [R] Set default directory. Establece el directorio por omision
(como "cd" en MSDOS y "cwd" en SpartaDOS) TEsto hace que al
referirse a "D:" sea lo mismo que un subdirectorio u otro
drive. Por ejemplo, si ponemos "D2:" por omision todas los
accesos o llamadas a "D:" se haran como si hubieramos puesto
"D2:" Algunos programas, al solicitar nombres de archivos
no
agregan el prefijo "D:" si este no se ha puesto
explicitamente. Estos agregan "D1:" Si no confias que un
programa busque "D:" en lugar de "D1:" y deseas que busque
en
otro lugar distinto de "D1:" (es decir, donde "D:" apunta a
lo
que pudiera ser una larga lista de subdirectorios {path}),
solo pon "D:" al comienzo. Ademas, algunos programas ni
siquiera ponen "D:" si no viene con el nombre que tu le has

dado. Esto puden producir errores (por ejemplo, 138:
dispositivo ausente, si por ejemplo, anotaste
"TESTFILE.DAT"
el sistema puede creer que pides el dispositivo "T:" en
lugar
de "D:TESTFILE.DAT").

* [S] Set ramdisk number. Asigna un numero al ramdisk. Esto
tambien
esta incluido en [O]ptions.

* [V] Verify writes. Verificacion de escritura. Tambien se
encuentra bajo el menu [O]ptions. Cuando Verify esta puesto
(ON), la escritura sera mas lenta pero 100% confiable. Si
esta deshabilitada (OFF), la escritura sera mucho mas
rapidaw
pero posiblemente no tan confiable (en discos malos o
defectuosos, por ejemplo). por omision esta deshabilitada
(OFF).

* AtariDOS presenta al usuario los siguientes comandos, que son
identicos a las ordenes de MyDOS: A, B, C (sin intercambio), D, E,
F, G, H, I(algunas densidades), J, K, L, M, N

* El AtariDOS 2.5 tambien tiene los siguientes comandos qe no se
encuentran en MyDOS o no tienen el mismo significado:

* [O] Duplicate file. Duplicar archivo. Se usa para copiar un
arhivo desde un disco a otro usando solo una disquetera. (en
MyDOS, al anotar solo el origen, [C]opy se comportara como
Duplicate de DOS 2.5)

* [P] Format Single. Formatear en densidad simple. En DOS 2.5, se
usa para formaear discos de 88 Kb (densidad simple) Para
formatear
en densidad mejorada {Enhanced Density} (127 Kb), solo usa [I].
En
DOS 2.0, [I] es al unica opcion de formateo y solo maneja 88 Kb.
(Puedo estar equivocado, pero nunca tuve una disquetera de doble
densidad corriendo bajo Atari DOS 2.0 o 2.5!)
---

* PREGUNTAS GENERALES SOBRE DOS y OS:

* COMO PUEDO ACCEDER A LAS DISQUETERAS?

Primero, necesitas haber arrancado {"booted"} con DOS. Todos los DOS
vienen en disquetes, con excepcion del SpartaDOS X que viene en un
cartdrige. Cuando enciendes el Atari, este hace algunas
"operaciones
de inicializacion" {boot-up}. Entre ellas, busca si hay una
disquetera
conectada, que este encendida y que ademas este dispuesta como

disquetera #1 ("D1:"). Si es asi, entonces comienza a cargar desde el
sector de arranque del disquete {"boot sector"}. Si no hay sector de arranque o hay un grave error en el disco, recibes el aviso de "BOOT ERROR" hasta que lo hayas corregido.

Para finalizar la disgresion, la repuesta a "como accesar las disqueteras" comienza con "necesitas haber arrancado ("booteado") con
DOS." Revisa el "8-bit FAQ" o en las colecciones de UMICH u otros sitios de FTP buscando la lista de los DOS disponibles para Atari; pero los mas usados son el Atari DOS (compatible con casi todo el software antiguo); el MyDOS (de alta calidad y compatible con Atari DOS); y el SpartaDOS (un DOS de muy alta calidad que se asemeja mucho
al MS-DOS del PC pero que desafortunadamente no puede correr todo el software que se ejecuta bien con Atari DOS o con MyDOS.) Nota: El SpartaDOS NO corre en Atari 400 u 800 (exceptuando las versiones en cartdridge y creo que la version 1.1 en disco).

Ahora que tienes un DOS cargado, el Atari reconocera el dispostivo "D:" (ver mas adelante, los dispositivos Atari). Como puede existir mas de una disquetera, debes poder llamarla a cada una por separado. Cuando el Atari tiene a su disposicion mas de un dispositivo del mismo
tipo, usa numeros para diferenciarlos. Asi, "D1:" es la disquetera 1,
"D2:" es la disquetera 2, "D3:" es la disquetera 3, ... etc.!

Luego del nombre de dispositivo "D:" viene el nombre de archivo. De entre los DOS mas usados solamente el MyDOS acepta letras minusculas en los nombres de archivo, pero como la mayor parte de los programas fuerza a usar nombres de archivo en mayuscula, realmente nadie parece
usar nombres en minusculas.

* COMO COPIO COSAS DE UN LUGAR A OTRO?

Tanto el Atari DOS y MyDOS te ofrecen el comando "C" en el menu de su
interface.

Para copiar mas de un archivo a la vez, cuando el DOS solicita "origen" {source} y "destino" {destination} puedes usar comodines (* y
? como en la mayoria de otros DOSes). Tambien puedes no anotar el "destino", asi puedes copiar un archivo desde un disco de la disquetera 1 hacia otro disco en la misma disquetera. El DOS te indicara cuando insertar cada disco.

* QUE SON LOS SUBDIRECTORIOS?

Los subdirectorios son lugares en donde van los ficheros igual que en
un directorio (raiz) normal. Excepto que aqui los ficheros van DENTRO
del directorio normal, incluso dentro de otro subdirectorio. Por
ejemplo, puedes haber dividido tu disco en ficheros de "JUEGOS",
ficheros "GRAFICOS" y en ficheros de "SONIDOS". Un directorio del
disco (el {root}, raiz, base, tronco, o principal) simplemente
mostrara los nombres de los subdirectorios "JUEGOS", "GRAFICOS" y
"SONIDOS". Luego si solicitas un directorio del subdirectorio
"JUEGOS", veras los ficheros que estan DENTRO de el (y talvez otros
subdirectorios). Imaginalo como un diagrama de arbol. Para la gente
familiarizada con Macintosh, las "carpetas" {Folders} son simples
subdirectorios. La ventana que aparece cuando abres un icono "Disk" es
el directorio raiz, y todas las "carpetas" dentro de el tienen mas
ventanas que a su vez tienen iconos de ficheros y de carpetas dentro
de ellas.

(*NT*) Creo que esto fue muy enredado y no clarifica mucho. Pero, trate
de mantener la fidelidad al original. Por lo demas el esquema de
directorio raiz o principal y subdirectorios es exactamente el que usa
el MS DOS.

He aqui una comparacion del uso de subdirectorios en diferentes DOS:

raiz 'JUEGOS' 'ESPACIO' dentro de 'JUEGOS'
AtariDOS D: n/d n/d
MyDOS D: D:JUEGOS: D:JUEGOS:ESPACIO:
SpartaDOS D: D:JUEGOS> D:JUEGOS>ESPACIO>
MSDOS (IBM) \ \JUEGOS\ \JUEGOS\ESPACIO\

Nota: solo el Atari DOS podria estar usando la disquetera 1. Todos los
otros DOS no necesariamente usan la disquetera 1. Incluso MyDOS y
SpartaDOS podrian estar ya ubicados "dentro" de un subdirectorio.

En MyDOS y SpartaDOS (tambien en MSDOS de un PC), puedes ubicar el
directorio "actual" {current} o "por omision" {default} en un lugar
diferente (disquetera o un subdirectorio) del directorio raiz. Asi,
"D:" puede significar "D1:" (como lo hace siempre el AtariDOS) o
"D2:JUEGOS:ESPACIO:"! POR FAVOR, LEE LA DOCUMENTACION DE MYDOS O
SPARTADOS PARA VER DETALLES SOBRE ESTO!

* QUE SIGNIFICA "P:", "E:", "K:", etc.?

Como se dijo antes, el Atari tiene "dispositivos" {devices}. Cuando se
ha leido un disco de carga automatica (booteable) desde una
disquetera, se dispone de "D:". Existen tambien otros dispositivos:

* C: Cassette
Lectura y esritura, ficheros sin nombres.

* D: Disk Drive (disquetera)
Lectura, escritura, acceso aleatorio, directorio, ficheros, multiples dispositivos (hasta 9 en MyDOS y en el SpartaDOS mas nuevo, 8 en el AtariDOS)

* E: Editor
Lectura, escritura. Esta es la manera en que normalmente se maneja el ingreso por teclado y la salida a pantalla. Si deseas "tipear" a mano directamente un peque&#65533;o fichero y enviarlo a la impresora o hacia un archivo en el disco, usa "E:" como el origen {source}.

* G: Graphics Printer (impresora grafica)
Escritura. Este dispositivo no esta incorporado en el Sistema Operativo sino que debe cargarse. Es un controlador de impresora compatible con Epson que facilita el vaciado de graficos.

* K: Keyboard (teclado)
Lectura. Este es el teclado. El ingreso a traves de el no es transmitido {echoed} a la pantalla como con "E:" (el editor)

* M: "Multi-Mouse"
Lectura, escritura?. Este dispositivo no esta incorporado en el Sistema Operativo sino que debe cargarse. Es un controlador que corre escondido (background) y acepta entradas ya sea desde el "mouse", un "joystick" o un tablero de dibujo {"touch-tablet"} y despliega un puntero de mouse en la pantalla.

* M: "Multiplexer"
Lectura, escritura. Para Ataris conectados entre si via una red de area local "Multiplexer" {Multiplexer local area network}. El sistema operativo "MUX" proporciona un controlador de dispositivo "M:" para comunicacion de computador a computador.

* P: Printer (Impresora)
Escritura. Envia datos a este dispositivo y parareceran en la impresora. Puedes imprimir ficheros (documentos, etc) usando "P:" como destino. Los Sisemas Operatisvos de Atari XL/XE aceptan "P1:" y "P2", aunque creo que este uso es poco comun.

* R: RS232 (COM port)
Lectura, escritura, modo concurrente. No esta dentro del Sisbtema
operativo, pero se puede cargar. Apoya los modems. La interface Atari 850 tiene su controlador "R:" {"R: handler"} incorporado lo cual significa que Atari tambien busca una 850 (u otra interface compatible) y recibe el codigo de "R: handler" de ella. Otras interfaces y los modems de coneccion directa de Atari requieren la carga de un fichero que ontenga el codigo "R:". Tambien se acepta el uso de "R1:" y "R2:" pero su uso es escaso.

* W: Windowing (pantallas)
Lectura, escritura. Este es un controlador de ventanas graficas

en modo grafico 8 (dasfortunadamente, se usa muy poco). Por supuesto tambien debe cargarse.

* Z: RTime8 Real-time Clock (reloj de tiempo real)
Lectura, escritura. Tampoco es parte del sistema operativo. Se carga desde el disco y permite al usuario acceder a "RTime8" un reloj de tiempo real respaldado por baterias, en un Atari de 8 bits. (Este es un dispositivo que viene en un cartdridge).

(*NT*) (Aqui Bill Kendrick dice: "No conozco ningun clono de "Z:" que permita ajustar el reloj interno del Atari (no respaldado por baterias,
ni tiempo real) si uno no tiene un RTime8, aunque me gustaria ver uno. (indirecta!!)".
Al menos en el Sparta 3.2 que usaba, el controlador es parte del sistema
operativo, tiene un par de funciones acompa&#65533;antes DATE y TIME que usadas
dentro de un archivo "STARTUP.BAT" permiten fijar la fecha y la hora al
encender al Atari. Con esto el SpartaDOS graba los archivos con fecha y
hora correctas. Lo mejor de todo es que usando el comando "TDLINE" obtienes una linea adicional en lo alto de la pantalla que indica estos
datos actualizados. Y todo esto sin el famoso cartdridge (me hubiera gustado tenerlo). Por lo tanto no es necesario tener un controlador especial.

* COMO IMPRIMO ALGO DESDE EL DOS?

Como se establecio antes, solo usa la orden "C" {copy}, luego anotas el fichero que deseas imprimir como la fuente {source}, y "P:" como el
destino {destination}. Ejemplo: "D1:DOCUMENT.TXT,P:"

-- MANEJANDO EL ATARI: BASIC --

* QUE SIGNIFICA "READY"?

De nuevo, este es el indicador de espera de comandos {prompt} del Atari Basic (de la mayor parte de los BASIC mas antiguos). Se muestra
al usuario cuando se esta en el modo "inmediato".

* Al ingresar una orden esta se ejecutara inmediatamente.

* Al ingresar un numero de linea y a continuacion una orden, esa linea
pasara a formar parte del programa en memoria.

* Al ingresar un numero de linea sin nada a continuacion, se borrara esa linea del programa en memoria.

* Para ejecutar un programa, usar la orden "RUN".

* Para borra un programa, usar la orden "NEW".

* Para limpiar o liberar las variables, las cadenas (strings) y las matrices {arrays}, usa la orden "CLR".

* Para cargar un programa, usa la orden "LOAD" seguida por un nombre de fichero (ver mas adelante). Para cargar y ejecutar un programa, usa la orden "RUN" seguida de un nombre de fichero.

* Para grabar un programa, usa la orden "SAVE" seguida de un nombre de
fichero.

* Para sacar un listad de un programa, usa la orden "LIST" seguida eventualmente por un dispositivo de destino ("D:ARCHIVO.LST", "P:")
y opcionalmente de un rango de numero de lineas separada(s) por coma(s).

* DONDE PUEDO APRENDER ATARI BASIC?

Se creara un (grupo de) fichero(s) para explicar todas las ordenes y su modo de uso del Atari BASIC y del Turbo BASIC. (Podria prepararse un archivo mas grande que estaria basado en ejemplos proporcionados en
el Manual de Referencia del Atari BASIC). (Siendo 1 de Agosto de 1995,
no existen estos ficheros especificos)

(*NT*) El Turbo BASIC XL v.1.5, disponible en algunas colecciones, tiene
un pequeo manual con la descripcion de las ordenes. (Ver subdirectorio
"Languages" de UMICH o en sus {"mirrors"})

* COMO SALGO DEL BASIC?

* Escribe "DOS" para abandonar el BASIC y pasar al DOS.

* Escribe "BYE" para salir del BASIC y salir hacia las rutinas "bye" del Sistema Operativo (Atari Memo PAD en los 400/800, el logo Atari
en los 1200XL, y al auto-test en los otros XL/XE. (Nota: en los 1200XL, para ir al auto-test usa [HELP] cuando aparece el logo Atari.

* Para deshabilitar el BASIC, re-inicializa manteniendo presionada la
tecla [OPTION]. (Para los ususarios de emulador, recuerden que hay formas de desabilitar totalmente el BASIC.)

* POR QUE LAS CADENAS DE CARACTERES {STRING} NO FUNCIONAN?

Las cadenas {strings} deben "dimensionarse" al igual que las matrices
en Atari BASIC. Las cadenas son arreglos especiales de caracteres. Ver
los ficheros "BASIC usage/etc." mencionados en la respuesta a la
pregunta 2. Dicho simplemente, para crear una cadena que acepte hasta
"n" caracteres, usa: DIM nombre$(n). Ejemplo: DIM A$(10) - Ahora A$
puede contener entre 0 y 10 caracteres.

* COMO PUEDO CREAR GRAFICOS?

Usa la orden "GRAPHICS" para cambiar a los siguientes modos de
pantalla: (Nota: Todos los modos, excepto 0, 9, 10 y 11 tienen 4
lineas de texto en una ventana de 40 x 24 x 2 que se ubica en la parte
inferior de la pantalla. Si le sumas "16" al numero de modo eliminas
esa ventana (pero no podras hacer "PRINT" o "PUT" a la salida
estandar, si lo haces solo obtendras una pantalla en modo grafico 0
(GRAPHICS 0).

(Nota: Sumar "32" al numero de modo para evitar que la pantalla se
limpie de inmediato. Sin embargo, hay un problema, las pantallas se
superponen una sobre otra y, a menos que uses ciertos modos en
momentos determinados, partes de algunas pantallas tendran "basura"
grafica.)

Numero de MODO	Descripcion
0	texto 40 x 24 x 2
1	texto 20 x 24 x 5
2	texto 20 x 12 x 5
3	grafico 40 x 24 x 4
4	grafico 80 x 48 x 2
5	grafico 80 x 48 x 4
6	grafico 160 x 96 x 2
7	grafico 160 x 96 x 4
8	grafico 320 x 192 x 4
9	grafico 80 x 192 x 16 luminancias {luminance}
10	grafico 80 x 192 x 9
11	grafico 80 x 192 x 16 matices {hue}
12	texto 40 x 24 x 4 colores
13	texto 40 x 12 x 4 colores
14	grafico 160 x 192 x 2
15	grafico 160 x 192 x 4

* ORDENES DEL Atari BASIC PARA LA MANIPULACION DE GRAFICOS SIMPLES:

* PLOT x,y
Pinta un pixel en las coordenada x,y (solamente en los modos
graficos 3 al 8)

* POSITION x,y
Pone el cursor en la ubicacion x,y de pantalla.

* COLOR c
Define un color para dibujar con "PLOT" y "DRAWTO" (c=color o
valor
de caracter)

* DRAWTO x,y
Dibuja una linea desde donde estaba el cursor (puesto con
"POSITION", "PLOT", "DRAWTO" o "LOCATE") hasta las coordenadas
x,y.

* LOCATE x,y,r
Lee la informacion grafica del pixel de las coordenadas x,y.
Almacena el resultado en la variable aritmetica "r"

* SETCOLOR c,h,l (c=palette location, h=hue, l=lum)
Escoge un matiz {hue} "h" y una luminancia "l" que se almacenara
en
el registro de color "c".
c =registro de color (0 a 4 segun el modo grafico)
h =numero de matiz de color (0 a 15)
l =luminancia del color (numero par entre 0 y 14)

Colores:
Nota: los colores de la orden COLOR no son identicos a los colores de
la orden SETCOLOR:

* COLOR 0 dibuja usando el color de fondo, puesto con la sentencia
SETCOLOR 4,hue,lum

* COLOR 1 dibuja usando el color "0", puesto con la sentencia
SETCOLOR 0,hue,lum

* COLOR 2 dibuja usando el color "1", puesto con la sentencia
SETCOLOR 1,hue,lum

* COLOR 3 dibuja usando el color "2", puesto con la sentencia
SETCOLOR 2,hue,lum

Lo enterior tiene su excepcion en el modo "GRAPHICS 10", donde "COLOR"
0, 1, 2 y 3 deben ser "POKE-ados" en las localizaciones de memoria
704,
705, 706, y 707 (la ubicaciones de color de los graficos {player/
missile}). Se presentaran ejemplos de esto en los archivos de uso del
BASIC (Sorry)

* COMO PUEDO CREAR SONIDOS EN ATARI?

Recuerda, XFormer 2.5 no permite sonido!. (XF3.0 si lo hace). De
todas
maneras, en Atari BASIC es:

SOUND c,p,d,v

* c=channel (0-3) (canal)
* p=pitch (0-255) (tono)
* d=distortion (0,2,4,6,8,10,12 or 14) (distorsion)
* v=volume (0-15) (volumen)

El caracter de "chicharra" es CHR$(253) o bien [CONTROL]+[2] (NO ES
[CONTROL]+[G])

* COMO MUEVO EL CURSOR Y EDITO?

El dispositivo "E:" de Atari (de entrada/salida estandar, es el
"Editor") permite editar usando los siguientes "teclas de edicion":

Tecla: AtASCII: Uso:
---------- --------

Atari ninguno Video inverso on/off (teclados Atari
400/800)
Inverso [Triangulo] ninguno Video inverso on/off (teclados Atari
XL/XE)
CAPS ninguno Pone minusculas (400/800 OS)
CAPS ninguno Intercambia minusculas/mayusculas
(XL/XE)
Sh-CAPS ninguno Pone modo texto maysuculas (todos los
OS)
Ct-CAPS ninguno Pone caracteres semigraficos
[Control]-[Lock] (Todos)
Up ([^-]) 28 Mueve el cursor hacia arriba
Down ([^=]) 29 Mueve el cursor hacia abajo
Left ([^+]) 30 Mueve el cursor hacia la izquierda
Right ([^*]) 31 Mueve el cursor hacia la derecha
Espacio 32 Escribe un caracter "espacio" avanza 1
a der.
BackSpace 126 Borra 1 caracter y retrocede 1 espacio
Delete ([ShBkspc]) 156 Borra una linea logica (puede tener
entre
1 y 3 lineas fisicas de pantalla)
Insert ([Sh>]) 157 Inserta una linea fisica
Ct-Delete ([^Bksp]) 254 Borra el caracter bajo el cursor y
"tira"
el resto de la linea hacia la
izquierda.
Ct-Insert ([^>]) 255 Inserta un espacio bajo el cursor,
empuja el resto de la linea hacia la
derecha.
ClearScn ([^<]) 125 Limpia la pantalla
Bell ([^2]) 253 Toca la chicharra
TAB 127 Mueve el cursor hasta la proxima marca
de
tabulacion
ClrTAB ([^TAB]) 158 Borra cualquiera marca de tabulacion
que

exista en donde se encuentra el
cursor.
SetTAB ([ShTAB]) 159 Pone una marca de tabulacion donde esta
el cursor.
ESC 27 Pone ESCape (si precede a un caracter
de
edicion lo muestra sin ejecutarlo
(como
si fuera un caracter normal))
RETURN 155 Pone un Fin de Linea. Termina una
entrada
"input" (mueve el cursor al comienzo
de
la proxima linea,

Nota: Los caracteres en video inverso tienen el mismo valor AtASCII
que los caracteres normales mas 128. (El unico caracter inverso
invisible es el Esc-inverso, o lo que podria ser la combinacion de
[Esc][RETURN]. El caractere existe , pero debe ser puesto a mano en
la
RAM de pantalla. Y bien, al menos aun dispones de 255 caracteres
facilmente visibles! (sonrisa))

* COMO HAGO QUE APAREZCAN LOS CARACTERES CORREPONDIENTES A LAS "TECLAS
DE
EDICION"?

Como se dijo antes, debes haber mandado previamente un caracter de
ESCape a la pantalla.

* Cuando solo estas ingresando un texto, presiona [ESC] y luego la
tecla de edicion que deseas, en pantalla deberia aparecer el
caracter para esa tecla.

* Si estas ingresando un texto que requiera mostrar un "caracter de
edicion" dentro de una sentencia "PRINT", antes debes haber
mandado
un caracter ESC. Para eso presiona [ESC][ESC] para hacer que
aparezca el caracter de ESCape; luego nuevamente presionas [ESC]
seguido de la tecla de edicion que deseas representar. En pantalla
aparecera el "caracter de edicion" correspondiente. Cuando se
ejecuta la sentencia PRINT, el primer ESCape (que escribiste como
2
[ESC]) forzara al editor a desplegar en pantalla el siguiente
caracter (aunque este sea un "caracter de edicion").

Esto hace dificil alinear en pantalla un grupo de sentencias PRINT
que crean un dibujo de varias lineas o un menu que muestre
caracteres de edicion. Probablemente sea mejor crear todas las
lineas con sentencias PRINT que puedan caber en la porcion visible
de la pantalla, y entonces editarlas (sin poner ningun caracter de
ESCape, luego cuando la imagen de pantalla luce como tu deseas,

mueves el cursor por encima de cada caracter de edicion y
presionas
[CONTROL][>] (Control-Insert juntas). Deberia aparecer un espacio
en
blanco bajo el cursor y el resto de la linea desplazarse hacia la
derecha. Ahora, presionando [ESC][ESC][ESC] mas un "caracter de
edicion" habras colocado ese caracter donde estaba el espacio en
blanco. Una vez que hayas finalizado la edicion de cada una de las
lineas con PRINT, ASEGURATE DE INGRESAR LAS LINEAS MODIFICADAS AL
PROGRAMA, PRESIONANDO [RETURN] SOBRE CADA UNA DE LAS LINEAS
EDITADAS! Whew!

(*NT*) Muy interesante! pero IMHO, creo que Bill se volo un poco en el
parrafo anterior. Esta informacion NO ES para principiantes.
(Sorry, Bill :)

* Puedes poner un "1" en la localizacion "766" de la memoria con la
orden "POKE 766,1" para pasar al modo de "no-edicion" (Con
excepcion
del fin de linea (EOL), se veran todos los caracteres, incluso el
de
limpiado de pantalla!). Cuando quieras volver al modo de edicion
normal, pones un "0" en la misma ubicacion con "POKE 766,0".

* POR QUE LOS COLORES DE PANTALLA VAN CAMBIANDO?

ESTE FUE EL PRIMER "PROTECTOR DE PANTALLA" {screeen saver} QUE
EXISTIO!. Se le llamo "modo Attract" y se usaba en el Atari 2600 y
en
las series 400/800/XL/XE (y probablemente en el 5200 y el 7800, pero
no puedo confirmar esto). Si transcurrian 7 o 9 minutos (dependiendo
del SO, el modelo, etc) sin que se hubiera presionado una tecla, los
colores de la pantalla comenzaban a cambiar. Esto protegia al TV o
al
monitor de da&#65533;ar la pantalla por mantener una imagen fija por mucho
tiempo.

* Para inactivar este "modo", presiona una tecla, o desde dentro de
un
programa, usa la orden "POKE 77,0" al menos una vez cada varios
minutos (Si la pantalla esta activa, de otra manera deshabilitarla
podria ser un tanto inutil)

* Para activarlo, espera 7 o 9 minutos sin presionar una tecla
siempre
que la localizacion de memoria "77" este puesta en "0", o pone un
"128" en la localizacion "77" con "POKE 77,128", Voila! modo
attract
instantaneo!

* COMO PUEDO TENER ACCESO A LOS "DISPOSITIVOS" DEL ATARI?

Dispones de las siguientes ordenes en el Atari BASIC (tambien hay
variaciones de las mismas en la mayoria de los otros lenguajes
Atari!):

* OPEN #a,b,c,d$
Abre el canal 'a' para comunicarse con 'd$' en modo 'b' con el
modo
auxiliar 'c'. El canal 'a' debe estar libre si no obtendras un
"error
129" ("Canal ya abierto").
Para explicar los diferentes 'modos' he aqui algunos ejemplos
simples:

* OPEN #1,4,0,"K:"
Ingreso desde el teclado.

* OPEN #2,8,0,"P:"
Salida hacia la impresora.

* OPEN #3,12,0,"D:FILE"
Abre un archivo de acceso aleatorio en el disco.

* OPEN #4,9,0,"D:DATA"
Abre un archivo para agregar datos al final de el ("apendizar")
en
el disco.

* OPEN #5,13,0,"R:"
Abre el controlador de interface serial RS232 en modo
concurrente
(modem)

* OPEN #6,6,0,"D:*.TXT"
Lee el directorio del disco (usa una plantilla para leer solo
los
ficheros con extension .TXT)

* CLOSE #a
Cierra el canal 'a' (liberandolo para uso posterior)

* GET #a,b
Lee un byte desde el canal 'a' y lo almacena en la variable 'b'

* PUT #a,b
Pone el byte 'b' en el canal 'a'

* INPUT #a,b$
Lee una cadena de caracteres (hasta 255 bytes y un caracter 155
(fin
de linea) OBLIGATORIO, desde el canal 'a' y lo almacena en 'b$'.

(*NT*) Habria que revisar lo anterior. De lo que yo sabia el
AtariBASIC
tiene la particularidad de permitir cadenas de caracteres que ocupen
hasta la TOTALIDAD de la memoria disponible (No esta limitado a

{"strings"} de 255 caracteres!). Aunque no permite directamente
arreglos de cadena, el manejo de los {strings} en AtariBasic (Turbo
BASIC tambien) es sumamente flexible pudiendo simular arreglos,
almacenar grandes bloques de memoria, manejar rutinas en lenguaje de
maquina, etc).

* INPUT #a,b
Lee una cadena de hasta 255 caracteres (con un "fin de linea"
(chr$(155)) desde el canal 'a' y almacena el valor numerico en 'b'

* PRINT #a,(lo-que-sea)
Igual que la sentencia BASIC normal PRINT, pero envia la
informacion
al canal 'a' (por supuesto, se permite punto y coma, comas, y
tipos
mixtos)

* STATUS #a,b
Lee el codigo de error 'status' del canal 'a' y lo almacena en la
variable 'b'

* XIO a,#b,c,d,e$
Llamada generica de entrada/salida (input/output I/O). Esta es un
poquito complicada y puede que se expanda en una futura revision.
Solo ten en cuenta lo siguiente:

* a - orden
* b - canal a usar (en general debe estar libre)
* c - modo auxiliar 1
* d - modo auxiliar 2
* e$ - fichero o dispositivo sobre el que se va actuar.

Ejemplos:

* XIO 32,#1,0,0,"D:FILE,OLDFILE" cambia el nombre a un archivo.

* XIO 33,#1,0,0,"D:OLDFILE" borra un archivo.

* XIO 34,#1,0,0,"D:GAMES" crea un directorio en MyDOS y en
Sparta-DOS

* XIO 35,#1,0,0,"D:NEWFILE" bloquea un fichero protegiendolo
contra
la sobre-escritura o el borrado.

* XIO 36,#1,0,0,"D:NEWFILE" DESbloquea un archivo bloqueado.

* XIO 40,#1,4,0,"D:PROG.OBJ" carga y ejecuta un archivo binario
(como "L" en AtariDOS y en MyDOS)

* XIO 40,#1,5,0,"D:PROG.OBJ" carga un archivo binario (como "L" en
AtariDOS y MyDOS con la opcion "/N")

* XIO 41,#1,0,0,"D:GAMES" cambia el directorio por omision a esa
disquetera/subdirectorio.(Todas las

llamadas a "D:" se haran desde ahora a
esa
disquetera/subdirectorio)

* XIO 254,#1,0,0,"D2:" Inicializa (format) un disquette En Atari
DOS
2.5 crea formato "mejorado" {enhanced}.
Para
"formatear" en densidad simple, usar XIO
253)

MyDOS es exactamente al reves. XIO 254= formato simple,
XIO 253= formato "mejorado"

* XIO 253,#(channel),1,0,"D(drive):" formatear un disco una
disquetera en modo "mejorado"
{enhanced}.

NOTA: XIO 39 y XIO 40 son lo mismo. Tambien fijate en el uso de
el parametro AUX1 en el ejemplo de "XIO 40"

-- PONIENDO FICHEROS Atari EN UN PC: --

* COMO PUEDO LEER DISQUETES Atari EN MI PC?

Nota: Por favor, que alguien me de mas detalles o correciones aqui!
Gracias!

Si tienes discos Atari de doble densidad, usando el programa UTIL
(MyUTIL) en PC, puede leer discos Atari de doble densidad. Para
mayor detalle, revisa el "Atari 8-bit FAQ", por favor.

Si tienes una disquetera Atari 1050, puedes usar el programa MULE
para
copiar ficheros, uno a la vez, en partes de 20 Kb cada vez, desde el
Atari al PC. Primero debes formatear (en el PC) un disco con
180 Kb, luego ejecutar MULE.COM en el Atari para trasladar el
fichero
hacia ese disco especialmente formateado. Luego en el PC corres
MULE.EXE y lees el disco con el fichero. Tedioso, no es cierto?.
MULE
no pretendia ser un programa completamente funcional, solo un
demostrativo para demostrar que este metodo era factible.

Si tienes la fortuna de tener una interface "Black Box" en tu Atari,
puedes poner una disquetera PC externa junto al accesorio Black
Box, la tarjeta para disquetes {Floppy-Board}. Luego , simplemente
copias el contenido de tus discos Atari (incluso un disco duro)
hacia
disqueetes PC a traves del "floppy-board". Finalmente ya puedes
leer los disquetes directamente en el PC.

* OK, YO NO PUEDO HACER NADA DE ESO, y AHORA QUE? !

* Puedes usar SIO2PC. Este es un programa que transforma al PC en un
conjunto de disqueteras Atari. Necesitas un cable SIO2PC (que
puedes
comprarlo, armado o por partes, o comprar partes sueltas y
construirlo tu mismo) y el software SIO2PC (disponible en UMICH).
Conecta el PC al Atari, carga el programa SIO2PC en el PC, y en el
Atari corres el programa FILE2PC para transferir ficheros
directamente hacia el disco duro del PC. O crear "imagenes de
disco"
(discos virtuales) con SIO2PC y copiar archivos desde un disco (un
disquette Atari "real") hacia otro (una "imagen" SIO2PC) con la
orden "C"opy de AtariDOS o el MyDOS. Si quieres extraer
individuales
ficheros desde in disco virtual SIO2PC y almacenarlos en el disco
duro de tu PC on disquetes, usa de nuevo FILE2PC o bien "S2PC", un
programa para PC que puede extraer o agregar ficheros desde
"discos
virtuales" de SIO2PC compatibles con MyDOS.

* Puedes usar dos modems (uno en el PC y el otro en el Atari) para
transferir {download} ficheros desde el Atari 8-bits.

* Si no necesariamente quieres archivos que ya tengas en tu Atari,
puedes "bajar" {download} hacia tu PC, archivos desde la enorme
coleccion disponible en sitios de FTP y en los BBS {Bulletin Board
Systems} que apoyan a Atari 8-bit.

* Si solo tienes 1 modem, por lo tanto no puedes conectar el Atari
con
el PC via modem. Pero lo puedes hacer a traves de un modem nulo, o
puedes enviar {upload} ficheros desde tu Atari hacia un BBS, o a
alguna cuenta a la que tengas acceso. Para luego hacer el proceso
inverso, esta vez usando el modem con el PC.

* EXISTE ALGUNA MANERA MAS SENCILLA DE TRANSFERIR ENTRE "DISCOS
VIRTUALES" generados con Disk Communicator (formato .DCM)) y los
generados con SIO2PC o con PC/ST XFormer (formato .XFD) que el usar
el Disk Communicator 3.2 en mi Atari?
Quiero decir, si ambos son "discos virtuales"! y ambos estan dentro
del disco duro de mi PC (snif!)
(y nota: de todas maneras, DiskComm no se comporta como SIO2PC la
mayor parte del tiempo).

SI!. Existe un programa para PC llamado "DCM2DSK". (Por que "DSK" y
no "ATR"?. Para evitar que la gente se confunda con ATR-8000(?))
Tambien esta el codigo fuente en C de un programa muy similar
llamado
"DCMTOATR" que trabaja en un PC y en Unix y probablemente cualquier
otro sistema que ciente con un buen compilador de C (En el archivo
viene una version ejecutable para PC)

*** Donde conseguir o FTP'ar los ficheros mencionados en este FAQ: ***

* PC Xformer 2.0 y 2.5, lo puedes "bajar" desde:
| * gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Computer/

335. Backing up old disks

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-10 00:00:00 UTC
From: krieg@miller.cs.uwm.edu
Message-ID: <4s0s7m$3dr@uwm.edu>
Source record: 82243

I've had my Atari 8-bit for 15 years now, and some of my disks are getting up there in terms of age. I'm considering re-formatting my disks and then recopying my files back onto them. Do disks themselves go bad with age, or is it just the magnetic pattern on the disk? Does a reformat refresh a disk so that it is ready for another 5 to 10 years of life?

I have other options, but they currently aren't all viable.

1) Transfer the files to my PC hard drive.
This may be my best bet. Currently that would invlove uploading at 2400 baud to my Unix account, and then downloading to my PC. Ugh! I don't have the PC interface cable, and my PC isn't anywhere close to my Atari. I might be able to scrunch it next to my PC for a few days to do a data transfer.

2) Get an Atari hard drive.
I'd love to, but no one seems to be selling. Anyone have any leads?

3) Rely on the archive sites
I'm sure more and more will pop up, and they'll get bigger and bigger. In time they should have everything I have.

How are others coping with the eventual bit-rot we'll all experience?

336. Suggested Addendum to Newbie/emulator FAQ (ENGLISH)

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-10 00:00:00 UTC
From: mmercado@valdivia.uca.uach.cl
Message-ID: <31e35bd9.6705189@204.30.237.53XXnews.zippo.com>
Source record: 82244

```
NEW_AN15.ADE
suggested ADDENDUM to the NEW_AN15.SPA
reviewed 09/JUL/96

mmercado@valdivia.uac.uach.cl
------------------------------------------------------------

* WHAT IS THE MEANING OF THE EXTENSION .???
In general, Atari 8-bit Disc Operating Systems do not process file
extensions (SpartaDOS does it).

By general agreement some extensions are reserved to certain kind of
files and archives. These are not mandatory.

In particular to the emulator users in the PC. Beware of confusing
PC
executables (x86 code) from Atari executables (6502 code).
Obviously,
even they do have similar extensions, if you exchange platform it
will
not run and you could get a computer hangup.

Some extension examples:

.ACT = Action! source code listing (Atari language)
.ARC = ARC.COM compressed archive (Atari). PKarc compatible (PC).
.ASM = Assembler source code listing.
.ASP = ???
.ATR = SIO2PC generated virtual disk, or image disk.
.BAS = Tokenized BASIC program. "SAVED"
.BIN = Executable binary program.
.C65 = C65 source code listing (a 6502 C compiler).
.COM = Executable binary program.
.CTB = Compiled Turbo BASIC module. RUNTIME.EXE needed.
.DCM = DSKCOM32 generated virtual disk. (Atari specific)
.EXE = Executable binary program.
.FNT = Font set file.
.LST = AtASCII (ASCII) BASIC listing. Program "LIST"ed
.M65 = MAC65 assembler source code listing.
.OBJ = Executable binary (Atari). Pre-compilated object module (PC).
.PRO = APE/SIO2PC enhanced virtual disc. Supports protection schemes.
.SET = It can be data, fonts, etc.
.SHR = SHRUNK compressed archive. (Atari specific compressor).
.TBS = "Tokenized" Turbo BASIC program ("SAVE"d not "LIST"ed)
.XFD = XFormer Virtual image disk.
.XMO = XMODEM binary file or archive (discouraged).
```

---

* GETTING STARTED:
Since there are a lot of Atari/emulator related programs. Here is a
very personal starter-kit suggestion. By using these files you can
read, decompress, arrange, transfer archives and files taken from
Internet:

- PC-XFormer - An Atari 8-bit emulator (or XL-It!)
- MyDOS53 - DOS 2.5 compatible (or Atari DOS 2.5)
- PKARC - Archive de/compressor .ARC (PC)
- DCMtoATR - .DCM -> .ATR format converter.
- IMAGEMAN 0.3 - Image or virtual disk manager. It supports
create image, extract/add files to the
virtual .ATR disks
- TT 1.03 - Text translator (PC <--> Atari)
- ADIR 1.1 - .ATR/.XFD directory lister. It can extract
individual files from an image disk.
- Turbo BASIC XL 1.5 - An superb Basic compatible with ATARI BASIC

---

* WHICH DOS DO I HAVE TO USE?

* Atari DOS 2.5: The Official standard (A must).
* MyDOS 4.53 : Very good. Atari DOS compatible. It has many added
functions over the standard Atari DOS.
* SpartaDOS 3.2: PC-DOS resemble Atari DOS. Very very good. It can
work with disks formated with other DOS. It can
even
create standard Atari DOS formated disks. But,
SpartaDOS disks cannot be read by other DOS.

There are several other DOS. I suggest you choose one of the
precedent
described DOS.

Other Atari 8-bit DOSes:
* Atari DOS 2.0: Older and less powerful than DOS 2.5
* Atari DOS 3.0: DOS 2.5 predecessor (yes, this is right).
INCOMPATIBLE with almost anyhing! (Do not use it)

* Mach DOS
* DOS 2.5+
* DOS 4.0

(More work needed here ...)

337. RS232 Modems

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-10 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <31e4537c@pianosa.demon.co.uk>
Source record: 82245

Whilst reading the usual rubbish I find here, Damian John Gick wrote something
interesting to All about RS232 Modems:

Hello Damian,

DJG> to my Atari 130XE either using my external RS232 modem, or a null modem
DJG> cable. What is the best way to hook up a normal external modem to an

An 850 or equivalent ar the only way to go, then.

DJG> Atari 8-bit? I read the serial ports on the 850 aren't standard, so a
DJG> 9-pin adapter won't work.

It's true that the 850's pinout isn't the same as PC's. But since the RS232
"standard" is for a 25 way coonector, the PC ain't standard, either.
:-)

DJG> I have an Amiga, so the PC transfer utils aren't possible (though as a
DJG> last resort I'm sure I can steal some time away on one).

I take it that it's the Amiga that's connected? I have the same set-up here.
I've got a data switch box which allows me to change the connection from the
Amiga to either them modem or my 850. BTW, it's okay to switch from one to the
other, whilst the Amiga is powered up. *So* *long* *as* the data switcher is a
break before make, type. Which they all should be, anyhow.

The serial port gets connected to the 850 using a null-modem cable, and I just
use NComm (Amiga) and DeTerm (Atari) to do the transfer.

Message-ID: <31e4429e.759295@news.superlink.net>
Source record: 82247

It's the disk itself that goes bad, so dont use the same ones over
again. The magnetic coating wears off (just like on cassette and video
tape). This can create bit errors (maybe able to fix by re-reading
sector over and over) or hard errors (kiss that stuff goodbye)

As previously posted, I would be happy to convert any and all's disks
over to pc/mac format for nothing, I will even pay return postage.
Just send blank ibm disks (14 atari disks=1 pc disk).
Of course, the software on them gets put in the archive!

Or so you can store files that are larger than a SSDD disk can hold - important if you maintain databases on the 8-bit.

> I think I'll manage with SSDD drives for now.Plus the XF551 doesn't report
> "sector not found" messages corectly thus preventing some games from working.

Games? Games? We don' need no steenking games! <G> Besides, get an 810 for games.

> Also:You can't format the back of a disk.
> (except,of course,that the back gets formatted when formatting double sided)

That's incorrect, I used to format the flippies on my XF551, lo, these many years ago. Don't recall the trick I used to do it, but it can be done.

Boy, does that sound familiar! That is why I'll be at Mistfest
in Indianapolis this Saturday. Hopefully, I'll find a good home
for a lot of the stuff. What I don't sell, I'll post here. The
less shipping I have to do the better.

Hope to see you there.

The MPP modems supported a 450 bps transfer rate, as did
CompuServe. It doesn't sound like a big deal now, but it is a 50%
increase over the 300 bps that was standard and on-line time was much
more expensive back then.

>The Smooth 3D graphics always amazed me.

I don't think that qualifies as "underrated", though; it was one of the best selling (and probably most pirated) titles for its time. Kinda like saying "Archon" or "Zork" were underrated titles. For me, there was a game called "Painter" (I think) which didn't sell well, but was infinately playable. You controled this little house painter guy that ran around a house painting the walls, while avoiding a host of bad guys. A classical music score (The Nutcracker Suite, I think) played in the background.

Sidebar...I heard that some company has created an updated Ballblazer (w/weapons, multiple players, different fields, etc) which will run on Saturn and PlayStation, though I can't remember the name of the company or the name of the game. :-/

The Color64 BBS software for the C64 also supported a 450 baud mode, and
virtually any 300 baud modem could handle it.

It was easier to get 450 baud between two different modems back then than
it is today to get a USR and non-USR 14.4 to talk to each other.

That was "Bristles" from First Star Software (Boulder Dash, Spy vs. Spy).
Very difficult for many, one review called it frustrating IIRC. It was
also covered in a 'cheap game roundup', where some computer games joined
the video game crash. At $3.99 (TRU price) it was a good value.

"Flip and Flop" was another First Star sleeper.

354. Proposal: alt.binaries.atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-11 00:00:00 UTC
From: Rich Tietjens <RichardX_Tietjens@ccm.jf.intel.com>
Message-ID: <31E550DA.261E@ccm.jf.intel.com>
Source record: 82174
Cross-posted to:
alt.config,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.st.programmer,comp.sys.atari.advocacy,comp.sys.atari.8bit

The proposed group would serve as a place to exchange small patches, release small shareware packages and updates to existing packages, post items that have been requested in one of the other comp.sys.atari.* newsgroups, and so forth. There has been some discussion of how to handle Atari binaries since the closing of
comp.sys.binaries.atari.moderated
and the general consensus in c.s.a.s has been that a dedicated newsgroup is needed; it is inappropriate to post large binaries (>16k) in any of the existing groups, and if this proposal is approved, it will then be possible for those users who do not wish to download binaries to simply not subscribe; at present, someone will post a binary from time to time and users who must pay for on-line time, and who do not want the binary, complain (quite reasonably so).

Comments welcome. Flames to dev/null, thanks.

>sector over and over) or hard errors (kiss that stuff goodbye)

I have first hand experience with this. I built the ape cable about a
month ago to back up my 14 year old atari disks. About 2/3 of the
disks backed up fine to my PC. Most of the rest had read errors, so I
had to do a file by file copy to figure out which files were trashed.

The worst problem was that 5 of the disks had degraded to the point
where the head of the disk drive scraped the oxide right off the
disk leaving concentric rings where the mylar disk was visible. I'm
not getting that data back, I tell you. I had to keep the cover off
the drive and clean the heads with head cleaner and a q-tip.

So: the upshot is, build a cable and back it up onto your IBM. Then
toss the old disks into the garbage.

Hmmm, I ran the Balldemo on both PC Xformer and XL-it! just a day or two ago, on a 486DX2/66; XL-it! is definitely both faster and smoother, and has better graphics (the colors are "truer"). Mind you, I'm glad that Darek wrote PC Xformer, but I think XL-it! is advancing at a much faster rate.

ICD is still in business and AFAIK still owns the copyright to SpartaDOS.
Why not send them email (I think it's support@icd.com but it's possible they still
deal through GEnie) and ask about it?

Update: I just tried both on my "new" office system, a Pentium 90. XL-it! is
still faster (looks like an 800XL on speed!), but it won't load MyDOS; PC Xformer
does, and it supports sound through the PC squeaker, so no sound card is needed.
For a low-end PC, Xformer would be a better choice - and if you MUST have MyDOS,
XL-it! still can't do what you need (but give him time...).

That was Bristles, by First Star Software (of Astro Chase fame) and
designed by Fernando Herrera (wonder what he's up to now...)

>Sidebar...I heard that some company has created an updated Ballblazer
>(w/weapons, multiple players, different fields, etc) which will run on

>the name of the game. :-/

Hey, I'm just the fountain of information today.
You're thinking of Battlesport by Studio 3DO for the 3DO system.
Acclaim is porting all of the Studio 3DO titles (arguably, the very cream
of the crop) to Playstation and Saturn.
WiReD put in a brief review of Battlesport in issue 4.07 and spent half
of the column (small column) talking about Ballblazer.

Battlesport is a very very very good and fun game (since it's related
pretty closely to Ballblazer). You've got a ball and goals (I think they
rotate instead of translate along the end of the field) and you're in an
arena w/ ramps and obstacles and you've got all sorts of weapons and
power-ups and tricks up your sleeve and different vehicles to choose
from. Kinda like CyberSled and Ballblazer's bastard son.

363. "Admiral Nuguru" Should Be Avoided

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-11 00:00:00 UTC
From: steveg@cnct.com
Message-ID: <steveg-1107962152410001@news.cnct.com>
Source record: 82183

I would advise everyone who doesn't want to be pestered by a little mosquito of a little boy to avoid any and all attempts at trasactions with the user going under the name of "Admiral Nuguru" (current email: admiral.nuguru@fantasy.com). While I'm sure his ego will get the better of him and I'll see no end of his rantings here and on other newsgroups, I believe it's in the best interest of everyone interested in purchasing equipment that they know my story with him.

A couple of weeks ago I had been looking for some Atari hardware. Nuguru had posted an ad for some hardware I was interested in -- I believe it was an ATR and a 1050 floppy drive. I replied to his ad with an offer; he replied a little while later with a counteroffer. I replied again with a counter-counteroffer that was exactly in between our mutual offers.

Then, I hadn't heard from him in almost a week. The following Friday I received another mail from him repeating his initial counteroffer, though it was worded a little strongly -- "YOU HAVE FAILED TO REPLY" and "REPLY NOW" (his caps, not mine) were among the key phrases that got to me, and the entire message just reeked of attitude. During that week, though, I wasn't idle; I found a few more people selling equipment that I was interested in. I replied to him, telling him that I did indeed send a response (I even quoted the entire response I made) and had been awaiting his counteroffer ever since. I had also told him that I really didn't appreciate the strong phrasing and, because of that and the fact I had found other people, I was no longer interested in his equipment -- "thanks but no thanks".

The next message I get from him is COMPLETELY out of line. He's STILL telling me that I want to buy his stuff, that it's MY fault he didn't read the response I mailed him, and that I'm now somehow obligated to complete the transaction at the price which he just now agreed upon -- LONG AFTER I told him I was no longer interested! By this time, three other people had emailed me (responding to a question I had posted asking about this Nuguru guy) telling me to be wary of Nuguru for various reasons, mostly relating to questionable and/or incomplete transactions and/or flat-out scams. That, coupled with the juvenile attitude that was being laid on me by Nuguru almost from the outset, convinced me to just do away with the entire ordeal. I told him as much in my next reply to him. PLEASE NOTE that throughout all of this, I was NOTHING BUT POLITE!

His next response to me was just plain stupid, and he STILL hadn't accepted that I was NOT INTERESTED in his equipment. He was now DEMANDING that I send him money for this equipment which I no longer needed, and his attitude hadn't changed for the better one miniscule bit. Now thoroughly annoyed, I became rude and told him point-blank what he could do with his

equipment. I also told him that he was now on my bad side, and I was considering sending a few thousand random emails to him just for the hell of it. (Having an ISDN line is really good sometimes, y'know?)

What follows is his latest response to me:

To: steveg@cnct.com
Subject: Re: ATARI Equipment, MUST SELL!!
From: admiral.nuguru@fantasy.com (Admiral Nuguru)
Date: Wed, 10 Jul 1996 15:17:00 +0000
Organization: Fantasy Land BBS * 217-535-1005

YOU ARE IN VIOLATION OF FEDERAL LAW!!!

You owe me $15,000.00 minimum for that harassing mail!!!

YOU WERE INTERESTED, YOU MADE AN OFFER, DEMANDED I REPLY BEFORE THE WEEKEND WAS UP, I DID!!!!

I have that in WRITING FROM YOU...

Then YOU READ LIES posted by my COMPETITORS, and people who have neve4r done business with me, and you ALSO POST YOPUR LIBEL TO ME!@!!!

That's a $250,000.00 fine right there!!

Consider yourself reported to the NET POLICE, and I AM notifying the Police of your continued harassment...

YOU BROUGHT IT ALL ON YOURSELF!!!

YOU sent me the harassing mail saying I refused to respond to a mesage you say you sent, but I never received, I told you to check your server, and then you continue to harass me!!!

DO NOT REPLY AGAIN, if you do, you'll be sued for another $15,000.00, you IGNORANT PERSON (if I can even call you a person....)

Internet: admiral.nuguru@fantasy.com (Admiral Nuguru)
This message was processed by NetXpress from Merlin Systems Inc.

I've notified root@fantasy.com, admin@fantasy.com, postmaster@fantasy.com, and sysop@fantasy.com (just in case) of this guy's behaviour, and a copy of this message is also going to him. I *WILL* mail bomb this guy if he sends me another message of ANY type; he knows this.

So that's that. With this in mind, I *STRONGLY* advise the net community to avoid this guy at all costs, and/or mail bomb him at your earliest convenience. :-)

ICD is still in business, but they sold the rights to SpartaDos
and all of the OSS stuff to Fine Tooned Engineering. Unfortunately, Mike
Hohman of Fine Tooned seems to be temporarily incommunicando.

Version 0.3 for Linux, MS-DOS, Power Macintoshes, Unix and Windows

================================================================================
A Bradford W. Mott production in association with Aaron Giles,
Seunghee Lee, Jeff Miller and Keith Wilkins
================================================================================

Stella 96 is a portable emulator of the old Atari 2600 video-game console
written in C++. It is a work-in-progress and should be consider BETA
level software. However, you can play most Atari 2600 games with this
release. There are five distributions:

* Binary distribution for Linux (stella-0.3-linux.tgz)

* Binary distribution for MS-DOS (stella03.exe)

* Binary distribution for Power Macintosh (stella-0.3-mac.hqx)

* Binary distribution for Windows 95 & NT (stella-0.3-win32.exe)

* Source code distribution for Unix (stella-0.3-src.tgz)

None of these distributions contain any 2600 ROMs and please don't write
asking for ROMs because they're copyrighted! If you own any of the
Atari 2600 Action Packs by Activision you can use those ROM images with
Stella 96.

New in this Version
===================

* Keyboard joystick support is much better

* Paddles are now supported via the mouse

* Many portability issues have been resolved

Supported Systems
=================
```

The following systems are currently supported:

* Linux (SVGALIB, X-Windows)

* MS-DOS

* Power Macintosh

* Unix (HP/UX, Solaris, SunOS, etc...)

* Windows 95 & NT

Distribution Site
=================

The Stella 96 distributions can be obtained from the Stella 96 home page at:

http://www4.ncsu.edu/~bwmott/www/2600

If for some reason you are unable to connect to this page please try again
later. Sometimes the AFS sever goes down and the HTTP sever can't access
my home directory :-)

Acknowledgements
================

The following people have had a big part in bringing Stella 96 version 0.3
to you:

Aaron Giles - Maintained the Power Macintosh version
Daniel Marks - Provided code for the new keyboard joystick support
Jeff Miller - Maintained the Windows version
Bradford Mott - Maintained the core code, Linux SVGA version and X version
Keith Wilkins - Maintained the MS-DOS version

>and has better graphics (the colors are "truer"). Mind you, I'm glad
>that Darek wrote PC Xformer, but I think XL-it! is advancing at a much
>faster rate.

What, he finally put assembly optimizations in it? I did not know that.

But it may interest you to know that Xformer 2.5 is the latest
commercially-available emulator, and it does not have player collisions
or any of that. Xformer 3.0 or later costs some money and is supposed to
have all that stuff fixed.

But I have an 800xl that emulates an 800xl perfectly anyway. Whoever
designed it was a genius of copy-protection, as I haven't seen one
pirated copy of it on the Internet, either. I'll bet the XF people are
pissed.

Hello Yogi,

Y> -is absolutely _nothing_ they can do about it. With freeware, they have
Y> legal recourse against me.
Y> Actually, that went on all the time and Atari did nothing about it! In
Y> fact, they kind of encourarged it by releasing the source code. Can you

True, but back then, even the big companies had a rather (naive) altruistic
attitude. Steve Jobs, Nolan Bushnell, etc, etc, all thought about things like
"the good of the community".

Y> imagine what would happen if Microsoft made available for a minor copying
Y> fee the source code to Win95 or Ms Dos??

I don't think I could handle reading about 75% of the code, it would be too
boring. All those NOP's. :-))

Can anyone tell me if there are any sites carrying the programs for
8-bit Ataris that were published in magazines like Compute, Antic,
Analog, etc.?

Or even whether it's legal for those to be available to the public.

Thanks,

Lou Pirog

Big John's "NO BULLSHIT" Auction

UPDATE # 12 7/ 10/ 96

We're into the going ONCE, TWICE mode now, with all
items currently going ONCE. If an item doesn't receive a
bid by midnight tonight (Weds.) it will then be going
TWICE.

Remember, if you send in a bid and don't get a
response from me, it means I probably didn't get it.
I acknowledge all bids, so if you don't hear from me,
please re-send your bid.

Standard rules are listed at the end of the auction. Please
read them before bidding. If you have any questions,
please feel free to e-mail me.

On to the goodies. Enjoy!
------------------------------------------------------

- Cosmic Swarm (Atari 2600) $40 Bruner
(by Commavid, New in Box, ONCE
Mint Condition)

- Super Cobra (Intellivision) $70 francois
(by Parker Bros., New in Box, ONCE
Shrinkwrapped)

- RCA Studio 2 system $22 Rikard
w/ Blackjack cartridge ONCE
(untested, no power supply/switchbox)

- Prototype Moon Patrol cart $25 Bruner
(Atarisoft for the C=64) ONCE
label reads: Commodore 64
Moon Patrol
Atari Inc. Proprietary
Serial No. 92
1983 Atari, Inc. All Rights Reserved

- Intellivision ECS Computer $30 fenris
Keyboard (rare, brown version. PAL, ONCE
220V. Complete.)
```

- Emerson Arcadia 2001 w/ $24 arton
2 carts (Missile War & Alien ONCE
Invaders) Complete.

- Atari 2800 Cookie Monster $55 mercury
Munch (New in Box, Shrink- ONCE
wrapped). This is a beauty. All Japanese writing
and Atari 2800 logo. I've only seen two of these
and I'm keeping the other one.

- Amiga Joyboard (2600) $15 DaveT
(compatible with Mogul Maniac, ONCE
Surf's Up, and Off Your Rocker)

- Demond Attack (2600) $20 JeffGamer
(NTSC, unknown origin) ONCE
Not a mistake on my part, there is a "D" at the
end of Demon. Completely different artwork than
the Imagic release.

- Tutankham (Intellivision) $65 fenris
(by Parker Bros., New in Box, ONCE
Shrinkwrapped)

- Prototype Swordquest: $25 WDV
Earthworld cart (Atari) ONCE
Standard loaner cart label.
Cart reads: Adventure II, which is crossed out
and has Swordquest written beneath it.

- Frankenstein's Monster (2600) $35 Calypso
(Prototype/New Release cart) ONCE
Cart has red label w/ Data Age logo and serial
no. 0123. Also has copyright info and "Please
return to Data Age" text. Cart has slight wear
and screwholes.

RULES
****

1. Auction runs until July 9, at which time it will
change to a Once, Twice, Sold format.

2. Minimum bid increments are as follows:
-- $1 on items up to $20
-- $2 on items over $20
-- $5 on items over $100

3. In case of a tie, the first bid that I receive will
be designated as the high bid.

4. Payment is to be by personal check or money
order. Shipping will be based on what you win.
I will send shipping info with your winning total.
If you have questions about shipping, please

e-mail me.

5. I reserve the right to stop this auction, alter the rules, withdraw items for trade, or make any other changes for any reason.

6. Send bids or requests to be added to the mailing list to jhardie@usa.pipeline.com

Thanks for reading and good luck!

COMING SOON: ATARI VIDEO MUSIC & 1090XL EXPANSION UNIT

377. Atari Stuff For Sale (HARD DISK, etc)

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-11 00:00:00 UTC
From: dovereem@brutus.acs.ohio-state.edu
Message-ID: <4s267m$h8e@charm.magnus.acs.ohio-state.edu>
Source record: 82259

Hello. I posted a large quantity of items for sale some time ago. I was
an atari 8bit developer and had a great response to my ad. Unfortunately,
one of my deals fell through due to international shipping costs.
Although I did some parting out before, I do not have time to do it again.
I would like to offer everything left as a single lot:

Atari 130XE
Atari Hard Disk System w/adaptec 4000a controller, MIO and drive
(the drive is a 10 meg but any MFM pc drive will do, really)
Atari 800 with OMNIMON modifications
2 Indus GT drives
Happy 810
Happy 1050 (dead as a doornail)
Atari 850 adapter
Some other printer adapter that I have never even used
Maybe some other junk I can't remember I packed
hundreds of games on disk and cartridge
BASIC XE, BASIC XL, MAC/65 Assembler, ACTION!, and more...
A huge pile of books including the popular "mapping the atari"
Atari FACTORY SERVICE MANUALS for most items
Oh, and a monochrome monitor
All cables, power supplies, and such...

All this weighs in at 150 some pounds for shipping.
Continental US shipping will be between 100-200 but you are welcome to
price and pick any shipping you desire.

I am asking 350 dollars for the lot.
Please email if interested to "overeem.1@osu.edu"

Thanks, and have a great day :-)

Long live the 8bits! (and NEXTMAIL is always welcome!)

Have the follwing Atari items available:

EQUIPMENT:

AF551 Disk Drive, power supply, manual, DOS 2.5

130XE Computer (doen't work-something wrong), Good Power Supply,
Manual and cover

300AT Modem by Supra with software

Atari 850 Interface, Power Supply and printer cable.

JOYSTICKS

2- 500 XJ EPYX Joysticks - hand grip really nice
(offer pending on these)

2- Atari joysticks

2- Driving/Knob Joysticks

1 - Suncom Tac 5 joystick

SOFTWARE/CARTRIDGES:
Robotron 2084 RX8033(THIS IS SOLD)
Star Raiders CXL4011
Qix CXL 4027
Antic Magazine Software Disks from May 87 to June/July 1990

I have a lot of software available also: Print Shop, NewsRoom, Games

---

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

$5.00 & S&H for all three

Nothing is guaranteed (sorry)

COD or personal check (with stuff being sent out when check clears).

Buyer pays shipping.

Make offers including shipping.

There are no "Net Police" (unless you're an AOL subscriber, they have a history of
"cooperating" with the FBI to entrap otherwise law-abiding citzens).

Mail bombing is always inexcusable. Very tempting, sometimes, but still inexcusable.

However...

At one time I began writing a cancelbot becasue of idiots like your "Admiral." It wouldn't
be difficult
to finish it. I'd release the source code. A corollary program is the BounceBot, that
simply bounces
unwanted email back to the originator. This has the (desirable?) side effect of
automatically mailbombing
anyone who mailbombs you, if you know it's likely to happen.

Anyone interested in the code?

I considered that, and would have preferred it, but when I submitted the
proposal to one of the group mentors, I was informed that, precisely because
the existing moderated group had been killed at the request of the moderator,
it would be extremely unlikely that a new groups would be approved. Alt. groups
are far easier to create (anyone who doubts that should start counting alt.
groups in his NG file <G>), which is the logic behind the current proposal.

The "existing" group was removed (rmgroup) in March or April. If your
ISP says otherwise, then they aren't keeping up with changes.

That's what I did, sure enough. Don't have any "real" 8-bit hardware any more,
but a friend has promised to unload all of his on me next time he comes into town.

> 3. Use a 1050 <G!>

Yes, well, that wouldn't be using the XF551, now, would it?

Spams can be gotten rid of fairly well with a kill file. One line in mine looks like this:

Newsgroups: *,*,*,*,*

This automatically rejects any article posted to more than 4 newsgroups (I'm thinking of increasing that).

393. 850 Interface driver

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-12 00:00:00 UTC
From: Peter_Johnson@baseview.com
Message-ID: <31E647D6.39D@baseview.com>
Source record: 82126

I just purchased an old 850 Interface module and the Rainbow Atari 800 emulator for the Mac. However, when I run a BASIC program on my Atari 800 to move files from my Atari 800's 1050 disk drive to my Mac, via the 850 interface, it fails opening the connection. Apparently there is some AUTORUN.SYS file that comes on the DOS 2.0 disks which loads a driver that I need. Unfortunately for me, I no longer have my original DOS disks.

Does anyone know where I can get this AUTORUN.SYS file? Please send me email at peter@baseview.com if you can help! (Thanks in advance.)

>
>
A circuit could be built that would allow for the 2nd two sticks with the flip
of a switch, but you would have to switch it back to toggle BASIC or manage
extra memory, and the outputs of the PIA to those devices would have to be
latched so they would not change while the joysticks are being used.

These are up for auction. This will be the first of 3
public post. email for a list of rules (If you need them).
I figure shipping to be about $20 for the Coleco and $15
for the 2600. email bids or questions to: rsumner@tnis.net
Updates will be sent out 6:00 PM(Mountain) every night.
On 7/26/96 at 6:00 PM(Mountain) will start the going once
stage. Hopefully on the 28th these will be sold.

ColecoVision Setup

---->ColecoVision console w/manual and
Donkey Kong w/instructions, switchbox, RF cable,
power supply, 2 joysticks w/Co-Sticklers.
---->Roller Controller w/manual and Slither w/instructions.
---->Expansion module #1(2600) w/Venture(Coleco) and
1 Atari Joystick.
---->Expansion Module #2(Driving Controller) w/manual and
Turbo w/instructions.
---->1 super Action Controller w/Super Action Baseball
w/instructions and score pad.

min $30.00

Atari 2600 Setup

---->Atari 2600 console w/manual and warranty card,
Radio Shack switchbox, power supply, 2 joysticks,
1 set of Paddles, Combat(complete in box),
Super Breakout (complete in box),
Space Invaders(w/box, instructions),
Pac-Man(w/box, instructions).
---->1 set of driving controllers w/Indy 500.
---->1 touchpad w/Star Raiders and overlay.
---->Atari Trek-ball(complete in box)
w/Missile Command and instructions.

min $30.00

I thought posting the charter was a bit premature, but this one is almost perfect.
I suggest we adopt it as the "official" charter.

Again, comments welcome. Flames to root@uni.edu <EVIL GRIN>

The reason Mac joysticks are intelligent is because they are ADB (Apple Desktop Bus) devices that sit on the ADB chain along with the keyboard, mouse, drawing tablet, etc. This approach allows you to have as many peripherals as the bus can power, but the downside is that the devices need to be somewhat self-aware. In addition to the increased number of input devices, the other nice thing about ADB is true plug-and-play -- you'll NEVER see a Mac user reconfiguring a mouse driver ;-).

>faster rate.

Are you sure? XL-it sometimes barely reaches full speed on my 5x86-133,
but is usually running about 80% of the original, While Xformer can run
about 5-7x faster than the real thing on the same machine.

From my experience XL-it is sluggish on a DX2-66,

XL-it is definatly improving much faster, but it still doesn't come close
to the speed of Xformer.

The author says in the documentation that he is working on getting in as
much compatibility as possible before working on the speed.

From these reports, it sounds like that's what he's doing too.

I sure hope he can speed the thing up though, having a dx2-66 myself.

For comparison, the Commodore emulator that most people use is completely
compatible and works with a dx2/66. But, it's shareware now, with, I
think, a $60 registration. That's even steeper than Xformer.

I have gotten a couple of 5200 carts to try with Rainbow, but they are 12k
and 24k in size, respectively.

When i try to load them into Rainbow, it tells me
"Carts must be either 16k or 32k)

Any idea how I could make them fit?

thanks,
Chris Duguid

From: brentsg@worldnet.att.net
Message-ID: <4s4bpb$3je@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 82196

Hello-

I'm trying to use XL-IT .14 with a cart image of MS-PacMan or Kangaroo.

I'm taking the images from the FTP server at ftp2.cyberspy.com/pub/atari8/

under yogis site/binaries.

When I type atari -cart mspacman

or similar, the emulator enters the self-test mode. I've tried the nobasic and such with no success. What am I doing wrong?

Thanks!!

Brent

414. Re: MPP modem power supply needed

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-12 00:00:00 UTC
From: pulliam@inwave.com
Message-ID: <09960611215047.OUI72.pulliam@inwave.com>
Source record: 82199

Don't know if this helps, as I have forgotten what the MPP modem was. The only two Atari modems I remember were the 830 modem which required connection through the 850 interface. I believe that this was their first modem. It was acoustically coupled, and 300 Baud. It required a 24v ac/150 mA transformer power supply, according to my 850 manual. Their second (I think) modem was the XM301, which was a nifty little gray box that was powered from the computer.

These are the only two Atari modems I know about, as I started buying other (faster) modems after that.

Hope this helps!

-with no success. What am I doing wrong?
-

You have to insert MSPACMAN into a disk image, follow link from my
page http://mars.superlink.net/scharles to ivan's utilities, it will
create an ATR image to be used with the emulators. Then boot the
emulator with the command line atari -nobasic dos.atr mspac.atr
(hope you have a dos!) of course, mspac.atr will be whatever you name
the image.
There are NO, repeat, NO CART IMAGES in that archive! They are Carts
CONVERTED to binary load files, from the old pirate days of the 80's.
(This was the only way to get carts pirated then. No emulators!)

: Comments welcome. Flames to dev/null, thanks.

Is there a tag for this group? For example:

alt.binaries.atari Binaries for Atari computers

Also, is there an official charter? The first section at the top is
pretty good, how about something like this?

-----8<-----
This group is intended for the posting of binaries for Atari
computers. Examples of on topic posts include:

- Compressed files for the Atari of any type
- Patches to existing software for the Atari
- New, publically released software for the Atari
- Atari software requested by someone in another group

Examples of off topic posts include:

- Discussions or advocacy of Atari products
- Auctions or sales of Atari hardware or software
- Commercial software (WaReZ)
- MAKE.MONEY.FAST schemes and ECP/EMP

Again, this group is *NOT* intended for the posting of commercial
software. Commercial software may be posted ONLY if the current holder
of the copyright has agreed to allow public distribution of this software.

-----8<-----

How's that? Is it agreeable to everyone?

-Kyle R. Hofmann

I'm a little puzzled (not knowing *anything* about the organization of
the Atari groups, or indeed of the Atari itself): Rich's posting refers
to comp.sys.binaries.atari.moderated, yet that appears to have placed
binaries directly into a non-binary hierarchy. Was any such group ever
officially in existence (being Big-8, it would have had to pass a RFD/CFV
process)? I would have thought the most likely reason for the group to
have been, as Tom puts it, "expunged", is that David Lawrence has
conducted some Augean stable-cleaning. I can find *no* signs of any
comp.sys.binaries.* hierarchy, which is the way that I as a newsmaster
would like to see things remain!

According to my active list, there *is* a comp.binaries.atari.st, which
is indeed moderated. Was it perhaps this group that you and Rich meant?
If so, rather than creating a new group in the alt.* hierarchy (which
might take some time to achieve good propagation), why not simply appoint
another moderator, and start using the group again?

(I'd wanted to cc this response to Rich as well as Tom, but the latter
didn't retain the former's address in the attribution.)

Atari also produced the 835 modem (300 bps, direct connect, beige
800-style case), the 1030 (300 bps, direct connect, ROM-based T: handler,
1050-style case), and the SX212 (1200bps, SIO/RS232 ports, XE-style case).

I support the creation of an alt.binaries.atari newsgroup.

: According to my active list, there *is* a comp.binaries.atari.st,
which
: is indeed moderated. Was it perhaps this group that you and Rich
meant?
: If so, rather than creating a new group in the alt.* hierarchy (which
: might take some time to achieve good propagation), why not simply
appoint
: another moderator, and start using the group again?

comp.binaries.atari.st would be my choice too, especially as we already
get the comp hierarchy on our server.

UW PICO(tm) 2.3 File: /u/jphindin/.article Modified

I'm a newbie to the 8-bit Atari scene, but damn interested and I have few
questions....

Where can I get XFSIO? Lawrence Stavelys link is mucked up and he hasn't
answered my EMails.

What programmes are there around to read Atari formatted disks in a PC
drive? I've tried AnaDisk but the damn thing doesn't dump for some reason
- it just leaves an empty file.

Also, where can I find the format of how an Atari disk is written? I've
tried the Reference Manual (E-Manual ver) but can't see anything on Disk
formatting itself, I suppose that comes under the OS version...anyway,
any help would be much appreciated...

I'm counter-cross-posting most of the 'Advertising on Usenet- How to
do it, how not to do it.

I don't think auctioneers will actually pay any attention to it.
I just think there are 'netiquette' rules on Usenet and
these cross-posted auctions violate the primary principles of Usenet.

The people who do these auctions, I don't remember seeing in the
group I frequent, csa8, they just show up to sell their junk.

KEEP IT UP, AUCTIONEERS, AND YOU WILL LOOSE THE STEEENKING AUDIENCE
YOU ARE TRYING TO MONOPOLIZE ON!

Introduction

Advertising on Usenet is a frequently misunderstood subject. The purpose
of this message is to explain some Usenet conventions regarding
advertising to new users and, hopefully, spare everyone involved a lot of
needless worry.

This FAQ does not attempt to describe in detail all the various ways in
which one can conduct commercial activity over the Internet and attempts
simply to explain the issues involved in advertising in Usenet newsgroups.

The philosophy of Usenet

Usenet started out in 1980 as a UNIX network linking sites which needed to
talk about and receive prompt updates on UNIX system configuration and
other UNIX questions. Message traffic started out at a few messages per

week, but the system was so useful that traffic quickly boomed and Usenet almost immediately expanded to include forums on science fiction, humans and computers, and other subjects.

In the beginning, Usenet was largely confined to educational institutions such as universities and colleges, and to research companies and other commercial enterprises with UNIX machines on-site. It has now grown to include millions of users at commercial sites such as America Online and at companies around the world involved in every sort of business imaginable. Nevertheless, many of the customs found on Usenet today have their origins in the days when Usenet was very small and most Usenet sites were universities.

That these customs and traditions began when Usenet was much smaller and quite different in nature in no way lessens the anger many users feel when these customs and traditions are violated.

One such custom is the tradition and belief that it is rude to advertise for profit in Usenet newsgroups.

Advertising is widely seen as an 'off-topic' intrusion into the discussions of any particular newsgroup (newsgroup is the Usenet word for discussion group or bulletin board). Each newsgroup has a specific set of subjects it is intended to cover, and in order for newsgroups to function as effective discussion forums, it is important that people stay 'on-topic'. If everyone disregarded the particular topics each newsgroup is intended to cover and simply posted whatever they wanted wherever they want, the entire system would break down.

Due to the decentralized nature of Usenet, there is no one person or body which can "enforce" the custom of staying on-topic. It falls on each user to help preserve the culture of open discussion and free speech that Usenet has come to embody by not posting off-topic material.

This, of course, includes advertising. Advertising is by far the most pervasive form of off-topic posting, and therefore, gets most of the heat.

An analogy

If an analogy will help you to visualize the situation, imagine a meeting at your workplace or school.

At this meeting, people are discussing a certain issue -- for example, getting new sidewalks installed downtown or getting new schoolbooks for the elementary school, or what to do about the new product your company is planning on introducing.

In the midst of the discussions on the new sidewalks or textbooks or product, someone walks into the room, interrupts everyone, then reads an advertisement for a local restaurant. He or she then leaves without waiting for comment.

Now imagine if this happened over and over again each time your group tried to hold a meeting. Every time someone tried to make a point, in walks some other stranger who reads an ad for some business that has nothing to do with the subject of the meeting.

It would soon become rather difficult to hold effective meetings, wouldn't it?

Similarly, it's very difficult to keep Usenet newsgroups interesting and useful when people deluge newsgroups with advertisements.

The hidden cost

One of the things that attracts some people to the idea of advertising via Usenet is that it costs so little to do it. You pay $20 or $30 per month for an Internet account, and you can post literally *millions* of advertisements at no additional cost.

But there *is* a cost. Each message you post takes up disk space on each site around the world where it lands. People don't much mind paying for disk space to hold Usenet discussions since they know that people like taking part in those discussions and since they know that it's sort of like mutual backscratching: "I let your messages reside on my site for free, and you let the messages I post reside on your site for free." Everyone benefits from interesting, informative, or amusing discussions, so no one really minds paying for the space.

But there's only one person who benefits from advertising: the advertiser. Sure, you can say that the people who see the ad benefit from the product or service advertised, but when you balance that against what they lose when their favorite discussion group is taken over by non-stop advertising, it's a poor trade.

No one wants to give their disk space for free to someone who selfishly posts a copy of an advertisement to every newsgroup on Usenet.

How to advertise on Usenet

There *are* acceptable ways to advertise in Usenet newsgroups.

1. The on-topic notice

If you have a product or a message that is specifically related to a particular Usenet newsgroup, and you want to let people know about it, it's *usually* all right to post *one* notice about it.

Note the word "notice." A notice is a brief mention of the product with information about how interested persons can find out more. It's not a sales pitch. It's not an advertisement. It's not a "BUY BUY BUY" sort of message. It's a notice.

You are encouraged to make such postings one-time-only. When your polite informational notice starts getting posted every week, people are going to

start getting irked at you.

You are also *strongly* encouraged to keep such postings hype-free. What often works very well is to post information about your services or product and include a contact address, World Wide Web site, or phone number for people to use to get more information.

For example, if you want to post a notice about your immigration law services, you could post a message to alt.visa.us or the various misc.immigration.* newsgroups, where you'd find a large population of people interested in that or related subjects. Posting the same ad to rec.sport.football.college would *not* be appropriate because rec.sport.football.college has nothing to do with immigration law, visas, or becoming a citizen of another country.

One way to tell if a post is appropriate is to look at a newsgroup's charter. The charter is the formal declaration of what is on topic and what is not, and was generated at the time the group was created if the group was created in the so-called Big 7 hierarchies of comp.*, soc.*, rec.*, talk.*, misc.*, news.*, sci.*, and humanities.*. Some other groups have charters as well, but not all -- and if they do, they're often one or two lines in length. Where can you find a charter? Well, in some cases the charter is regularly posted to the newsgroup or is contained in the newsgroup's Frequently Asked Questions files. In other cases, the charter has been all but forgotten. Charters can occasionally be difficult to locate, so you may have to use your best judgment and/or ask someone who's been reading the group for a while if a particular message would be appropriate.

This is not to say that on-topic notices will always be welcome; the proliferation of inappropriate advertisements (ads posted in the wrong way to the wrong place) has resulted in *all* ads, even informational notices posted to appropriate newsgroups, tending to get a cold shoulder. You can help by limiting your ads to *informational* postings posted *only* *where* *appropriate*, and abiding by any local restrictions a given newsgroup's readers have placed on advertising.

2. *.forsale and *.marketplace newsgroups

There are many newsgroups directly involved in selling. You can generally spot them by the word "forsale" or "marketplace" in their names.

For example, rec.games.board.marketplace is a newsgroup where people post for-sale and want-to-buy notices about board games they want to buy or sell.

Similarly, the misc.forsale.* hierarchy is full of newsgroups for buying and selling various computers, monitors, printers, devices, and so forth, as well as misc.forsale.non-computer.*, for selling stuff that's not computer-related. However, the misc.forsale.* policy is rather resistant to *commercial* ads -- the hierarchy is intended as a place to post classified-style ads.

Many parts of the Net have local hierarchies as well where you can post for-sale and want-to-buy ads.

For example, in central North Carolina, the triangle.* hierarchy has triangle.forsale and triangle.wanted, where classified-style advertisements are the rule of the day.

It's generally considered rude, though, to crosspost a notice about your product to every forsale newsgroup, even ones on the opposite side of the country or world. Post your notice only to your *local* forsale newsgroup, if one exists.

3. comp.newprod

If and only if you are with a computer company which is releasing a new product and you want to make word of this new product known to the computing community, you can post a notice to the moderated newsgroup comp.newprod. The moderator of comp.newprod requires submissions to be informative and hype-free so people will use comp.newprod as a reliable way of gaining information.

4. biz.*

There is a hierarchy of newsgroups called "biz.*" which exists mainly for announcement from companies of new products, fixes and enhancements, postings of demo software, and so forth. If your site carries biz.*, and you feel that a biz.* hierarchy group would suit your purposes, go to biz.config and ask for it.

Be warned, though, that if your goal is to create a biz.* newsgroup for posting hype-filled advertisements, no one would read such a newsgroup. People only want to read newsgroups that are of benefit to them; they're not about to subscribe to a newsgroup that's nothing but ads for Bob's Bait and Tackle.

There are a few dozen biz.* newsgroups, some of which get used regularly and some of which are essentially defunct. If your site carries biz.*, you can find out more about the hierarchy by asking in biz.config, biz.general, and biz.misc.

How *not* to advertise on Usenet

Unfortunately, there are just about as many *inappropriate* ways to advertise on Usenet as there are appropriate ways.

1. Posting off-topic messages in unrelated newsgroups

Each message you post to Usenet, regardless of its content, should only be posted to related newsgroups.

For example, you run a rug company. You want to sell lots of rugs. So, you post an advertisement about your rugs in sci.physics. Not surprisingly, a lot of people send you email telling you what a jerk you are.

Why'd they do this, you ask? It's simple: sci.physics has nothing to do with selling rugs. Your ad was as off-topic as if someone had tried to get a discussion going there about the upcoming football season or started posting a lot of messages about their recent vacation.

Suppose you own that rug company, and you regularly read rec.crafts.textiles.weaving. Would you like it if someone started coming in and posting a lot of ads to the newsgroup about ginseng tablets, and then someone else came in and started trying to sell magazine subscriptions, and before you knew it, it became hard to find any actual discussion of weaving going on?

Try to look at it from the other person's point of view. If you'd resent someone posting an ad for *their* product to *your* favorite newsgroup, why would you post an ad for *your* product to thousands of other people's favorite newsgroups?

Remember the Golden Rule: "Do unto others as you would have them do unto you."

2. Spamming

Spamming is defined as posting identical or nearly-identical messages (not just ads, although ads are usually what spammers post) to a lot of newsgroups, one right after the other. Since it's really not that difficult to write a program that will post the same advertisement to dozens, if not hundreds or thousands of newsgroups, a lot of people have taken to doing this.

What's happened to people who've spammed?

They've lost their accounts, been mail-bombed (had thousands of pieces of junk email sent to them), had people call up and yell at them in the middle of the night, had people forward their mail (by this I mean paper mail, not email) to someplace strange, had people sign them up for thousands of unwanted magazine subscriptions, had people send them thousands of pages of condemnatory faxes, and so forth.

Nothing is as hated on Usenet as spamming. It's extremely, unbelievably rude and if you do it, you *will* come to regret it.

This is not a threat -- it's an observation. Any benefits spamming might have brought you will be more than counteracted by the intense public outcry against you in every newsgroup you posted your ad to.

Some members of the media have gotten the mistaken impression that spamming is hated because it's *advertising*. While it's true that Usenet users don't have much fondness for advertising, the real reason spamming is hated so much is because it's unbelievably *rude*.

If you don't regularly read a newsgroup, why would you post an ad to it? In so doing, you're basically saying that you don't care what the people in that newsgroup think or whether your ad might inconvenience them; you're out to benefit yourself. When you spam by posting the same advertisement to hundreds or thousands of newsgroups, you're saying that

your personal profit is more important than the discussions of millions of people.

Would *you* like it if someone came by your house day after day and shoveled several thousand copies of an advertising circular through your windows?

Each copy of the ad takes up disk space on thousands of machines around the world -- and if you post the ad 1,000 times, that's millions of copies of your message that *you* are making other people pay to store copies of. When you spam, you're hogging hundreds of thousands of dollars worth of other people's storage space.

So please, don't do it. I've already explained that *one* copy of an off-topic ad is rude because it has nothing to do with the group it was posted to. Multiply that by a thousand times to get an idea of how rude it is to spam.

A quick note about what happens to spam:

Another consideration against spamming is that Usenet readers developed defenses against it, so it's not very effective. There are quite a few spam detectors running on Usenet, and if one of them detects that the same message has been posted repeatedly to multiple newsgroups, the humans who run those spam detectors will step in and actually *erase* the spamming messages with 'cancel' messages which are honored at most sites around the world.

A common misconception shared by many members of the media is that spam is bad because it's *advertising* and that people who cancel spam are doing so to get rid of *advertising*. In actual point of fact, most Usenet users consider cancellation to be extremely bad manners and something to be done only as a last resort. When spam-cancellers cancel spam, it's done because of the *volume* (posting hundreds of times), not because of the content.

The analogy that's often used is that yes, you have the right to walk down the street and say whatever you like -- but you do NOT have the right to stick your head in someone's house at 3 am and shout through a bullhorn.

So if you *do* spam, you're likely to lose your account, have your personal life made a living hell, possibly get sued by people whose storage space you're taking up, and in the end, not very many people are even going to see your advertisement. It's just not worth the grief you'll get.

Sorry to be unpleasant about it, but spam's a really bad idea.

Finally, if you're wondering where the term "spamming" came from, it came from a Monty Python sketch in which the characters were in a restaurant which mainly sold Spam. Items on the menu included things like "Spam, Spam, Spam, eggs, ham, and Spam." Whenever the waitress recited the menu, a group of Vikings in the corner would chime in with her, chanting the

word "Spam" over and over, drowning out everything else.

Some members of the media have spread the explanation that the word "spamming" derives from throwing chunks of Spam into a fan. This is not where the term comes from.

3. Unsolicited junk email

Another often-practiced and often-punished scheme is to send email to thousands of strangers whose addresses you found in various Usenet newsgroups. In the last year, dozens of people have lost their Internet access after sending thousands of strangers ads for timeshare condos in Cancun or dubious credit schemes, and yet, the junk email continues to flood in.

Suffice it to say that junk email, using Usenet posters' addresses, is a really bad idea. Most sites will yank your account if you do that kind of thing.

4) 'Mail-Merged' ads

Some advertisers noticed that it was only *identical* postings that were getting cancelled by the spam cancellers, and cleverly came up with a way to post their ad to dozens of newsgroups while varying a line or two to make it look sufficiently different to avoid being cancelled.

For example, one book editor posted ads to dozens of newsgroups about his book, essentially giving a sales pitch for said book, while adding a paragraph to each article that purported to contain the text that had been printed about each newsgroup in said book.

It was rather obvious that the editor wasn't interested in getting feedback on the text since the book had already been published; eventually an employee at the company admitted that the technique had been used to try to avoid triggering the spam cancellers -- and that the point had indeed been to broadcast the ad widely without getting cancelled.

Don't do postings that say things like "Congratulations, REC.FOOD.DRINK.BEER reader, you are among the lucky few to be included in this amazing offer." Spam that makes a token effort to relate to each newsgroup it's posted to is still spam, and will still be erased on sight.

Conclusion

To make a long story short, off-topic advertising and advertising that equates to a bullhorn stuck into someone's window in the middle of the night are bad ideas.

Please exercise restraint and don't make the mistake many have of thinking that just because there's no central authority that can punish you for spamming newsgroups, that there will be no consequences if you do.

There will be consequences if you spam -- and you might be surprised by the lengths that vengeful Usenet users can go to when someone spams their favorite group with yet another off-topic advertisement.

If you want to advertise on Usenet, you can, but please follow the tips contained in this document's "How to" section and don't make the mistakes listed in "How not to do it."

Stay on topic; keep your notices hype-free; only post your notices to newsgroups where they are appropriate.

Do unto others as you would have them do unto you.

Afterword: Advertising on the Internet

It should be noted that there are many ways to advertise on the Internet that don't involve Usenet at all.

Usenet, you see, is NOT the same thing as the Internet. Usenet is transmitted via the Internet, but is also transmitted via other means (see "What is Usenet" in news.announce.newusers for more information). The Internet also includes services like ftp, telnet, gopher, and the World Wide Web.

A World Wide Web page allows you to put up graphics, text, and sound in an interactive hypertext format that's remarkably easy to set up and use. Many thousands of companies and individuals and organizations have put up World Wide Web pages that can be viewed by anyone around the world with a Web browser such as Mosaic or Netscape.

Since the only people who see a Web page are people who *choose* to see it, and since the person who pays for the storage space necessary to hold the Web page is the person or business or organization who put it up and designed it, a Web page is a *much* better way than advertising on Usenet to put your company's information up on the Internet.

If you need help getting going, ask the people who run your site for help on getting started; usually, all you really need to do is go buy a book on basic HTML (Hyper-Text Markup Language) design and/or scout out the newsgroup comp.infosystems.www.authoring.html. It's really not that hard to set up a Web page, and it's much, much, much more neighborly to put your advertising message on a Web page than to barrage the readers of Usenet.

IF YOU HAVE FURTHER QUESTIONS:

A board of experienced Usenet users stands ready to help suggest non-destructive ways to use Usenet for your commercial purposes. Send mail to commerce@acpub.duke.edu if you have questions or would like help.

>in there,

You could try bypassing the moderation. Pretty simple to do. Left as
an exercise for the reader.

> I would like to add my support for either a new binaries group for
>the ATARI platform or making the existing one none moderated? if that
>is an option?

It is a Big-8 group, and if you can prove that the moderator is not
doing the job he signed up for, you can put forth a proposal to replace
him or to remove the moderation. (Note this will make it the second
comp.binaries.* newsgroup to not be moderated, alongside comp.binaries.-
apple2 which has never been moderated and still gets people posting
non-binaries to it.) Comp.society.folklore went through a vote to
remove moderation (it failed, but a new moderator did get appointed and
it now gets traffic). Take the cause to news.groups and put together a
complete proposal for submission to news.announce.newgroups.

I myself have no vested interest in the topic. I'm only suggesting a
course of action.

Followups directed to news.groups.

XL-it absolutely flies on my Pent-133. I get above 180 frames/sec
when running from dos, and around 100 when running under win-NT, both
with sound support on. I don't know why it is so fast on mine, but it
is!

I think I should write some words about this thread.

XL-it! actually renders every frame ! I make no checks if
something changed on the screen or not. This means that the
emulation speed depends not only on the CPU but also on the speed
of your gfx-card in raw dosmode. (Rick: I think that you
own a good card if XL-it! runs that fast).
Short example: I had 55 fps (without sound) with my
486DX-50 VLB Cirrus Logic and with my Cyrix 6X86-P120+ and
a PCI ATI Mach 64 I have about 80 fps.
This speed-gain is only caused by the fact that the CPU-emulation
is faster and the gfx-conversion. But the transfer to VGA-RAM
is still as slow as with the 486 !

My GFX-conversion routines are ways faster than those of XFormer
but XFormer checks if something changed on the screen. This leads
to the fact that XL-it! performs bad (compared to XF) if there is much
static on the screen (e.g. the famous "for x=1 to 10000:next x"
benchmark).
But if you play a game or run a demo that is not full of static
XL-it! runs faster than XF.

Bye,
Markus

PS: Please don't see this as a flame against XF !!

How do you configure the Adaptec 4000a for SCSI ID 3? Do you simply put a jumper across EF? Have it that way now and dont get any access on the drives coming off that controller.

Any help appreciated.

Cross-posted to: alt.config,news.groups,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.st.programmer,comp.sys.atari.advocacy,comp.sys.atari.8bit

[When the topic was changed to the above, the thread was cut-off from all
the Atari groups to which the original thread had been cross-posted.
Since Jonathon is providing some serious and significant information, I'm
merely intervening to re-post to those groups. It would appear that
there's been a vote on this before: where were all you guys at the time?
(Given that those who might want to do as Jonathon suggests already have
access to relevant "warez" group.) Once again, I no nothing about Atari
but am just a bystander that's interested in the machinations within
alt.config.]

453. Atari Binaries - Inaugural Message

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-13 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <552425755.432033.A.starship@3rdplanet.com>
Source record: 82162
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.advocacy,comp.sys.atari.st.tech,comp.sys.atari.programmer,alt.binaries.atari,alt.binaries.atari.d

This message inaugurates both alt.binaries.atari and
alt.binaries.atari.d

CHARTER:

alt.binaries.atari is for distribution of freeware, Public Domain, and
shareware patches, programs, etcetera, intended for Atari and
compatible computers. alt.binaries.atari.d is for discussion of the
content of alt.binaries.atari and should never contain binary files.

The following are explicitly inappropriate for posting to either
alt.binaries.atari or alt.binaries.atari.d:

- Copyrighted software without the EXPLICIT permission of the
copyright holder to post the software.

- "Chain letters," "get rich quick" schemes, for sale messages,
or commercial solicitations of any kind.

- "My computer is better than your computer" messages, or
discussions of the relative merits of any computer system. These
discussions properly belong in the various .advocacy groups (or
alt.flames in some cases).

- Any posting whatsoever by Peter Sinclair-Day; he does not own
an Atari or compatible computer, does not use an Atari or
compatible computer, and does not hold the copyright to any known
software.

Very large binaries (e.g., in excess of 500k) should be uploaded to an
ftp site (or several) first, and the availability (with full path)
announced in a.b.a; only in the case of a specific request by a user
who has no ftp access should such large binaries be posted to the
newsgroup.

It is suggested that a short text message be posted in a.b.a
immediately before posting a binary, explaining the purpose of the
binary, the copyright status and distribution policy pertaining to the
binary, system requirements for use of the binary, and any special
information which may assist in determining the desirability or
undesirability of downloading the binary.

This is an unmoderated group. However, it will be closely watched by
the undersigned, and any blatant violation of copyright law will be
immediately reported to the violator's postmaster and the copyright

holder. Violations of netiquette will be referred to the appropriate
postmaster if it is deemed necessary.

Could someone give me some basic information on how to play either Eidolon
or Koronis Rift? Moving around is simple enough, and I can shoot, but
there's obviously something else to it.

: Any help appreciated.

: --
: @ @ @ ------------------------------------ @ @ @
: @ @ @ James King - jeking@xmission.com @ @ @
: @ @ @ ------------------------------------ @ @ @
: Atari 8bit hobbyist by choice, MIS Professional by accident!

--
Well, in the Adaptec manual here is the definition of the jumpers

Installed Removed

a-b lsb of controllers SCSI address bet =1 bit =0

c-d Controllers SCSI address bit =1 bit =0

e-f MSB of Controller's SCSI address bit =1 bit =0

g-h DMA transfer rate sysclock/4 dataclock/2

i-j extended command set enabled disabled

k-l not used

m-n suport of syqest 312 ,
DMA 360 and drives that drop SEEK
COMPLETE signal during head switching enabled disabled

o-p self Diagnostics enabled disabled

r-pu * Write precomensation turned off
for both drives enabled disabled

r-s * Write Precomp starts at same
cylinder as reduced write current
for both drives enabled disabled

r-t * Write Precomp is applied to
all tracks for both drives enabled disabled

Note: * denotes that these jumpers are for the ACB-4000a only, they
are not present on the ACB-4070

So, mupers a-b, c-d and e-f are used to select the controllers SCSI ID or address. They determine how the controller will be identified when installed in the SCSI bus.

Do not forget that resistor packs must be removed for drives "in the middle".

Willy

457. Atari disk format info + questions

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-14 00:00:00 UTC
From: jphindin@atlantis.actrix.gen.nz
Message-ID: <4s9q0m$3dt@atlantis.atlantis.actrix.gen.nz>
Source record: 82070

I grabbed this little excerpt from Analog Computing (April, 1985):

<>SNIPPING EVERYWHERE<>
A typical single-density DOS 2.0 disk is organized into 720 sectors of
128 bytes each. The first three are the boot sectors. Sector 361-369 (8
sectors) are allocated to the disk directory, which can hold 64 files.
Each directory entry is 16 bytes long and, along with the filename,
contains information about the file type, its length in sectors and the
starting sector number. One more sector, the Volumne Table of Contents
(VTOC, sector 360) is reserved for system use; DOS keeps track of which
sectors are already in use and which are free.
The remaining 707 sectors (sector 720 is unused by DOS) are data sectors.
Each contains 125 data bytes (0-124) and 3 control bytes. The control
buytes tell which file the sectors belongs to, the number of bytes in the
sector and which sector number comes next in file.
<>END<>

Can anyone find anything wrong with the above?
Also, what the article fails to mention is tracks. How many sectors per
track? Or does the disk controller work this out manually?
I intend to make a programme which will read Atari 92k disks in a low
density 5.25" PC disk drive - which should be _fun_ :)
Anyway, any help would be very much appreciated.

Thanks all.

461. Re: bincancel:10 large binaries:AR486:@@NCM

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-14 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-486.a@redpoll.mrfs.oh.us>
Source record: 82074
Cross-posted to: alt.retromod,comp.os.ms-windows.win95.misc,comp.sys.atari.8bit,news.newusers.questions,rec.humor,rec.music.makers.guitar.tablature,rec.sport.baseball,rec.toys.action-figures,sci.geo.geology

Large binary posts do not belong in unmoderated discussion groups.

I run a program that searchs for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierarchies.

I have issued 10 cancels for large binary files (average size 291,546
characters - total size 2,915,459 characters) posted to 9 different
unmoderated discussion groups in the comp, misc, news, rec, and sci
hierarchies as follows:
2 misc.test
1 sci.geo.geology
1 rec.toys.action-figures
1 rec.sport.baseball
1 rec.music.makers.guitar.tablature
1 rec.humor
1 news.newusers.questions
1 comp.sys.atari.8bit
1 comp.os.ms-windows.win95.misc

This pointer is being posted to each affected group listed above,
with the exception of test groups. Follow-ups are directed to
news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.announce. The
full report can also be found in alt.nocem.misc and alt.retromod.
Look for AR486 in the subject, or, if your reader supports it, use
this URL: news:ARMM-Report-486@redpoll.mrfs.oh.us

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated akr, biz, comp, misc, news, rec, or sci
(except for comp.binaries.apple2, comp.bugs.2bsd,
and rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

If you must post a binary to Usenet, please post it *only* to an
appropriate binaries newsgroup such as alt.binaries.misc, and do *not*
crosspost it to non-binaries groups. Then, if you like, post something
in the appropriate discussion group telling people where to find the
binary in the binaries group (a pointer to the binary). This will
permit news administrators and users to decide for themselves whether
to receive the binary files.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

Okay. I've received many answers to this question before, but I've never got this to work. Is there ANY way to write an Atari disk using an IBM PC. I have Atari DOS II running on my 65XE with an XF551 disk drive. What program can i run on the IBM to write this type of Atari disk? I need an exact answer. I've tried to use UTIL and MyUTIL to do it, but neither works and neither comes with any true documentation to tell me if I'm doing something wrong. Could someone please help! I would love to use this 65XE!

Add Jumpers, A - B & C -D only. Jumper E - F alone makes it ID 4.

-I intend to make a programme which will read Atari 92k disks in a low

-density 5.25" PC disk drive - which should be _fun_ :)
-Anyway, any help would be very much appreciated.
-
Who has low density PC drives anymore? It would be a lot more
convenient, thats for sure.
On a single density disk there are 18 sectors per track. On an
enhanced density disk there are 27 sectors per track (total of 1040
sectors). On a double density disk the first 3 sectors are Single
density, the the other 717 are double density.
I believe there is a program called MULE (not the game) that attempts
to do what you are trying to accomplish, you might take a look at that
to see if it helps.

466. Xformer Users: How Can I Save the Screen as a GIF?

ECP is "Excessive cross posting", also known as spam. This is when you
dump as many newsgroups as your news server into the Newsgroup: line and
send out a message.

EMP is "Excessive multi posting", also known as spam. This is when you
find all the newsgroups you can and send out a separate copy of your post
to each one.

Both are Bad Things.

Ok, I've got the emulator (Rainbow) and I would like to create
ROM images of the cartridges that I have. How do I go about
making images of them? I managed to create the one of the
Basic cartridge using the documentation in the demo release.
I also have OSS's Action! and Basic XL as super cartidges.
What is the procedure for making images of these bank switching
cartridges?

Thanks,

-Mark

The difference between c.b.a.s and a.b.a is that c.b.a.s was an ST only
newsgroup. ST only means that all other Atari submissions must be
rejected by the moderator. a.b.a is (will be) a generic Atari software
group --- if someone has a piece of Atari software from any pltform that
they'd like to post (that's not WaReZ), they can post it in a.b.a and be
within the confines[1] of the charter.

> occur on a group.

How sad. It used to be, before the Internet became the playground of any loon with a few hundred bucks to blow at Computer City, that the newsgroups were largely self-policing and self-regulating and DID largely follow their charters. That doesn't seem to be the case today, as noted in [1] and [2] above.

For one thing, the charters and general policies are all but completely INVISIBLE, until and unless an alt.config (what IS that group for, anyway) or similar thread talking ABOUT a group, "spills over" INTO the group being discussed! Heck, I just now fell into this discussion "by accident" myself, having caught it in c.s.a.8 and having never before posted to any of the other three groups this post is going into (to say nothing of the N groups I can't post to due to those aforementioned Portal shortcomings). Just where, and how, and when, is the average Internetter supposed to encounter any form of documentation, instruction, suggestion, or signage, telling him anything more than a newsgroup's NAME already does? I've never seen anything, in over eight years on three or four ISPs. I say, make this information more visible in the first place.

If that doesn't work, then we have a good argument for making ALL newsgroups moderated. That's a hell of a shift, and would require a hell of an investment of someone's time, and would undoubtedly slow down and screw up the usefulness of the Net at large, but it WOULD eliminate the problem of off-topic posts pretty much ENTIRELY. If it could be shown that the advantages of a fully-moderated Usenet News organization outweighed the disadvantages, I might even support the idea myself -- and I'm a longtime and outspoken opponent of all authority and government beyond the most minimal self-regulation. (If everyone were more like ME, the problem not only would go away,

but would never have come up in the FIRST place. ;-) It's a darned shame that, left to themselves, most people seem to behave as though they're lazy, ignorant, or BOTH, prompting some OTHER people to feel the "need" to "govern" the rest.)

In this instance, Portal is correct; I'm sorry, I must have unconciously added
the ".st" in the middle of that.

> I for one have been right here on comp.sys.atari.8bit on and off for nearly

I can email you a complet newsgroups list, if you need it. It's rather bulky
at about 350k, but if Portal won't tell you waht exists, I will. IMHO, any
and all "warez" groups that exist are pirate groups, and I won't subscribe to
them, even if I can find them (there are several listed in my NG file).

Not only that, but an unmoderated group doesn't depend on the whims of one
person to give it content.

> This is probably a relatively valid reason for removing a group.

This would be a valid reason /IF it were true/, but it is not. Submissions
wer made - and ignored. I submitted several files in the omnths prior to the
group's demise, and I have seen others state the same thing; no response was
ever forthcoming from Annius. I don't know if that means he did not get the
files, or simply chose to ignore them.

> > The Atari ST is no longer a very active platform,

It's tantamount to saying that "the 286 is not a much used chip any more, so we will no longer write software that does NOT use 386 opcodes." Granted, there is a lot of software that won't work without those opcodes - but probably 90% of the current DOS-based software, including most network drivers for Novell networks, work just fine on 286 boxes. I doubt that the owners of those networks using 286 servers and clients would be very favorably impressed by anyone who told them that they would be required to give up their existing hardware platforms.

It's also the way things are done, and frankly, it blows. Getting an alt. group for Atari binaries effectively removes the controls exercised by the "Big 8" cabal (and such a cabal obviously exists, else it would not be necessary to put a new group proposal to a "vote").

The fact that the question was posted in comp.sys.atari.st is true. The allegation that "the vast majority agreed" to rmgroup it is either a mistake,

or an outright lie. Since I don't know if the person making the statement
knows the truth or not, I will assume it's a mistake.

There is no longer such a group, Greg. It was removed some months ago
(March? April? May?) at the request of the moderator, and over the
objections of the users (the few of us who knew that the group existed).

We're not replacing a flat tire, we're replacing a stolen car.

MULE worked for me but it reads only double density disks.
The tool is able to write to dd-disks, as well. But this
was not successfull on my system (probably because of the different
speeds of the atari-drive <-> pc-drive).

Bye,
Markus

(1) I voted to retain the group.

(2) The "vast majority" did not agree to anything. Perhaps a dozen people
were even aware of the existence of the group, and I saw exactly one person
(other than Annius) stating in a comp.sys.atari.* group that they agreed
the group should be removed.

(3) It is my belief that Annius simply didn't want to expend the effort to
moderate the group any more. Note that this is my personal belief, with no
evidence to support it. However, read on...

(4) I submitted several binaries for distribution during the last month of
the group's existence. They never appeared in the group, nor was their receipt
by Annius ever acknowledged.

I believe that there are large numbers of Atari users who have no or very limited
ftp access, who would use an unmoderated binaries group. I know for a fact that

the largest ftp sites for Atari files are very slow to post new binaries to areas where they can be obtained (I have personally uploaded 2 binaries to several sites; both have been obsoleted already, and they aren't available to the public yet).

I can relate. My personal opinion is that Portal has the worst service
of any of the "default" providers signed up with Netscape Personal Edition.

> For one thing, the charters and general policies are all but completely

That won't happen with alt.binaries.atari becasue I have a messagebot to
post the charter every 2 weeks, even if nothing else ever gets posted.

The problem began in the Sixties, when it first became necessary for both parents
to work outside the home in order to support the accepted lifestyle of the
entire family. In the scramble, someone forgot the teach the kids basic courtesy.

However, I oppose moderated newsgroups in general, and indeed, have " *.moderated*"
in my kill list, now that the one atari binaries group is gone. If I wanted
someone else to form my opinions for me, I'd be a Republican, not an indepedent.
(That ought to garner some major flames! <G>)

Really? I'm here on a T-1 line direct to the USenet backbone: I tried
to get a.b.c.a, with the following results:

News host responded: No such group

So, if your service shows that such a newsgroup exists, and it has
existed more than 6 months, I think perhaps either your sysadmin or mine
is mistaken. Mind you, I'd be happy to be wrong.

485. Info Soft 7000 cart

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-15 00:00:00 UTC
From: "Mr. Maddog" <mrmaddog@prolog.net>
Message-ID: <Pine.SOL.3.91.960715183423.18506A-100000@ns1.ptd.net>
Source record: 82092

I picked up an 8-bit cart at a thrift store called InfoSoft 7000, would anyone know exactly how to work it? It said on the label it's a "high resolution graphic display" or something. From what little I gathered, it might like something that was used at my college for displaying messages and notices on TV screens. Yes, they did use an 8-bit Atari :)

Any takers, please e-mail. Thanx...

Eric Noss

I'm not going to take the time to check out the archive, Ron, but if what you say is true, and the purchaser sent his moiney via the US Postal Service, he should file a complaint for mail fraud with the Postmaster in his town, in Decatur, Illinois, and the Postmaster General in Washington, DC. Mail fraud will get him off the net and into a nice, cosy cell.

Umm... guys, I went through the trouble of creating
alt.binaries.comp.atari8bit a while back - why not use
it? I can think of only two reasons:

1) The 'binaries' part of the group name will automatically
ban it from some news servers.

2) The 'alt' part of the group may do the same.

The only thing that would really be better than the
existing group would be a new one in the 'comp.*' hierarchy (sp?).
If someone wants to try and push that through, I say 'go for it'!
```

Get any old DOS or Windows screen capture program.. NeoGrab, and the
capture feature of Paint Shop Pro are two I can think of..

That's how I did it with XL-it! (and this works with XF, as well):

As you use Win95, you can run XF in a window. Now mark the
complete screen and make a copy (to the clipboard).
Now start paintbrush (or Paint Shop Pro or ....) and make a paste.
That's all.

Bye,
Markus

>the Atari groups to which the original thread had been cross-posted.
>Since Jonathon is providing some serious and significant information, I'm
>merely intervening to re-post to those groups.

Alas, since Portal neither shows me the entire Newsgroups line, nor accepts it as-is, nor lets me edit out the group(s) it doesn't like while leaving the rest, you're going to have to intervene AGAIN, because I'm ONLY posting, am only really ABLE to post, this to comp.sys.atari.8bit. Thanks in advance for propagating this; may I request that "comp.sys.atari.st.programmer" be removed from the distribution? That's the group Portal says doesn't exist, causing all my problems in this instance...

>It would appear that
>there's been a vote on this before: where were all you guys at the time?
>(Given that those who might want to do as Jonathon suggests already have
>access to relevant "warez" group.) Once again, I no nothing about Atari
>but am just a bystander that's interested in the machinations within
>alt.config.]

I for one have been right here on comp.sys.atari.8bit on and off for nearly ten years, and have only occasionally seen reference to a "warez" newsgroup, and never quite the same name twice, or at least not regularly. Moreover, no ISP on which I have had an account -- and there have been three of them; four if you count TWO different systems here at Portal -- has ever been aware of the existence of, or willing to pick up, or has for that matter even acknowledged recipt of my requests to pick up, ANY Atari-8-bit-related "alt" or "binaries" group(s). I barely even know what groups EXIST.

And I suspect it is much the same with MANY of the participants here who are today asking to create a newsgroup which some OTHER people may say has already existed and been largely unused for a long time. If the group(s) have/has existed for so long, how come it's been completely INVISIBLE for most of the last ten years? It's like expecting a New Guinean Stone-Age tribesman to carry automobile insurance when he's never even encountered the concept of an automobile. We can't use, and can barely even ask about, what we don't know exists, can we?

> Once again, I no nothing about Atari
> but am just a bystander that's interested in the machinations within
> alt.config.]

Whereas I am just an Atari (and a couple of other subjects) person who knows nothing about "the machinations within alt.config," nor about the

term "Big 8" (this is the first time in MY eight years of Internetting
that I've heard that term), nor about the goings-on in "news.groups,"
"news.announce.newsgroups," "rmgroup messages," or much of ANYthing
mentioned in some of the material you quoted. I wouldn't have the fain-
test idea how to go about creating a newsgroup, locally -or- Net-wide,
and I'm self-centric enough to believe that more people are like ME,
i.e. ignorant of such things, than like YOU (or those whom you quote),
i.e. knowledgeable about them. So you'll have to forgive us if we
don't know the rites, rituals, invocations and protocols of doing these
things, and/or aren't "up on" the latest happenings in these areas.

> Since the comp.* group died for lack of use, I expect the alt.* group
> would have the same lack of use

Unless the alt.* group's existence happened to be made widely known, as
evidently did NOT happen with the comp.* group?

>--unless the supporters of this group
> are primarily interested in a place to illegally repost copyrighted
> software.

You mean, the way it is regularly done on various Commodore-64 and/or
Apple II FTP sites, archives, Web pages, and so forth, without apparent
concern from the copyright holders? You mean, the way Atari 8-bit users
want to do the same thing, as has been discussed to death here for at
least the past year or two? I suppose the occasional illegal repost might
occur, sure enough.

> comp.binaries.atari.st should be removed. Despite the continued
> presence of a capable moderator, its submissions declined to the point
> where virtually nothing was valid for the group.

This is probably a relatively valid reason for removing a group.

> The Atari ST is no longer a very active platform,

This most certainly is NOT a reason for removing a group, and it disturbs
me that, even though it is not the SOLE reason given, it is obviously being
used to "support" the suggestion/recommendation/decision to remove a group.
Granted, the Atari ST is no longer a "major" platform in terms of the PER-
CENTAGE of computer users using it -- but the Internet is big enough these
days that ANY subject, no matter how obscure or "inactive," can collect
enough interested parties to sustain an ongoing discussion. There's still
an active Rubik's Cube mailinglist, for crying out loud! Kill the newsgroup
for OTHER reasons if they exist, surely, but don't justify it on the basis
that the subject matter itself is "no longer very active." That is not
the point.

> and access to FTP and WWW have improved
> to the point that they make a much better primary distribution
> channel.

This may be true to SOME degree, but not entirely. And speaking as someone who doesn't like, doesn't want, can't afford, and ISN'T GOING to upgrade to the latest-and-greatest platform every time a new technology comes out that my old system(s) can't handle (I have fifteen computers and not one of them runs Windows or any form of graphical Web-browser), I'm always nervous, often irritable, and sometimes even ANGRY, when people blithely discontinue, or talk about discontinuing, an old, reliable, still usable technology on the basis that "everyone SHOULD be," and/or "most people ARE," using some NEWER thing. Sure, that'd be nice for YOU, but it's unrealistic and selfish, maybe even unethical, for you and others who reason the way you do, to NOT continue to support older technology, IMHO. Check the Usenet archives for my numerous rants on THIS subject in groups like comp.os.vms and one or another (I forget which) of the Windows NT groups...

> Annius V. Groenink <avg@cwi.nl> posted messages to the group asking
> whether anyone still found it useful and the vast majority agreed that
> the sensible thing was to remove the group. At the request of the
> moderator and the readership, it is now removed.

Well, that's something anyway. I'm glad that SOME sort of "readership" was consulted -- but WHAT readership? Of what group? Of the group being removed? I hope so; I HATE it when some "elite" makes decisions that affect the masses, without consulting those masses. Go watch "Fern Gully." :-)

The group has been rmgrouped; if you show it as active, then you missed the
removal message. I wish everyone had.

Yes. Commercial advertising of any kind is inappropriate outside of the
business groups (with some minor exceptions - the .announce group would
be the right place for "reduced price" announcements that specifically
pertain to that type of system, I think).

Well, someone get a proposal together and send it in to
news.announce.newgroups, or track down the existing moderator and ask
him to resign his position and appoint a new moderator (or moderators)
that will do the job.

When your car gets a flat tire, you don't buy a new car. You get a new
tire, and a new spare tire too.

504. 8-Bit Equipment MUST SELL!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-15 00:00:00 UTC
From: terry.ortman@fantasy.com
Message-ID: <19960715165756.aaaa0060C@babyblue.cs.yale.edu>
Source record: 82111

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

Source record: 82112

I could be wrong, but I believe I saw earlier that fanatasy.com is his site, so it doesn't do any good to inform them. You might want to do a usenet search using dejanews or altavista or any other usenet search engine..you would be amazed at what you will find. Just search for "terry ortman" or "admiral nuguru".

Jeff

I have a few offers, this is what i have: i will remove it from the list once I ship it. Thanks, I hope someone needs or wants this stuff

EQUIPMENT:

AF551 Disk Drive, power supply, manual, DOS 2.5 $100

130XE Computer (doen't work-something wrong), Good Power Supply, Manual $10

300AT Modem by Supra with software

Atari 850 Interface, Power Supply and printer cable. $50

2- 500 XJ EPYX Joysticks - hand grip really nice

2- Atari joysticks

2- Driving/Knob Joysticks

1 - Suncom Tac 5 joystick

SOFTWARE/CARTRIDGES:
Robotron 2084 RX8033
Star Raiders CXL4011
Qix CXL 4027
Antic Magazine Software Disks from May 87 to June/July 1990

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price $21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Nothing is guaranteed (sorry)

COD or personal check (with stuff being sent out when check clears).

Buyer pays shipping.

Make offers including shipping.

It matches my recollections.

> Also, what the article fails to mention is tracks. How many sectors per
> track? Or does the disk controller work this out manually?

40 tracks. Physcially, it's the same as an MS-DOS layout, but with 128-byte
sectors instead of the 256 or 512 bytes in MS-formatted disks.

> I intend to make a programme which will read Atari 92k disks in a low
> density 5.25" PC disk drive - which should be _fun_ :)

It's also quite possible. There was such a beast in the Army PD library,
though it was pretty slow and a horrible kludge.

Good luck!

I see that there is a game called METEOR in "Justins" archive on ATR image
#99. DO you have access to that?

Happy Computing, from Doug Feldman in Ann Arbor, MI

510. New utilities for APE/Emulators

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-16 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <31eb142a.1025943@news.superlink.net>
Source record: 82021

There are 3 new utilities for use with APE or emulators. MENU.ATR is
for emulators, It is made to be booted and will binary load any binary
file on D2:.
WARPLOAD.ATR is the same program for use with APE, it lets you load
w/o dos D2: binary files at warp speed. (3x with ape).
WARPBOOT.ATR is a program to boot disks loaded as D2: with APE.
You load warpboot.atr as D1: and the disk to boot at warp speed as D2:
All three are available at http://mars.superlink.net/scharles
Sorry! The APE ones only work on xl/xe series!

511. FS/T: Atari 8-bit computer items [07/16/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-16 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4sf9ep$1v1@dfw-ixnews10.ix.netcom.com>
Source record: 82022

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 07/15/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. For faster service, please
include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) No package deals on games or systems. All prices are clearly
listed.

6) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

7) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

8) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 5.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$10.00 River Raid (Activision)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 130XE Personal Computer Owner's Manual (132 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 9.00 Atari DOS 2.5: 1050 Disk Drive Owner's Manual (147 pgs.).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).
$ 9.00 Inside Atari BASIC [Atari / Reston] (183 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio
Shack for $7, plus tax. It allows for the connection of both 300 OHM
and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1200XL COMPUTER.

This item has not been tested.

$19.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #5

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #6

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #7

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

><>SNIPPING EVERYWHERE<>

[Even more snipping - CFC]

>Can anyone find anything wrong with the above?

I would have mentioned DOS' non-usage of sector 720 right inline with the rest of the discussion of what sectors were used for what purposes, rather than as a parenthetical remark in a later paragraph. But that's just me.

One interesting thing is that the "125 bytes per sector" isn't REALLY a hard-and-fast rule: one of the three "control bytes" in sectors 4-359 and 369-719 tells HOW MANY bytes of the sector are to be considered "file data;" if that byte has the value N, the first N bytes of the sector are data, the last three bytes are the control bytes as usual, and the rest of the sector are "unused" by DOS. You could use this to "hide" data on an ordinary DOS disk, or to create your own fully-AtariDOS-compatible DOS using more than three control bytes at the end of the sector, or... you name it.

>Also, what the article fails to mention is tracks. How many sectors per
>track? Or does the disk controller work this out manually?

Generally the disk controller does this "internally" to the drive; however, drive enhancements such as the Archiver and Super Archiver provide track-based access to the media and thereby allow the user to alter the number of sectors per track, sector numbering WITHIN the track (including missing and duplicate sectors), and a few other tricks that can't be pulled with a stock drive...

>I intend to make a programme which will read Atari 92k disks in a low
>density 5.25" PC disk drive - which should be _fun_ :)

That would be handy. Programs to read Atari DOUBLE DENSITY disks in a low-density 5.25" PC disk drive have been available for years, as perhaps you already know (check the UMich archive for "ATARIO" and/or "UTIL," which read and/or write AtariDOS, and possibly "SPARTAREAD" which reads SpartaDOS). It would be NICE to be able to read Atari SINGLE density on the PC too, but I half-recall reading that there's an essential limitation in the PC disk drive hardware that makes it PHYSICALLY impossible. I definitely recall that there was more to it than just writing the right software. If I were you, I'd investigate this issue thoroughly before spending a lot of time writing software that may be foredoomed to failure... This might be a good

time for our sometime hardware gurus to jump in with detailed knowledge of the technology: Richard Dell (or is it Bell?), where are you when we need you? :-)

As someone else pointed out, too, it is getting almighty difficult to FIND low-density 5.25" PC disk drives, but _I_ still have one so "go for it!"

>Thanks all.

You're welcome!

I have seen some nicely laid out ftp sites where every sub directory
had an index file, with descriptions of each file appended to the
directory information, and in the root of the specific tree would be a
master index file with all the subdirectory information in one file ..
down load that file and you have descritions and size/date information
for the whole tree.

>>drive hardware that makes it PHYSICALLY impossible. I definitely recall

Argh .. reposting, and deleting all the half remembered fog ... which
is only really pertinent to MFM (aka double density) reading and
writing, which is the ONLY type of recording possible on a modern PC.

Seems MFM has been around so long even dinosaurs like me sometimes
forget about FM recording.

History Chart:

Name letters words used in

single FM frequency modulation 128K 8 inch single sided
density 80-96K 5 inch single sided
some double sided versions
of each

double MFM modified frequency about everything else
density modulation

??? GCR group coded recording Apple, Commodore (??)

In addition to the modulation schemes, you also have to know the data
clock rates and track spacing and number for whatever format you might
be trying to read, as well as relative rotation rates of drives (I
have seen 5 inch drives that rotate at both 300 and 360 rpm,
switchable, as well as 600 rpm drives).

... interchanging both ways between an 80 track
drive (such as used on 1.2 meg floppy drives) and a 40 track drive
takes careful thought about track widths and such, and is the biggest
reason for needing to bulk erase floppies sometimes. At least 3.5
inch are all 80 track (though I am sure someplace some manufacutors or
other tried more), with just a different data clock rate between 720K

and 1.44 meg.

Now, having said it is basically not possible with a PC controller ... in the early days there were several controllers made for the purpose of putting 8 inch drives on PCs .. sometimes you can pick these up for about free at surplus places. I have one or two I picked up at Trenton, as well as a controller I actually bought when I put together my first PC, which could read FM disks. The later is the only one I ever used, and it had supporting software which was/is rather flexible, but it has hardware troubles (a drive select problem) so I have not used it in quite sometime.

These days (other than for gluttons for punishment like myself) I would recommend the SIO type cable and software approach, using a real Atari disk drive. Very time and cost effective.

Message-ID: <4shcg6$fbe@news-e2b.gnn.com>
Source record: 82030

Only the registered version of XFormer (3.5) will access the XFormer cable.
According to the instructions, you type this:
xformer -x:nnn d1:

Where nnn is a calibration value depending on your PC cpu speed. For a
486/33 the suggested calibration value is 125. If this does not work you
are suggested to try slight changes up or down until you reach a working
valeu. The correct number will be displayed at the top of your screen. Then
use this each time you boot up the cable.

I do not have the cable, just the XFormer.

My advice is to get an APE cable and copy stuff PC<->Atari that way.

Good luck!

Years ago this was possible using the earliest MSDOS machines with the
original 5.25" floppy drives. I think they were only 180K drives.
But later MSDOS computers had larger capacity drives and they were
not compatible. Not many people did this. I think there was a piece
of software that was needed also.

Use Win95's built in screen capture facility.
Just press alt+PrintScrn when running the emulator from a DOS window
and the image of the emulated Atari is copied onto the Windows Clipboard.
You can the use any bitmap editing program that has a Paste option to paste
the clipboard into your bitmap.

Hope this helps.

^^^^
>you? :-)

Gee .. is this a cue? <grin>

I remember we hashed thru this a year ago ... what it seems like we arrived at is that some, or most, of the IBM style floppy disk controllers choke on 128 byte sectors .. that being an unimplemented sector size. This would be more of a problem for writting than for reading, but I have never played with low level chip driving software for these chips, so have not experimented. I seem to recall that it depends on the brand of the floppy controller chip, the original IBM PC having used an NEC uPD765, which is an clone of an Intel chip whose number escapes me (and I can't find a reference book here .. something like 8271??). Seems like the original versions would error on reading a short sector, but some later compatible chips may work ok, just reading more bytes from the end (thru and past the CRC).

There is a read track function, so it should be possible to read the whole raw track and parse it out in software for a read only function (actually, I suppose one could also write that way). There are differences in the specific fill bytes chosen and such between different floppy disk controller chips as well, the Atari disk drives having used Motorola family controllers, and I recall a few incompatible formats related to the fill bytes when moving from the single density controller to the double density one. And of course, recall that the Atari controllers write inverted data due to choice of bus buffer/controller type and not inverting in software.

I may (should) soon have a PC of my own again to play with, and may look into the issue as a good low level programming exercise.

Jeff Armstrong writes:

> Okay. I've received many answers to this question before, but I've
>never got this to work. Is there ANY way to write an Atari disk using an
>IBM PC.

Yes, though you're right, the program(s) to do it is/are somewhat tem-
peramental. I suspect that it's a matter of operating the PC disk drive
in a manner literally "at the edge" of its performance characteristics;
it's somewhat miraculous that it can be done at all.

>I have Atari DOS II running on my 65XE with an XF551 disk drive.
>What program can i run on the IBM to write this type of Atari disk? I
>need an exact answer. I've tried to use UTIL and MyUTIL to do it, but
>neither works and neither comes with any true documentation to tell me if
>I'm doing something wrong. Could someone please help! I would love to
>use this 65XE!

First, I'd bulk-erase the destination diskettes. I don't mean just
FORMAT them, I mean go to a local radio or TV station and run them over a
commercial bulk tape erasure unit. Make friends with an engineer if you
aren't already, that's my recommendation. :-)

Then, format the destination diskettes in DOUBLE DENSITY, ATARI DOS 2.0
format (in the Atari drive, NOT the PC drive); I use a US-Doubler-equipped
Atari 1050 drive; I don't know whether the XF551 will work. I seem to recall
that the XF551 did some small things slightly differently than "most" Atari
drives, but don't quote me on that. Oh, and you'll want "single-sided" mode
if that's not the default on the double-sided-capable XF551.

You should then be able to put the formatted diskette into a "low-density"
(360K) 5.25" drive on a PC -- note that 720K and 1.4M PC drives WILL NOT do
the job -- and should be able to read/write individual files from the PC
from/to the Atari diskette using UTIL. As I recall, you invoke UTIL with
syntax something like this:

UTIL [/A] [/B] [/W] [/R] source destination

It may be that the switches must FOLLOW the source and destination parameters;
it's been a LONNNNG time since I used this and my memory is kind of vague.

Anyway-- /A means you're moving an ASCII (text; do end-of-line translation)
file. /B means you're moving a binary (non-text; do NO translation) file.
/W means you're WRITING to the Atari diskette, and that "source" is the name
of a PC file to READ, and "destination" the name of an Atari file to WRITE.
/R means you're READING from the Atari diskette, and that "source" is the
name of an Atari file to READ, and "destination" the name of a PC file to

WRITE.

I have some behavioral notes about UTIL -- i.e., things it does poorly, what makes it work better/best, general caveats and quirkiness -- "somewhere," but God only knows WHERE; it'd be a year to find them. However, I DO recall that you MUST give the command-line switches in UPPERCASE, i.e. "/W" will work but "/w" will NOT. There may be other weirdnesses, and as I said above, it's amazing it works at all -- and it's easy to make it NOT work.

>Reply here or E-mail me

I'm replying here; it's difficult-to-impossible to also e-mail. Hope you got to see this.

Good luck to you.

Chris Chiesa

David
(and anyone else needing a PS for an Atari 800, 810 or 1050)

All you need is a 9VAC power source. You can get a 2 or 3 amp
18Vct (18vac center tapped) Transformer at Radio shack for a couple
bucks, pick up the appropriate connector and some wire, along with an
AC cord and you are in business. All you do is connect the AC cord
to the input (primary) side (usually 2 black wires), and the Secondary
side to your cord/Atari plug. If you want, you can stick it in a box
to make it look nice ... I just tape up the terminals to prevent shock
hazzard, and let it go like that ... I've had a few of these "supplies"
working on various Atari items for over 10years ...

Bill

You know, I could use this also.

It was called Dorsett, I believe. I have a few tapes, but neither a
cartridge, nor a cassette drive......

We picked them all up around 1988, back when all my stuff still worked
and before we lost all the cartridges.

I heard that BBS Express, the original one that everyone and his mother
used to run in the 1980's, is shareware now. If so, could someone mail
it to me or point out from whence it can be taken?

I recently sent an SX212 modem to someone, and I've since lost his
address. I just ran across the docs (what there are of 'em) for the
modem and would like to send them along as well. Anyone get a modem
from me recently?

Hmmm... I *do* see it from two totally different accounts
(one on Primenet, the other PSI). My only guess here is that
some servers don't automatically start carrying new groups created
in the alt.* hierarchy.

The group *was* created by going through all the "official"
channels and such, so it really should be out there.

Any new alt.* group created for Ataris may have the same
distribution problems as a.b.c.a8, so, if nothing else I suggest
we at least find out why this one hasn't propagated all the
way through yet.

BTW, the latest follow-up from Terry Ortman, for those who are interested in the works of the mindless. :-)

Looks like NOW I'm allegedly stalking, spamming, and harassing this guy. Please note that the ONLY reason for all of this was because I didn't want to buy his hardware.

Kids! Go figure! :-) My ISP and I are getting a great laugh out of this. I think sometime in a week or two, when this has blown over, I'll hook up to the ISDN line at work and send a few thousand messages into his mailbox. Hmmm...Anyone know a fast way to do that? Maybe a (Macintosh) program that I can give an email address and newsgroup name to and it'll just pipe messages along? Certainly would be a lot faster than setting up a macro. :-)

Glad you said that, your THREAT has been forwarded to your PostMaster, you are the one beyond hope, and your PostMaster will obviously FILTER your name out so you can no longer harass me via email.....

You started the CRAP!! It's just getting deeper, and I am suing Mike Shannon of STARVECTOR SOftwrae for his continued postings which are not only OBSCENE, but as a competitor he has NO KNOWLEDGE or BASIS IN FACT in the LIES he is paoting, but then he heard it from the same liars you DID!!!

They are being reported for WIRE FRAUD, $250,000.00 fine for the first offense and $5,000.00 each additional offense, so remember this, you will be visited by your local police for harassing me and your Postmaster should pull your access for threaetening to VIOALTE FEDERAL LAW and send harassing (SPAM) or otherwise MAIL!!!!!

I refuse to DEAL with CRIMINALS such as yourself, you were told to not reply and you continue to do so, because you are obviously a CHILD who is playing the game, I'm gonna get in the lawt word...

THE LAST WORD WAS BY ME, the ONLY REQUIREMENT, once given, anything else is ELECTRONIC STALKING....

DO NOT REPLY TO ME EVER AGAIN!!!!!!!!!!

If you continue to stalk me, you will be prosecuted!!

Not at all, Daniel. I bought his email to public light so that the
population could bear first-hand witness to the mentality of this cretin.
I, too, found his last email (and the one which followed it) very
humorous. Twelve-million-plus years of evolution somehow completely
avoided this guy, y'know? An intelligent, sane, rational, non-ripping-off
type of person would have handled the "transaction" as follows:

ME: I'm interested. Here's an offer.
HIM: Here's a counter-offer.
ME: Here's a final offer, split 50/50 between our offers.
HIM: <<no reply for a week>>
HIM: Hey, what happened? Here's a counter-offer.
ME: Dunno. I'm not interested any more, though. Thanks anyway.
HIM: Oh, okay. No problem. If you change your mind, let me know.
ME: Will do.

See? That's a sane, rational, intelligent (and abbreviated) conversation.
Completely unlike, for example, your message calling me an "ass" and
alleging that I took "[my] idiot email flame war to his service
provider." I did no such thing. So far as I'm concerned, there wasn't
anything even vaguely resembling an "email flame war". All I saw was one
fellow getting WAY out of line and refusing my requests to be left alone.
He failed to comply; therefore, I notified his ISP of his harassing
actions. No big deal; that's how the internet works. I now have a filter
on my mailer which will reflect any message he sends to me back at him.
One day I'll probably fire up the ISDN line at work and forward a few
thousand messages to his mailbox just to see how he'll react, but that's
about all. :-)

Using a "shareware" program called LVIEWPRO (32bit), you can get a
"capture" of your screen, and save it as a gif, jpg, or any other format.
The LVIEWPRO program is widely available and has many nice features.
(the 32bit version works great on Win95 .. unlike PC Xformer!)

545. Brian's "Best Offer" Game Sale!

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-17 00:00:00 UTC
From: Brian Wiklem <brian_wiklem@interactive.sony.com>
Message-ID: <4shvlv$a85@usenet1.sjc.in.sel.sony.com>
Source record: 81969

As the title suggests, no auction (I guess this is a sorta 'pseudo'
auction), just items sold to the best offer that arrives.

This will run until this Sunday, July 21st.

I will review all offers, however if an offer comes in that in my
book is too good to pass up, that item will be sold. Hence, "Best
Offer" sale.

So, submit your best offer (pretend this is a silent auction, as I
will not be posting current bids).

I have set up some minimums I would like to adhere to, however
feel free to bid anything you like. You are also free to come
up with 'package deals' and I may or may not accept.
Minimum in my mind is in ($$) listed below....

And remember, item here today may not be tomorrow because of a good
bid.

Just keep in mind, make me an offer I can't refuse.....

Trades may be considered, see my incomplete want list below.....

Enough BS, here's the stuff:

Atari 8-bit items

XM301 Modem, complete in box, all docs, software, etc. (1.00)

Wico Trackball, untested, no box or docs, (2.00)

Return of the Jedi, cartridge, complete in box (2.00)

Atlantis cartridge, complete in box (2.00)

Atari Light Pen, complete in box, Atari Artist cartridge (2.00)

Centipede, cartridge, complete in box (2.00)

Robotron:2084, cartridge, complete in box (2.00)

Mario Bros. (XE version), cartridge, complete in box (2.00)

GATO, cartridge, complete in box (2.00)

Airball, cartridge, complete in box (2.00)

Crime Buster, cartridge (light gun game), complete in box (2.00)

Choplifter (XE version), cartridge, complete in box (2.00)

Battlezone, cartridge, complete in box, (2.00)

Desert Falcon (2 available), cartridge, complete in box (2.00)

Qix, cartridge only (1.00)

Food Fight, cartridge only (might have docs) (2.00)

Super Pac-Man prototype cartridge (5.00)

Superman III prototype cartridge (5.00)

XE Demo cart, 4 games on it incl. Joust, Ms. Pac-Man (5.00)

Atari 5200 Stuff

5200 Trackball, casing, ball, electronics, no encoder wheels or
ball bearings (1.00) good for parts.

5200 set of boxes (sold as set only)

Robotron 2084, Pac-Man, Centipede, Choplifter, Countermeasure, Qix,
Berzerk, Kangaroo, Missile Command, Star Raiders, Super Breakout,
Joust, Jungle Hunt, Pole Position, Football

(3.00) set

Nintendo Stuff

Dragons Lair, cartridge only, works, (1.00)

Track & Field II, famicom cart, complete in box (1.00)

Skyblazer (SNES), brand new in box (5.00)

Cliffhanger Gameboy, brand new (1.00)

AMIGA Games

Arkanoid, Golden Axe, and Operation Wolf, complete in box (4.00) set
---

Atari Jaguar

Atari GREY Jaguar controller, pastel blue buttons, brand new
in box, as seen in last issue of Ultimate Gamer (15.00)

Magazines

BLip Magazines, April, May, June, July, August of '83 (1.00) each

Electronic Games, August 1983 (2.00)
Electronic Fun, February and July of 1983 (2.00) each

Atari 7800 Games, all brand new in the box, still shrinkwrapped

Dig Dug x8 (8 copies available)
Asteroids x3
Donkey Kong x2
Donkey Kong Jr. x2
Centipede x2
Joust x2
Ballblazer x2
Ms. Pac-Man x2
Xevious x2
Galaga x2
Winter Games x2
Cracked x2

all (2.00) each cartridge

Atari 2600 Carts, new in shrinkwrapped box

Phoenix, Space Invaders, Gravitar (last two in Red Box) all x2

(1.50) each cartridge

SEGA CD (all brand new still shrinkwrapped)

ESPN Baseball, ESPN Football, ESPN Hockey, Dracula x2, Cliffhanger,
Ground Zero Texas, Mickey Mania, Wheel of Fortune, Dracula/Frankenstein,
Prime/Microcosm, 3Ninjas/Hook, Sewer Shark. (2.00) each CD

Coin Op Marquees

Asteroids (5.00) surcharge for shipping (not light)
Asteroids Deluxe (5.00) surcharge for shipping (not light)
Battlezone (5.00) surcharge as well
Cloak & Dagger (5.00) mylar/vinyl marquee, rolls right up

Small collection of trade show (CES) LAPEL pins, various makes
container contains at least 30 pins (too lazy to count) here is
a brief listing to give you a taste:

Food Fight, Atari Olympic pin, Sony Polygon man, Sega Sonic Pins,
Lemmings complete character set, Sega Genesis V.R. Helmet, S.F. II,
and a load of others.....

sold as a set, no cherry picking, don't feel like sorting through
them......(20.00)

Other stuff.......

Texas Chainsaw Massacre 2600 cartridge and docs......(10.00)
Halloween docs (2.00)
Street Fighter II Champion Edition poster Full Size
(artwork is of Japanese PC-Engine version style) (5.00)
Pac-Man Glasses (set of two) (5.00)
2600Jr. Brand new in box (5.00)
Streetfighter II coin op action bank (sounds, etc.) (5.00)
Atari Binders (sick of seeing these already?) (.95)
Intellivision II, new in box (opened, not hooked up)
with Burgertime cartridge, new in box (15.00)

Shipping will vary, but most items (carts and small items) will be
done Priority Mail ($3.00), however big/awkward/heavy/multiple items
will cost more to ship. Buy a lot and I'll eat the cost of shipping.

Make best offers, package deals to:

brian_wiklem@interactive.sony.com

No reasonable offer refused.

If I don't respond to your offer, the item was either sold, or I
didn't accept your offer. However, I'll sincerely try to reply
to all e-mails sent. But I won't engage in a ten week bidding war,
so make your best offer, don't worry about what someone else has
bid. Again, this isn't the typical Net auction.

Cash (not recommended), checks (need to clear) and money orders
will be accpeted (M.O. get priority as does cash).

NO C.O.D.'s

Here is what I'm looking for:

NES: Burgertime, Bump n' Jump, Rampage, Arkanoid w/controller
2600: Track & Field w/box and docs (don't need controller)
5200/7800: nothing
XL/XE: nothing
Amiga: Pac-Mania
Jaguar: nothing

Thanks for Reading.............

First off, which version of PC Xformer are you using. It must be
3.50 or later. Curiously, I was about to build this cable from the
wiring instructions provided by BraSoft. It shows the following cable
connections:
SIO end PC end (DB25)
2 3
5 5
7 7
10 9
3 11
4 18
4.7K ohm resistor connecting pins 2 and 11

The odd part of this is that RS232C does NOT use pins 9,11 and 18 They
are either reserved or not used. What is he doing here? I don't have a
db25 serial port on my PC, so I wanted to convert this to db9. Can't be
done since these pins don't match anything on the db9 configuration. I
wish Darek had listed the pin ID names so the instructions would make

sense. Anyone with a working PC Xformer cable, please identify the correct wiring and post you results.

Thanks for your comments, James. I don't know anything about Delphi's history, but my feeling is that, if it says Atari on the logo, the user is (or should be) my friend. We have enough enemies, we don't need to make more within our own ranks. Thus, if someone objects to the placing of 8-bit software in a.b.a, I suggest they form their own binaries group (they could call it alt.binaries.atari.68k-bigots I guess).

What's really strange is that, although I am told others can see the two new groups I created (or tried to), and apparently can see a.b.c.a.8, my server (at my personal account) shows none of the three - but it does show a number of "warez" groups, even though the sysadmin has issued generic warnings that trading of warez will not be tolerated. I really don't understand the mentality that says "we'll make this available, but if you use it, we'll punish you." I don't /want/ to use it, but it seems to me that if the use is to be monitored, it would be much less work to simply rmgroup anything with "warez" in the groupname.

I'm very sorry if this is not the appropriate newsgroup for this...

ATTENTION! LOTS O' FREE 8-BIT STUFF!

I'm leaving the country in a matter of days, and would like

to ship all of this stuff to the first serious 8-bit enthusiast

who gets back to me... the shipping is on you, of course.

(it's heavy, so it won't be dirt cheap, but still....)

Mail me ASAP at lesneskp@gaia.ecs.csus.edu

HARDWARE:

Atari 130XE computer with dust cover

Atari 1200XL computer with dust cover

(2) Atari 1050 disk drives (5 1/4") with dust covers

Percom Dual RFD Disk Drive set (double density drives -

176K on one side of a

5 1/4" disk)

Avatex 1200hc Hayes-compatible 1200 baud modem

ICD P:R: Connection (serial port interface for Atari -

has 2 serial ports, 1 RS232

port - use for modem, etc.)

U Print (parallel printer interface for Atari with 16K

buffer)

RCA 13" Televsion (use as monitor!)(works fine as a TV

except it needs new volume control)

Power supplies for all of above, etc.

SOFTWARE:

TONS of disks with lots of stuff; mostly games (fun

ones!) however, but there's ICD's SpartaDOS and

Atari's DOS v2.0, v2.5 and v3.0, a C compiler (!),

AtariWriter Plus (word processor with spell check),

Text Wizard (another word processor), Broderbund's The

PRINT SHOP, Atari Assembler Editor, Atari Macro

Assembler and Program-Text Editor, PASCAL compiler

BOOKS:

The Atari BASIC Source Book (includes the interpreter's

actual source code)

Mapping the Atari (good Atari memory guide)

Compute's First Book of ATARI GRAPHICS

Inside Atari Basic

Note: Shipping Costs from Canada are higher than what U.S. based people
are used to paying. SURFACE rates to the U.S.A. are (Canadian)
$2.30 for up to 250 Grams, $3.55 for up to 500 Grams, and
$6.20 for up to 1 KG (2.2 lbs). AIR rates are $3.60, $4.85 and
$8.55 repectively. Above 1 Kg, parcel rates apply.

Shipping is NOT included unless specified.

When Shipping IS INCLUDED it refers to North America. Outside
of North America extra shipping costs must be paid for by the
purchaser.

Items will not be shipped until an INTERNATIONAL Postal Money Order
in US funds is received. Note "International" Money Order ONLY.
Domestic (US) Postal Money Orders state (Negotiable ONLY in the USA),
so please do not send one of these to Canada (I have had two sent
to me already despite me asking for INTERNATIONAL so please do not
think I am over emphasizing a point.

All items are in working condition unless noted otherwise. "Untested"
items are just that. I have no reason to believe they do not work,
however, there is no guarantee. If I take the time to test them, I
will expect a little more for that item.

I reserve the right to withdraw any item for sale at any time.

Well, I don't know about the 8-bit version, but you can find the ST
version at any of the following FTP sites...

1) toad.net
2) ftp.cnam.fr
3) ftp.uni-kl.de

Its what I use to run The DarkForce! BBS at 1-606-886-9014...I think its
great, and Rich Sanchez gives great support. Later 'n luck! :)

554. All these new groups! :)

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-17 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4shmm7$sjm@madeline.INS.CWRU.Edu>
Source record: 81978

Seems to be alot of arguing about creating a new binaries group,
what it should be called, and what it should do.

There is also the problem that most providers will not carry
new alt.binaries groups, and there will certainly be an avalanche
of rmgroups for groups with 'warez' in the title.

I suggest someone write an RFC for comp.sys.atari.binaries.misc to
supersede the old comp binaries group, charter it as un-moderated,
and then call a vote.

Such a group would be carried by nearly all providers if its done
properly.

If anyone is willing to draw up the RFC I will be happy to
handle all the votes.

>Thanks!
>
>
>Damian Gick
>dgick@sun1.iusb.edu
>
True, the 850 pinouts aren't exactly the same as that of a PC, but
this works great. I do it all the time. Here are the pinouts for R1: of
the 850:
850 pin number(db9) PC pin num (db9) RS232C (db25) Name
1 4 20 DSR
2 1 8 DCD
3 3 2 TXD
4 2 3 RCV
5 5 7 SG
6 6 6 DSR
7 7 4 RTS
8 8 5 CTS
9 (LOGIC PULL-UP) 9 22 RI

The Atari 850 uses a db9F on it (db9m on the cable side) the PC uses a
db9m/db25m on the port (db9f/db25f cable side). Use all of the above
connections but switch on one end RCV and TXD to make a null modem
cable. This is correct for regular PC-PC null modem cables as well as
Atari-PC null modem cables. Good Luck.

This should be in the FAQ!!!

Try the following:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/
This is the oficial Atari archive, currently under new management and
looging better than ever. Bill Kendrick is now the archive keeper and
he's doing a great job. It looks great! You can easily fins and
download files quickly now. Only thing it needs (probably soon to come
or maybe I just missed it) is a master index of all files (like the old
index0). You don't really need it, but it would still be nice. The
layout is very logical and easy to parse. Of course there are many
excellent web pages to locate files. Ads are posted regularly here!

I don't know anything about THAT; I'm not using Netscape at all, much less any "default" provider of anything. Straight ASCII serial-line here, at least until the golden age of plain-text disappears for good one of these days :-(...

>[...]I have a messagebot to
>post the charter every 2 weeks, even if nothing else ever gets posted.

Heh. Unless you post the charter in binary, the charter post will, itself, fail to abide by the "binaries only" provision of the charter. :-)

>The problem began in the Sixties, when it first became necessary for both
>parents to work outside the home in order to support the accepted lifestyle
>of the entire family. In the scramble, someone forgot the teach the kids

Guy, I am including the balance of the comp.sys.atari.* groups in this discussion along with alt.config; it may be appropriate at this time to include news.groups as well, but I will wait for comments before doing so.

Guy Harrison wrote:
>
(I include here quotes from a couple of previous posters in the same thread - to save time, I'll reply directly to these as well.)

> >> this group are primarily interested in a place to illegally
> >> repost copyrighted software.

This comment (whose poster may remane nameless unless he wishes to step forward at this time) is frankly slanderous. As the proposer of the new groups, /and/ an established software author, I take personal umbrage at the expressed implication that I am a pirate. I suggest you ask the former BBS sysop and the author of RatSoft BBS how I feel about pirates - of course, he may not be aware of just who blew the whistle on his pirate activities.

> >> Annius V. Groenink <avg@cwi.nl> posted messages to the group asking
> >> whether anyone still found it useful and the vast majority agreed
> >> that the sensible thing was to remove the group. At the request of
> >> the moderator and the readership, it is now removed.

This is patently untrue. Annius posted one or two messages in comp.sys.atari.st remarking that he was planning to have the group rmgrouped, but the "vast majority" most of the readers most certainly did NOT agree to remove the group. I think most of us simply found it impossible to get anything past the moderator. Personally, I voted to retain the group.

An now, back to Guy's remarks:

> I attempted to post to this group on more than one occasion - at
> no time did I see any information on how to do so, and received no

>
> Guy Harrison
>
> guy@swampdog.demon.co.uk

It certainly appeared to me that the rmgroup was "railroaded" though.
No voting results were cross-posted to the comp.sys.atari.* groups. By
that time, however, the rmgroup was a /fait accompli/, as they say, so
there was little anyone could do about it.

: new alt.binaries groups, and there will certainly be an avalanche
: of rmgroups for groups with 'warez' in the title.

Most providers aren't very happy when they have to carry alt.binaries.*
groups, mainly because of the extra space requirments.

: I suggest someone write an RFC for comp.sys.atari.binaries.misc to
: supersede the old comp binaries group, charter it as un-moderated,
: and then call a vote.

Tale (The moderator of news.announce.newgroups) wouldn't like the name.
The RFD (Not RFC (those are something else entirely), but RFD) would
probably be for comp.binaries.atari.

: If anyone is willing to draw up the RFC I will be happy to
: handle all the votes.

The UVV (Usenet Volunteer Votetakers) handle all votes now. I'd be
willing to write up an RFD, but I'd like to know if there's any support
first and what conditions, i.e., moderated or not? And if so, who will
be the moderator? (Robomoderation is an option, too, but we'd still need
someone to run it)

Steve, I have such an RFC prepared. I'll be happy to email it to you
for comments before submission, but I have been told that the odds of
success are practically nil.

564. New Atari Newsletter!

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-17 00:00:00 UTC
From: <>
Message-ID: <419_9607180213@pandabbs.com>
Source record: 82063

```
ATARI 8-BIT NEWS

A newsletter dedicated to the Atari 8-bit world!

This newsletter will be hopefully contain 4 pages of information at
the least. It will be published quarterly.

Some features will include:

* Hardware reviews
* Vendor Listings
* User Questions & Tips

If anyone has any ideas for the 1st issue send them to

atari.8bit.news@juno.com
or reply here or through fido net-mail.

4 issues will be sent out with 1 or 2 "Specials" if time permits
The Special issues are through subscriptions only

A single issue will be $1 US - $2 elsewhere.
A year subscription will be $3.25 US - $5 elsewhere.

I hope to give the 8-bit community a cheap newsletter. For all I know
this might become bimonthly if the response is great. And if you contribute
you get a *FREE* issue!

Happy 8-bitting,
Chris Friend

P.S. - I need some more stuff....Microsoft Publisher can fit quite a bit
in 4 pages.

565. Alternate Proposal: comp.binaries.atari.8bit

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-17 00:00:00 UTC
From: mjewison@irus.rri.uwo.ca
Message-ID: <4sit9e$2dd@falcon.ccs.uwo.ca>
Source record: 82064
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.advocacy,comp.sys.atari.8bit

```
--------
My apologies if this appears twice. My news reader barfed on my first
attempt to post.
--------

One of the problems with setting up an alt.binaries group is that,
as has been pointed out earlier, many sites don't get parts of (or in
a worst case scenario) the entire alt hierarchy. The university here
just lopped off the entire alt.binaries tree several months ago because
the spool time on the server was less than six hours and the system was
thrashing itself to death.

I would propose that we try to make any group we want to see created an
"official" group in the comp.binaries hierarchy. For those of you
uninformed on what that means, here is a brief summary:

1) An RFD (Request for Discussion) goes out where the merits of creating
the newsgroup are discussed.

2) A CFV (Call For Votes) goes out where the proposed newsgroup is voted on.
In order for a group to pass, the number of YES votes must be 2/3 of the
total number cast, plus the number of YES votes must be at least 100 more
than the number of NO votes cast.

In theory, I support the creation of a binaries group - but I would rather
not see it in the alt tree. Alas, I'm not sure we would have enough people
voting in favour of the proposal to meet the second criteria for passage.

Any thoughts?

- Mike Jewison

Cross-posted to: alt.config,news.groups,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.advocacy,comp.sys.atari.8bit

(Oscar Fowler mentions the already existing alt.binaries.comp.
atari8bit he started.)
I've been wondering about this. Rich Mier said correctly that
all that's in a.b.c.a. is some spam. And Rich Tietjens believes
he should be able to see it. I don't think many people can see it.
I also don't think many people can see the new a.b.a and a.b.a.d.
Somebody said these groups have to be added to the usenet groups
specifically by sysadmins, or systems are set up not to have
alt or binaries groups added. I can see the new Tietjens
groups and the old a.b.c.a. Something that has not come up
in this thread is the A8 vs ST thingy. STers generally don't
like to mess with A8 stuff, I think. STers sorta kicked the
8-bitters out of Delphi (rumor). Anyways, personally, I like
/prefer the alt.binaries.comp.atari8bit idea and keep it
separate from what I would like to see... ->
alt.binaries.comp.atariST. BUT, I do appreciate the efforts
of both Mr. Tietjens and Mr. Fowler and whatever you guys
wanna do is fine with me.

-
First, insert it into the RIGHT cart slot on your 800, along with
Atari Basic on the LEFT slot.
What? You don't have an atari 800? Oh well.
At any rate, it has online help (I seem to recall).
Type help or some such like that, hold on let me get my antic mag out.
According to the AD, it will also work in 800xl or any XL with built
in basic. Still don't know how to use it though.

Derrik's cable goes from the sio port on the atari disk drive to your
parallel port not a serial port. The parallel port is TTL just like
the atari sio. On the other hand the PC serial port is rs232 and to
connect it with the atari you need to convert between rs232 and TTL
which is what a sio2pc cable does using the max232 chip or its harris
equivalent.

570. ATARI EQUIPMENT MUST SELL IMMEDIATELY!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-18 00:00:00 UTC
From: terry.ortman@fantasy.com
Message-ID: <19960718002607.aaaa006rf@babyblue.cs.yale.edu>
Source record: 81981

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

Subj: video fix

I just got a monitor the other day and im using the thing now.
does anyone know about that one computer hack to impove the video output.
I've seen it years ago but all I remember now is that it had to do with a
resistor. after having to do a little work on my computer to hook up the
monitor, I may have already fixed the video by putting a resistor between the
ground and the video port(I put a couple RCA jacks there instead some time ago
but thats another story). I noticed the colors bleed less with resistance
across it and I asuumed that might have been the fix too.

574. Strange cart found

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-18 00:00:00 UTC
From: bwillard@mindspring.com
Message-ID: <bwillard.327.001BB191@mindspring.com>
Source record: 81985

I pickup up a 130XE today that had the strangest assemblage attached to it I've ever seen on an Atari. A cartridge was plugged in. From the cartridge is a module with single switch. From joystick port one is a module with a slider switch, a toggle switch, a pushbutton switch and a rocker switch. In the second joystick port is what looks to be a key plug. From the monitor port is a cable with BNC connector.

The name on the cart is COMPU-PROMPT (first in computerized prompting).

There is a label on the computer from Southern Bell.

Has anyone any knowledge of what this Rube Goldberg device is? Or how to actually make it do something?

Bruce Willard bwillard@mindspring.com

575. Commodore 1902A monitor question

Newsgroup: comp.sys.atari.8bit

From: bwillard@mindspring.com
Message-ID: <bwillard.328.0059CF2E@mindspring.com>
Source record: 81986

I just picked up a great Commodore 1902A monitor. It works great with my SNES using video and audio, but after searching the web and finding pinouts for the 130XE and the 1902A and making a cable, I get nothing. The pinout I found for the 1902A did not show a video connection, just ground, chroma, luminance and sound. Does anyone have a tried and true pinout for a cable to go between them?

Bruce Willard bwillard@mindspring.com

Thanx! That makes sense now. It didn't say that in the instructions
for making the blasted thing. Of course, I haven't bought my copy of
PCXf 3.5 yet. Gotta save up a couple more bux. I guess the instructions
will be with the emulator. All that was given in the ad were the pin
outs and the resistor connections.
Thanx again!!!

Source record: 81988

I have a complete Atari 65XE in fine working condition. I'd like to trade it for a working Indus GT disk drive or Atari 1050 disk drive, complete and in good condition, but most importantly working.

I can also throw in an Atari 1010 cassette drive in exchange for a Happy 1050 or an Indus GT or a pile of someone's old software, if that's worth anything to anyone :)

Please e-mail me to work out a swap.

Technically correct, I suppose, but experience shows that people don't
look at .d groups before subscribing to binary groups. Posting the
charter will be the lesser of several evils, I think.

> I'm not looking forward to being a senior citizen when the current

I can handle moderation - either manually or automatically. That's the
easy part. Getting the RFD accepted and passing the CFV is tough.

Just wondering...couldn't the Pokey chip be emulated as well? Thought
not, too bad because sound is the major reason to play complete games on
the emulator. Heck, guess I'll still keep my 130XE :)

Even better than that, there are several programs that can write a program in
the bootsector (or whatever it's called) that instantly gives you a menu of DOS
files when you boot up with names that you can edit yourself (It only lists
protected files or files ending with .COM depending on the program you use).
The bootmenu is in an area of the disk that is invisible to DOS, so it takes
up little or no room from the files. Some of these programs even switch
Happy drives into Warp Speed mode as well. They're probarbly on some FTP
site, but I could upload some myself (providing my PC's diskdrive can withstand
whatever punishment MYUTIL give it).

Does anyone have a FRESH (i.e. NEVER used as a) character disk for
ultima III? I one on my copy (and unfortunately, the one in the
archive) lets you play for awhile, then you can just be wandering
around sosaria and it will act like it sucked you into the whirlpool
(even when you're not on a ship!) and yeah, and then it locks up.
Or if anyone has one that has a partial game on it, I guess I could
take that one too, as long as it works.
Anyone let me know or email it to scharles@superlink.net

Message-ID: <31EE2367.6656@xmission.com>
Source record: 81999

Just curious to know if there's a utility for APE like there is for SIO2pc (file2pc). Something that allows you to transfer a file from your atari's hard-disk to your PC's hard disk?

My PC sio2pc machine is connected via ethernet into a network - and this setup allows me to really do some file and printer sharing on the old Atari!

From: James King <jeking@xmission.com>
Message-ID: <31EE1EE3.671A@xmission.com>
Source record: 82000

For the last 3 weeks or so, I've had this problem with my modem or black box buffering my text ..

If I connect to any system faster than 2400, it stops displaying the last several lines of screen information. Then, when I go to enter a menu or whatever, it begins spitting out my logon password and ID or whatever information I may have typed in previously.

What is causing this buffering? I've swapped out my modem AND blackbox, yet the problem persists..

>
> Any thoughts?

I have a proposal all written up. It was already shot down in flames
after being submitted to the group mentors, but I am more than willing
to let someone else have the text to modify as they see fit.

Getting 100 votes is the toughest part - but I think it's likely to be a
lot easier now than it was before I brought the subject up in the entire
comp.sys.atari.* tree. I suggest a "straw" vote - who wants to be the
vote-taker? We will probably want to take a straw vote on each of the
following points:

Should comp.binaries.atari (all systems) be created?
Should comp.binaries.atari (all systems) be moderated?
Should comp.binaries.atari.8bit be created?
Should comp.binaries.atari.8bit be moderated?
Should comp.binaries.atari.st be created?
Should comp.binaries.atari.st be moderated?

I suggest that, if we can find a vote-taker, and if we can garner 100 or
more votes in favor of any of the above "straw" proposals, that we then
submit the formal RFD and try for the group. I'd also recommend a .d
group (discussion) be part of the proposal for each binary group
desired, so as to keep binaries and discussion seperated (in
consideration of those who'd like to discuss the matter but don't have
selective download ability).

From: scharles@superlink.net
Message-ID: <31ee79ce.1076347@news.superlink.net>
Source record: 82002

Here's an idea to run past all emulator users/programmers:
How about someone cobble together a PC board or serial port device
that would have a pokey chip on it, and just use that for the sound?
That seems to be the major stumbling block in the emulators, both xlit
and xformer and the upcoming rainbow. The sound could still be
produced in the pc end but if it detected the pokey board, it would
use that instead. Just a thought.

IIRC, Bruce, you should be able to plug the video into chrominance and
get a picture. If that fails, try connecting to both chroma and
luminance; both signals are present in a video signal.

Subj: video fix

I just got a monitor the other day and im using the thing now.
does anyone know about that one computer hack to impove the video output.
I've seen it years ago but all I remember now is that it had to do with a
resistor. after having to do a little work on my computer to hook up the
monitor, I may have already fixed the video by putting a resistor between the
ground and the video port(I put a couple RCA jacks there instead some time ago
but thats another story). I noticed the colors bleed less with resistance
across it and I asuumed that might have been the fix too.

What a jack ass. I don't think Terry Ortman has even read this news group for a year, otherwise he'd have a clue that we think his sales pitches for a $100 Atari 400 were so screwy. I'll bet this guy isn't even 13 years old! Probably can't even have a stiffy yet, poor guy. Oh well, maybe he'll grow up some day. I feel sorry for the girls at his junior high school though.

From: ccoffin@slate.Mines.EDU
Message-ID: <4soal0$sf4@magma.Mines.EDU>
Source record: 81873

Hi all!

I recently got some old copies of games on cassette such as Datasoft's Pooyan and Zaxxon and Epyx's Temple of Apshai.

I have tried to load them onto my 800XL and XEGM with little success. I will get the introduction screen for the Datasoft games, but nothing happens after that.

Does anyone know if these games will run on computers newer than the original 400/800?

Thanks,

ccoffin@mines.edu

There exist old utilities that would convert boot tape programs to boot disks. You could then move the disk to an ATR file. Of course, if the game is a BASIC program, you could just load it into BASIC and then save it straight to an APE disk image. (I'm assuming you do have a 410 or 1010 program recorder or equivalent.)

Source record: 81877

Maybe some people have heard me, many moons ago, talk about
some of my programming efforts on/for A8.
I talked about my transfer program, which uses a my
modifications to Charles Marslet's 'Util' x088/x86 assembler
source code.
The idea was/is to make a pc utility which is sector based.
No directory structure or stuff like that, just read and
write sectors on both the A8 and pc side to transfer files
(no null modem, no sio2pc, no APE.)
I said once that one of my floppy disks on my pc got a
trashed FAT, due possibly to some problem with my pc
utility. I'm not sure about it, but no-one has expressed
any interest in my programs since.
SO, family is gone to Atlanta and Ocean City. And Yogi said
he wanted to write a boot disk on his pc to use on his A8.
That is one of the things my programs do.
I've been using my programs all along whenever I had a file
transfer to do. I haven't had any trashed FATs since that
one. Mind you, I guess you could write 'Star Raiders' to
the boot sectors of your hard drive if you were haphazard
enough. I think the program would do it.
Well, the reason for all this msg. is, Yogi's idea. I went
to work (ha) and reached some success with my 'write
SpartaDOS boot sectors and x32d.dos' for my pc utility.
I formatted and wrote SpartaDOS on a virgin disk, one never
touching a A8, AND IT WORKED! (applause, YEA!) Happiness is
something working.
While I'm at it, I'm going to post the menus of my programs,
just to let you all know what I have in mind.
What I have in mind is a pc utility that works. 'Util' has
the problem of no error checking, many errors often occur
when this type of thing is attempted. My programs do sector
writes, so are DOS independent and do CRC checks, so are
foolproof as far as you know if it transfered correctly
before you send it over the internet to 1,000,000 people and
it was corrupted.
Here's my PC UTIL menu:
A. Select drive
B. Verify Data disk reads OK
C. Read a file from Atari disk
D. Write a file to Atari disk
E. Exit program (MUST BE done or disk controller will have
wrong setup when you leave, if you're chicken, always
re-boot after using my program.)

F. Format data disk, Atari style
G. Select density (forget this, sngl. is FM and most pc controllers can't do it.)
H. Write SpartaDOS boot and x32d.dos
I. Write MyDOS boot, vtoc and DOS.SYS and DUP.SYS

Now for the A8 side:

Select drive
Read a file from PCUTIL disk
Write a file to PCUTIL disk
Verify sectors read ok
Sector copy entire disk
Partial sector copy of a disk
Atari sectors to a file
File to sectors on disk

Some notes: It is absolutely essential to use a clean disk. A fifteen year old A8 single density disk with games you no longer want will NOT do. Must be double density (on both machines of course). Maybe Richard Dell can tweak the controllers, but I think even he recanted and said modern pc controllers can't do FM sng. density. There ARE controllers that can do sng. density for pc, I think Rich Mier says he has one. But I don't have one.
Finally, use a 360k pc drive. Modern 1.2meg or 2.8meg just won't work. You're already asking a lot to get the pc drive to do this stuff, can't push your luck, it won't work.

Rainbow does support such images. Aquiring them seems to be the hard part. I too am seeking the BASIC XL rom images. Chris Lam, Rainbow's creator, gave me some tips on how I might use an assembly-language program from DOS to copy the stuff to disk one bank at a time, but for me it would be a last resort since I have not attempted 6502 assembly in over 10 years. It would be nice if there was someone here who had already succeeded in doing this...

> decipher what the abbreviations near the score are for,
> and also how to land the plane!

The four letters represent the damage you have received from enemy fire. B is for Bombs (you can actually still bomb, but but not effectively), F is for Fuel (most important item!), M is for movement (joystick response will be slower) and G is for guns. When all four are gone, and you get hit again, the plane is kaput and will crash.

To land the plane, when you hear the bell ring, push the fire button. You will see the "R" (runway) to "L." It takes some timing to get it right. Also, if you land just perfectly (begin the descent just about halfway before the airstrip building), no enemy bombers will come. Also, since timing is part of your ranking, if you decide something doesn't needs to get fixed, just push the button, and it proceeds to the next item. It's somewhat risky, but still playable.

Also, don't bomb your own airstrip...the results are not too pleasing. <g>

Hi,

When my XFD/ATR web site was first made available it
contained a program called ADIR for displaying a
directory of AtariDOS/MyDOS ATR/XFD files. The first
release of this also came with the source code.

I have managed to do a really stupid thing and delete
my source code file. Did anyone take a copy of the
source and could they email it to me as I now wish
to update the program.

Thanks for any help

It's not that the Pokey is terrible complex, it's just that it works so
differently than the sound hardware in today's PC's. So it's hard to get
right, especially for the distortion.

>there's obviously something else to it.
It has been a few years since I played this but I can tell you a
little about Koronis Rift. You drive around the planet's surface
looking for wrecks on the ground. When you find a wreck, you send your
Repo-Tech robot out to plunder the wreck (can't remeber the key needed
to do it). The repo tech will then return with whatever technology
was in the wreck. You may use the technology to augment your tank or
you may have it analyzed for points (can't remember everything about
this.) You can find shields, propulsion systems, weapon systems and
some esoteric things like a musicbox. Incidentally, the color of your
weapon and shields are important. A red laser is largely ineffective
against a red enemy. Weapon colors should be chromatically dissimilar
to your targets. Your enemies (saucers, last level -ground bases)
also have color coded weaponry. Pay a mind to your shields. I lost
the docs to this but I hope what little I remembered helps.

Used the "Create custom image" Of ape and just created one that was as
long as I wanted. I did it mainly because of d/l time and homepage
storage. Since I have a gig partition, all my old atari stuff takes up
minimum 32k of disk space for each program anyway.

Sound works great in Mac Rainbow - it's just too fast or slow because it can't be set to exact 100% emulation speed. I think timing is the problem there.

True. Atari sound is straightforward if you don't get too picky on the
exactness of the distorted sounds which are extremely difficult to
get right unless you use samples.

I have the following Atari Hardware and Hardware available as of
7-19-96

EQUIPMENT:

130XE Computer (doen't work-something wrong), Good Power Supply,
Manual $10 + SH($7-8)

300AT Modem by Supra with software($4) + S&H

Atari 850 Interface, Power Supply and printer cable. $50 + SH

2- Atari joysticks

1 - Suncom Tac 5 joystick(have $5 offer,waiting on payment)

SOFTWARE/CARTRIDGES:
Star Raiders CXL4011
Qix CXL 4027

Antic Magazine Software Disks from May 87 to June/July 1990
(have a $1.50 each for these disks, waiting payment)

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Take any of the above books for $5 & SH or
Take all three books for $10 & SH

SOFTWARE:

Most include manual/instructions

1. THE NEWSROOM (5 disks with lots of clipart)
this is an excellent publisher $20 & SH

2. THE PRINT SHOP - a excellent bundle including:
The Print Shop
The Print Shop Companion
Three Graphic Disks
Holiday & Special Events Graphics Disk
No Frills Software Fonts & Borders 1

7 Total disks $20 + SH

3. TYPESETTER by Xlent Software $5 & SH

4. MAGNIPRINT by Alpha Systems $4 & SH

5. a 3 disk bundle by HI-TECH EXPRESSIONS include:
CardWare
AwardWare
AwardWare Graphics $8 & SH

EXCELLENT GAMES AVAILABLE:

1. THE SEVEN CITIES OF GOLD
by Electronic Arts (made M*U*L*E) $5

2. KARATEKA by Broderbund
excellent Karate game $5

3. SUPER BOLDERDASH
by Electronic Arts $4

4. MICROLEAGUE BASEBALL(1984) $5

5. LEADER BOARD - Dual Pack
Excellent Golf Game includes
Double sided disk with the LEADERBOARD
on one side & Tournament on other $5

6. GAUNTLET
by Mindscape
Excellent Arcade Game
(must have 800XL, 65XE or 130XE) $5

7. HACKER
a simulation games that forces a player to
hack their way into a system. This
game purposly comes with no instructions $4

MISC

1. FAMILY FINANCES I & II $3
by Atari

2. PAINT MASTER DISKETTE $2

3. DIAMOND OS by Reeve Software $3

Take ALL the above software in a disk case for $75 & SH
(cartridges not included)

DISK CASE (hold 100 5 1/4 floppies) $5 ea & SH

---

40 Blank 5 1/4 Disks $10
with disk case $15

I also have about 60-65 5 1/4 disk full of arcade games of unknown
origin. I'll sell all these for $15 & SH. I'll even throw in a disk
case.

Take all above SW and two disk cases for $120 & SH.
(and I throw in the remaining cartridges and 2 Atari joysticks)

COD or personal check (with stuff being sent out when check clears).

Buyer pays shipping.

Make offers including shipping.

637. Joystick Support of Emulators?

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-20 00:00:00 UTC
From: daniel11@appstate.campus.mci.net
Message-ID: <4sr0ek$oeg@news.campus.mci.net>
Source record: 81899

I just realized after 4 months that, hey, I can plug a joystick in my Pentium. Can someone recommend the most atari-like one?

Ideally I would like to use my actual atari joystick but I don't think I could get a converter that would work for the output of it.

Xformer supports joysticks I think, but I keep hearing that XL-it has the more natural Atari 'feel' to it. When will XL-it support joysticks? Another XL-it suggestion is that it might include a mouse driven interface ala the Coloeco emulator for Win95.

Daniel

Ah yes, I remember. When running it on my 800XL, this crashed the game. I also tried bombing my own airstrip when using a translator to emulate the Atari 400 (don't ask me why I did this), and it didn't crash, but I can't remember what happened.

Ah yes... those were the days when games were games. Forget D**M, give me Boulderdash any day.

>Rob.

Just out of curiosity, is it possible to playback the tape on a standard tape-recorder and sample the sound of the tape with your PC's soundcard, and then get the file on the tape from the sampled sound? What sampling rate would be nescesary to ensure that the data can be sampled. Perhaps, it may even be possible to retreive data from damaged tapes that have been stretched. This would be done by analysing the wave to see where the wave rises and falls.

Do they have some sort of program for the Atari 8=-bit that will automagically put some music in my demo, or some music that is ready to be put in there? Or am I going to have to write it all myself? Or can I find some sucker in Poland that will do it for me?

Preferrably the latter because I'd like to put some recognizable rock music in my demo and all I can find are AMP versions that really don't do it justice, and I know the Atari can do better (I've heard it). But I guess if they don't like rock and roll as much in Poland, I'm screwed because I haven't met anyone on IRC who speaks good English, AND knows anything about coding.

How? I'm curious!
I've got a Happy 1050 drive, and so far, I've been relying on MYUTIL to transfer stuff between the PC and XL. This tends to work for a while, but soon, MYUTIL has trouble reading the disk, and in some cases, I have to formart it again on the XL (fortunately, I use a seperate disk to do all my transfers with). I'm wondering if my Happy drive is better at handling MSDOS disks than my PC's drive is at handling Happy DD disks. Most of the time, MYUTIL can read or write a few disks before it buggers up the PC's diskdrive. After that, I have to 'reset' the drive. If I'm lucky, typing 'dir' with no disk in the drive usually resets it (I have found that I have to do this nearly every time after using MYUTIL before it can read MSDOS disks again). In the worse case, the drive doesn't work for a while (even when the PC ihas been powered down for a while, but it eventually works again). Also, I always format the 'transfer' disks on my Happy drive (I can never get MYUTIL's Format command to format Atari disks on the PC).
BTW. I've got a 1.2 MB 5.25" diskdrive on my PC. Some people say that MYUTIL doesn't work with this, but I've found that it works for a short time. Is it possible to permanently damage the diskdrive this way?

AE.

Yes, that is possible. This has already be done for the ZX Spectrum (incl.
recovery of damaged tapes).
I have to admit that I'm not able to write such a tool with my actual knowledge
and I don't have enough time to learn it at the moment.
But perhaps someone else feels encouraged !?!? It would be nice to have
an Atari tape-file-format (like in the C64 scene). I would add support for it
in XL-it!.
Perhaps some of the other emulator authors have thought about this, as well !?

Bye,
Markus

651. Atari .pic to IBM .gif conversion

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-20 00:00:00 UTC
From: daniel11@appstate.campus.mci.net
Message-ID: <4sqvap$o75@news.campus.mci.net>
Source record: 81913

I took some of you all's advice and did the screen capture trick from Xformer to make a GIF file from the PIC files displayed by the emulator. The problem is the size. The colors are all fine but the size of the new GIF is like twice the resolution of the original PIC.

I don't want this. So I resize the GIF with an IBM program, but as it gets smaller, some pixels get mangled. The picture gets squeezed wrong. I don't want this.

I want a pixel to pixel conversion of the original art. Is this a realistic expectation? How about an 8bit conversion program that makes GIFs of a modern GIF format? Is there such an animal?

Then I could use the excellent ImageManager program (Thanks Ivan!) to move the GIFs from the image to my IBM harddrive.

The XEGS(The proper name of the XE Game System), is as far as hardware goes...a 65 XE computer; also same as the 800XL model. You should be able to load cassette games while holding down 'Start' while turning it on.

To get it to play games that only run on the 800, get Fix-XL or the Translator disk which should be in a PD library somewhere. Hope this helps...

(Mr. Ellman and Dr. Jest and somebody else talk about converting
Atari cassette programs to disk load files.)
Uhmm. Dr. Jest, I'm gonna take you serious, in all seriousness.
The idea of playing a tape back and using a sound sampler, whoa.
No, I don't think it'll work. I don't remember, seems like I
tried copying an Atari tape using a standard tape deck. I don't
think it'll work, either, but I don't remember. One thing,
the atari cassette works on FM and audio tape players/recorders
use AM. That presents some problems, I guess.
I used to do this sort of thing, take a tape and make a load
file out of it. There are utilities to do this around, mostly
just simple, non-protected single stage boot tapes.
Making a load file out of a commercial protected tape is not
real easy or straightforward, It can be done, but requires
some funky what I call hacking/cracking. Probably, Dr. Jest's
tapes are commercial tapes, in the category that are not
easy to fix. WAIT A SECOND, he wants to go the other way,
make a tape out of ATR files. Oh, for goodness sakes, maybe
the best thing is to get an old ANALOG magazine that printed
BASIC programs with hex data for making either boot tape or
load file. That won't help much. A boot tape has a header
. Gees, I'm rambling. So YES, it is possible, but probably
not worth the effort as every person I ever helped with
a disk to tape conversion used the program less time than
it took me to convert it and got a disk drive, which is
what I suggest Dr. Jest do.

666. APE cable common problem?

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-21 00:00:00 UTC
From: nickb@Primenet.Com
Message-ID: <4ssn7p$t12@nnrp1.news.primenet.com>
Source record: 81928

I think my ape cable crapped out on me. When it is plutgged into my Atari, no matter what is on the PC end, instead of making that farting "nothing there" noise or booting a disk, it makes this turntable-scratch sound you usually only get when you insert a disk sideways or something, and goes to BASIC or self-test or whatever. The APE software will report that it's getting requests, but I don't know what all that hex stuff means though I know enough hex math to know that the checksums check out.

I unplug the sio side and it goes back to normal.. normal being no disk drives, no errors...

Is this just a sign of age? (about one, two months old) or wear? (I might have stretched it, there are no grommets in the little box)

It's not in the docs.... and I'm having a friend look at it in a few days anyway. Yes, it's the 1489 version. I'm just wondering if this is what happens after a while.

gee, and right after I downloaded all that junk, too....

Body handling: Inline uuencoded payload not displayed: Mo'slo.com

Hey, Yogi!

I have a nice clean 'virgin' player master disk for Ultima 3 if you still need the .ATR image of it. It was taken from my original which I checked and verified today. I could email the .ATR image to if you'd like. Let me know, huh? Also can you help me out if possible? Could you please shed some light on how to use the 'attachment' listed below & others like it that I've seen elsewhere? The one below is for mo'slo.com for the PC (a small tsr that slows down your too fast PC). I don't necessarily need this particular file; I would just like to know how to get (convert?, decode?) it into a structure that does something. I've also seen these as .zip files; but zipped files should all have the characters "PK" at the beginning shouldnt they? The file below & others like it, all have the common "M" at the beginning of each line. Also,how do you post files (attachments)so that they end up this way?

Regards,
Sergey

Hey Atari 8-bitters!

Please come to my chat page this Wednesday (and hopefully every Wednesday)
at 12pm noon (Pacific Time).

No fancy web browser is needed. Just load up Ice-T or FlickerTerm 80 and
run Lynx! :)

http://zippy.sonoma.edu/~kendrick/chat/

I will hopefully have, on occassion, some famous people from the 8-bit
scene (of today and yesterday). For now, though, this is just a place
to get together once a week and talk Atari!

See you there!

I am posting this message for a friend without his own Internet account.

ALL SOFTWARE PACKAGES ARE ORIGINALS. THEY CONTAIN THE COMPLETE DOCS, DISKS,
AND BOXES unless noted otherwise. All opened disks have been tested and I
will guarantee they work.

Feel free to make reasonable offers on anything below. Few prices are firm,
especially if you are buying several other items.

SOFTWARE FOR SALE:
AMIGA 3.5":
Arkanoid, disk only.....$2
Jack Nicklaus' Golf, no box.....$4
Midwinter.....$4
Netherworld, disk only.....$2
Pioneer Plague, no box.....$5
Warlock.....$4
APPLE II+/E/C 5.25":
15 different PFS:File, PFS:Graph, PFS:Write, etc... 50 cents each disk
(I can provide a complete list if interested in exact PFS titles)
ATARI 8-BIT 5.25":
Print Power (Atari/C64 disks).....$3
Tomahawk (Atari/C64 disk).....$4
ATARI ST 3.5":
E-Z Track MIDI Sequencer, unopened...$3 (also have one opened for $2)
Zork I, disk only.....$1
COMMODORE 64/128 5.25":
Ace of Aces.....$4
Beyond Dark Castle, no box.....$4
Blue Angels.....$3
Border Zone, no box.....$4
Deceptor.....$2
Defender of the Crown.....$4
Die Hard.....$3
Force 7.....$2
GEOS Desk Pack I, no box.....$2
Grave Yardage, no box.....$4
Kings of the Beach, no box.....$4
Murder by the Dozen, no box.....$4
Oil Barons (big and heavy package)...$2
Paperclip 64, no box.....$3
PHM Pegasus.....$3

Pipe Dream, no box.....$4
Print Power (Atari/C64 disks).....$3
Sky Runner.....$2
Tomahawk (Atari/C64 disk).....$4
Top 20 Solid Gold (Cosmi), no box....$3
Top Fuel Eliminator.....$3
TV Sports Football.....$3
X-15 Alpha Mission.....$3
IBM 5.25":
Sword of the Samurai.....$4
MACINTOSH 3.5" (not games):
Click Change 1.04.....$3
Mac Plot, standard V3.4.....$3
Rival 1.1.4.....$3
Status Mac, unopened.....$5
(1991, System 7 compatible)
TI-99/4A CARTRIDGES:
Beginning Grammar, no docs/no box....$2
Household Budget Management, no box..$3

HARDWARE FOR SALE:
Apple IIGS/Mac MIDI interface (manufactured by Apple) with cables & docs,
(plugs into ADB port).....$16
Commodore 64/PET Datasette.....$7

For people on the West Coast near California (unless you like to pay
outrageous shipping prices on the following heavy items):
* At least 4 working 1541 disk drives
* 1 working 1571 disk drive
* 1 working Commodore MPS801 printer, broken ribbon, no docs
* 1 working Commodore MPS802 printer, with tractor unit, extra ribbon
If anyone cares to take all of the above at once, $15 each + shipping.

SOFTWARE WANTED (will also trade for/possibly buy):
ATARI 8-BIT 5.25":
Clowns & Ballons
TI-99/4A CARTRIDGES:
Beyond Parsec, Bigfoot, Choplifter, Computer War, Crossfire, Joust,
Jumpman Jr., Munchman 2, Scrabble, Space Journey, Spy's Demise, Tris

==========
The above prices DO NOT include shipping. I'm in California. Depending on
how far away you are, how many items you want, if they have boxes, and how
heavy everything is, the shipping cost usually ranges from $3 to $8 UPS or
priority US mail. I don't have time to deal with lots of small transactions,
so I need to ask a minimum of $15 worth of items. If you are interested in
buying a lot of stuff at once, I will try to make you a deal on the shipping.
In general, a few pieces of software cost $4 or $5 to ship. Leaving out the
boxes will often significantly reduce the shipping cost.

I will only ship within the UNITED STATES and to CANADA.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the message
or in the subject header: "Forward to Randall". Because these messages will
be hand-carried on floppy disk or sent to me via modem only once or twice
per week, it may take me a little while to respond.

Simply put, NO. You can build .XFD or .ATR Atari emulator disk image files then using something like SIO2PC, copy them back to your 8-bit. OR copy the files to your 8-bit using a null-modem cable and communications software on both ends. The latter works well for me.

I've been trying GIFNcode. It doesn't appear to work. It totally
messes up the PIC's I try to convert. My PIC's are the standard atari
picture files, saved with a program called BBKart.

Anyone actually use GIFNcode who knows what might be wrong?

Daniel

Sergey,

This is a UUENCODED file. Back in the days when all that e-mail could handle
was 7-bit ASCII, a way was devised to convert 8-bit to 7-bit. What you wanna
do is get ahold of a decoder (check any SimTel archive for half a dozen
DOS-based uudecoders), cut the file where it says to be cut so the FIRST line
in the file is
begin xxxxx
and the LAST line is
end
then run your decoder on that file and you'll end up with an executable, or
ZIP file, or something...

682. Upper limit on Sparta DOS partition?

Source record: 81944

MyDOS 4.5 reportedly supports volumns up to 16 megs. At one point
there was a rumor of version 4.6 that would allow for larger
partition sizes. As this version ever been released?

How about the maximum partition size for Sparta DOS 3.2g?

I have a blackbox connected to a 100 meg HD. I don't think that
I have nearly enough software to fill even the 16 meg limit.

I agree with that, and I'd like to add that 12 p.m. noon is a bit early
for some people, who may be at work during that time. Me, I get out of
school right now about that time, and can probably get home by about
12:15. But I'd much rather IRC, because having limited experience with
Lynx as a chatting tool, and knowing how screwy the Web can be, and the
fact that I can't abort the loading of a web page without quitting thew
whole browser..... IRC would just be better.

684. Wireless Joy Sticks

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-22 00:00:00 UTC
From: depeche@rtd.com
Message-ID: <4t0jj2$ip0@rap.SanDiegoCA.NCR.COM>
Source record: 81946

I saw this in a "American Science & Surplus" catalog, so I thought someone here might be interested.

"Atari From Afar"

"Remote joy sticks made by Cynex in Korea for Atari 400 & 800, Sears and Commodore VIC20 video systems and home computers. Game Mate II(tm) system consists of (2) joy stick units with radio transmitters and a receiver that hooks up to the regular joy stick inputs on the Atari game unit. Put a couple of batteries in the units, hook them up following the simple included instructions, and you are all set to play the game from further afield. Except that the units appear used and are, we believe returns from customers. Thus they may not work right. On the other hand, perhaps the customers failed at the games they attempted and blamed the joy sticks?! Try your own luck."

"20665 Wireless Joy Sticks $7.50 a set"

Fax Orders 800-934-0722, Phone Orders 847-982-0870
American Science & Surplus
3605 Howard Street
Skokie, Illinois, 60076

Considering how obsolute hardware for the Atari will eventually just disappear, perhaps this might be useful for somone.

687. Another dead 1050 disk drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-22 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <31F3461B.454F@rcp.co.uk>
Source record: 81949

Hi,

I know that there has been many mails about dead 1050s
in this group and at the time I ignored them all as
my 1050 worked. But alas...

Anyway the problem is:

When I switch it on the head moves about 1/2 inch towards
the centre of the disk and stops. So I switch it off and
on again and it moves another 1/2 inch towards the centre.
I never actaully studied it when it worked but I guess a
working one should move the head all the way to the centre
of the disk and back again.

Does this sound like the stepper motor is bust or could it
be a transister or a capacitor or something.

Anyone have any ideas?

Any help appreciated.

There is a program for the 8-bit called GIFNCODE.COM (I believe it is), that will convert 8-bit images to GIF. Once you do the conversion you can use them on any computers that supports GIF. Just be warned that 8-bit images don't do well on high res systems. They come out very skinny. 80 pixel gr.9 pix tend to be the worst. The ones with higher horizontal resolution (192 or 320 pixels) seem to come out better.

The only problem here is that neither pbrush nor PS Pro handle GIF.
Use one of these to capture the image to a BMP or PCX format file then
use Graphics Workshop ir MS Office Imager to convert to GIF or any
other major file format.

It worked fine for me. You do have to use a good-quality deck and turn off
all noise-suppression stuff like Dolby, however.

>One thing,
>the atari cassette works on FM and audio tape players/recorders
>use AM. That presents some problems, I guess.

Not strictly accurate. The recording is always plain analog. "AM" and "FM"
mean nothing in those terms. Decoding the data is a different kettle of fish,
but that has nothing to do with the actual recording technique.

If you're asking about a bidirectional parallel port, the 850 port is
strictly output only. As far as I know, SIO2PC should have no problem
working with a parallel-port drive attached to the PC.

697. Portfolio stuff wanted - UK

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-22 00:00:00 UTC
From: drc@YES.york.ac.uk
Message-ID: <drc.45.000BC8BB@YES.york.ac.uk>
Source record: 81959

I've recently purchased a second-hand Portfolio. Lovely little beast, but lacking in so many things, like memory cards and other storage media.

Does anyone know how I can get hold of anything like a floppy drive, or some such, or any memory cards. Or anything really. First, second or fifteenth-hand.

Cheers muchly,

Dave C. Windows 95 into Portfolio wont go. Bloody good job too.

>are either reserved or not used. What is he doing here? I don't have a
>db25 serial port on my PC, so I wanted to convert this to db9. Can't be

The reason that you can't match up this cable to your RS232 db9 is
that the XFormer cable is designed for the parallel port (printer).
The SIO cable and PC XFormer cable are completely different animals.
The SIO is for serial ports but needs extra chips and circuitry to
convert TTL levels to RS232 levels. The PC XFormer uses input and
ouput bits on the parallel port which are already at TTL levels.
Trying to build the XFormer cable for a serial port may end up
disabling your system!

704. Odyssey^2 and Odyssey^3 videogames FAQ

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-23 00:00:00 UTC
From: kaiser@pofvax.pnb.sunysb.edu
Message-ID: <4t3b4i$e14@abel.cc.sunysb.edu>
Source record: 81824

Robert D. Kaiser kaiser@pofvax.pnb.sunysb.edu

Odyssey2 (Philips G7000)
Odyssey3 Command Center (Philips Videopac + G7400)

Welcome to the world of the Odyssey^2 and Odyssey^3 !
Magnavox's Odyssey^2 was a popular American videogame console, sold
in the United States from 1978 and 1983. It never was quite as
popular as the Atari 2600 or Mattel's Intellivision, but it did
sell more units that the GCE Vectrex, Bally Astrocade, Emerson
Arcadia 2001, Fairchild Channel F or the RCA System II.

It is less well known that the Odyssey^2 was even more
popular in Europe, where it was marketed by Magnavox's parent
company, Philips Electronics. In Europe (and in other parts
of the world as well) the Odyssey^2 was sold as the Philips G7000
Videopac console. In France, it was known as the Philips C52.

Around 1983, the videogame market was beginning to
contract, and the Odyssey^2 totally lost its market share to the
next generation 8 bit videogames like the Colecovision, Atari 5200,
and the original Nintendo. In order to compete, Magnavox developed
their own next generation system, code named the Odyssey^3. Later
press releases revealed that it would be termed the Command Center.

The Odyssey^3 Command Center was to have 16k ROM, 16k RAM,
and a capacity for detailed background and foreground graphics.
The keyboard was redesigned to have more keys, and a real computer
keyboard was added in place of the Odyssey^2's flat plastic
membrane. There was a built in joystick holder, so that one person
could use both joysticks at once, for arcade style games. The unit
also had two planned accessories: A voice synthesizer and a 300
baud modem. The Odyssey^3 Command Center was hyped to the press,
and previewed at the 1983 Consumer Electronics show.

It never was released.

For years, people searched for prototypes of this unit,
although the chances of finding one were slim since only a few
prototypes were made. In time, the Odyssey^3 became known
as vaporware among most, and a 'holy grail' of videogame collectors
among those who knew that a few prototypes really existed.

Last year I made an amazing discovery: Philips had
released the Odyssey^3 ! It was only sold for a limited time in
1983, and 16 cartridges were ever made for it - but it did exist!
It was sold as the Philips Videopac + G7400. The Videopac +

console had almost exactly the same internal hardware as the
American Odyssey^3 prototype, but externally it was very different.

The keyboard did indeed have extra keys, but a flat plastic
membrane keyboard was used instead of a real keys to save costs.
Also, there was no built in joystick holder.

The Philips Videopac + G7400 could play four types of cartridges.

(1) All the standard Odyssey^2 / Philips G7000 cartridges.
The backward compatibility would ensure that many Odyssey owners
would upgrade to this system and still be able to use all their old
games.

(2) A series of remakes, in which popular Odyssey^2/Philips
G7000 games were re-released with high resolution, beautifully
rendered background graphics, similar in quality to what one would
see on a Colecovision. If these game were played on a regular
Odyssey^2/ Philips G7000 the game would play just like the classic
version, but the high-res background graphics would not be visible.

(3) A series of totally new Odyssey games. These had standard
Odyssey foreground graphics but also had high resolution background
graphics. If these game were played on a regular Odyssey^2/Philips
G7000 the game would play correctly, but the high-res background
graphics would not be visible.

(4) A series of totally new Odyssey^3/Philips G7400 only games
that could only be played on the Odyssey^3 or G7400. These games
not only had hi-res background graphics, but they had hi-res
foreground graphics, scrolling screens, multiple screens and the
ability for more complex gameplay. Only four such games were ever
made: Norseman, Helicopter Rescue, Trans-American Ralley and the
Home Computer Module.

Rarity: C = Common
U = Uncommon
R = Rare
ER = Extremely rare
UR = Ultra Rare
P = Only exists as confirmed prototype

NR = Never released/No known prototypes. Games in this
category may have been advertised, or just planned,
but apprently never even made it to the prototype stage.

Voice and music synthesizer.

GE7710 Odyssey^3 Command Center P
GE7610 Odyssey^3 Voice Module P
Odyssey^2 Pink Panther NR
Odyssey^2 Sherlock Holmes P
Odyssey^3 Modem P
Odyssey^3 Flashpoint P
Odyssey^3 Baseball P

Odyssey^3 Killer Bees P
As an American release, this only exists as a prototype.
The prototype for the American version has not yet been found, but
I have seen a videotape of this game in action. An altered version
of this game was released in Europe (UR), the difference being that
the background graphics are completely different. In the American
prototype video we see a colorful geometric background, while in
the European release we see a yellow honey comb, and several large
'Killer Bees'.

Odyssey^3 Attack of the Timelord P
As an American release, this only exists as a prototype.
However, this game was released in Europe as "Terrahawks +" (ER).
Oddly, two large stars blink in the American version, yet are
static in the European version.

Odyssey^3 Freedom Fighters P
As an American release, this only exists as a prototype.
However, this game was released in Europe as "Freedom Fighters +"
(ER). One notable difference is that the background graphics for
this American version are *not* used on the European version.
Instead these background graphics (of a big red floating asteroid
and a starfield) are used on the European Videopac "Satellite
Attack +" which is the European Odyssey^3/Philips G7400 version of
"U.F.O.!" The G7400 version of "Freedom Fighters" features a
background with several planets (one with rings) and a starfield.

I remember a Carina BBS in Ohio called Pandora. The sysop, Frank Seipel,
had PC Pursuit, which meant that during certain hours, data calls to most
anywhere in the country were free. So he arranged the system so it would
call you back long distance, and so you only paid for that one minute.

I was one of probably more than one 300 baud lamer who spent three hours a
night on there. They just had more files than I'd ever seen anywhere.
And online games. And NO TIME LIMIT. That's not something you want to
unleash a 300-baud eleven-year-old on.

With the advent of the internet, this ought to be easier.

Perhaps you could arrange the BBS to be accessible only over the Internet,
and have a Unix program act as a liaison for telnetting in.... but how
many telnet clients would support ATASCII?

If you need to replace a broken transformer, here's a good chance you can fix
it instead.

Crack the thing open and check that fuse. Clip it out and replace it. Even the
shmo at Radio Shack can help you through this one if necessary.

Cheers-

m w "The Atari is STILL a good computer!" grossmann

709. XF551 □□□□□□Need Help on XF551

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-23 00:00:00 UTC
From: kim.renteria@abq.com
Message-ID: <tcpnntpd.16.7.23.23.2.2.2577039569.16503065@abq.com>
Source record: 81829

I have two XF551's, one of which has died. The reason for death is a bad rom, I believe. The part number is C101696-002. Does anyone know what a compatible prom or e-prom might be that I could use to copy the good one onto? I went to an electronic parts store; they were no help as soon as they saw the ATARI name on the chip. It would seem to me though that there must be some available replacement blank prom (or am I wrong?) My second problem is getting the copy made, but I will cross that bridge when I come to it. BTW, I am posting this using my daughter's Atari and account since I am located out of country and am here for only the next couple of weeks.

Thanks in advance,
Kent

I have the following Atari Hardware and Software available as of
7-23-96

EQUIPMENT:

300AT Modem by Supra with software($4) + S&H

Atari 850 Interface, Power Supply and printer cable. $50 + SH

2- Atari joysticks

SOFTWARE/CARTRIDGES:

Star Raiders CXL4011
Qix CXL 4027(order pending arrival of check)

Antic Magazine Software Disks from May 87 to June/July 1990
(have a $1.50 each offer for these disks, waiting payment)

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Take any of the above books for $5 & SH or
Take all three books for $10 & SH

SOFTWARE:

Most include manual/instructions

1. THE NEWSROOM (5 disks with lots of clipart)
this is an excellent publisher $20 & SH

2. THE PRINT SHOP - a excellent bundle including:
The Print Shop
The Print Shop Companion
Three Graphic Disks
Holiday & Special Events Graphics Disk
No Frills Software Fonts & Borders 1

7 Total disks $20 + SH

3. TYPESETTER by Xlent Software $5 & SH

4. MAGNIPRINT by Alpha Systems $4 & SH

5. a 3 disk bundle by HI-TECH EXPRESSIONS include:
CardWare
AwardWare
AwardWare Graphics $8 & SH

EXCELLENT GAMES AVAILABLE:

1. THE SEVEN CITIES OF GOLD
by Electronic Arts (made M*U*L*E) $5

2. KARATEKA by Broderbund
excellent Karate game $5

3. SUPER BOLDERDASH
by Electronic Arts $4

4. MICROLEAGUE BASEBALL(1984) $5

5. LEADER BOARD - Dual Pack
Excellent Golf Game includes
Double sided disk with the LEADERBOARD
on one side & Tournament on other $5

6. GAUNTLET
by Mindscape
Excellent Arcade Game
(must have 800XL, 65XE or 130XE) $5

7. HACKER
a simulation games that forces a player to
hack their way into a system. This
game purposly comes with no instructions $4

MISC

DIAMOND OS by Reeve Software $3

Take ALL the above software in a disk case for $75 & SH
(cartridges not included)

DISK CASE (hold 100 5 1/4 floppies) $5 ea & SH

---

40 Blank 5 1/4 Disks $10
with disk case $15

I also have about 60-65 5 1/4 disk full of arcade games of unknown
origin. I'll sell all these for $15 & SH. I'll even throw in a disk
case.

Take all above SW and two disk cases for $110 & SH.
(and I throw in the remaining cartridges and 2 Atari joysticks)

COD or personal check (with stuff being sent out when check clears).

Buyer pays shipping.

Make offers including shipping.

Jay
Thanks

Jay

Well, if you've got a SLIP/PPP account, you can get a program on your
computer that will be an IRC client for you. Then, you have to find
some site that will be an IRC server for you (maybe your own ISP, maybe
not).

Speaking of which, my account doesn't support IRC, so I have to connect
to some other system. I used to go to ucsd.edu, but that no longer
works. Where else can I go?

Thanks

I know a guy who made a MIDI synth with multiple SID chips so I know
the SID chip can be transplanted.

I looked at this considering that these days Commodore 64's go for
$5-$10 at thrift stores. Judging from the schematic in the C64 user
manual, it SEEMS possible, however if I recall correctly the SID
depends on a 1 Mhz system clock. So installing one in an Atari *might*
involve overclocking the SID which might be problematic. At the very
least it would throw the audio range of the SID way off.

The hours it would take to make something like this work don't stack
up well against the cost of the Ultrasound ACE wavetable sound card
(well under $100 these days) I put in my peecee about six months ago.
:(

>In fact... would it be possible to put the ANTIC or POKEY chips in another
>computer? A non-Atari computer, of course.
I don't know. It would be cool though wouldn't it? It is possible to
put two pokey chips in an atari for specially written stereo software.

Atari video games used POKEYs. The Star Wars game used four POKEYs.
Ever wonder how they got the sounds so close on the better conversions
like Pole Position? I think for a while the POKEY was Atari's
workhorse sound chip.

Incidentally, I think all those old video games used the 6809,
sometimes several.

The dual POKEY upgrade is pretty cool. It's also trivial to adapt to
three or four POKEYs. I was never able to get the stereo sound nice
and clear and ended up tying the outputs of the POKEYs together and
putting them out the standard audio output, though.

Uh, that didn't work, as it sometimes did in the past. But thanks.

I fixed it anyway. My friend stripped the wires too much, and there was a
short. I turned it into a long and it's okay now.

From my high school days, I remember playing a game on my Atari 800 called Captain Beeble. It was a horizontally scrolling space ship game, as I recall. Details are kind of fuzzy and I never see the game mentioned anywhere. Does anyone know what company made it? Anyone have one for sale?

Thanks!

Chuck Steinman actually completed that project did he not? (at least
a prototype for himself) Is he still around? Last I talked to him I
was buying my transkey... perhaps he could share the schmatics and
code, and to hell with Atari. or JTS, or who ever they are now, as
they disowned us 8-bitters back in '89 was it?? It would be an
involved project, but maybe it is the only way for it to be available
to the masses.

Rainbow is an excellent Atari 8-bit emulator for the Macintosh.. With the proper ROMs you can emulate a 400/800, 800xl, 130xe, and 5200 game console. It is very fast on a powermac and is pretty much compatible with everything (I have found only some demos and weird cracks that don't work). If you have a Mac and want to relive the old days, roughly $30 and you can have a virtual Atari on your Mac!

: How about player disks for ultimas 1,2 & 4 ?

It's really only important for Ultima 2 and 3.

In Ultima][,You can only start a new game by copying the master player
disk (disk B,I think) over your player disk.
If you just downloaded the Diskcommed disks,remember to keep a copy of the
PLAYER DCM file so you can re-start.

>with your cable attached (or full color if you have an old 800 or XE).
>

As you can see above, I did specify the model of Atari. A 130XE. My problem
was the way I looked at the connectors as shown in the Commodore FAQ.
The way I looked at it had me trying to connect my video to the RGB connector.
Of course that didn't work. After I realized my mistake, I was able to make
a cable that works fine. I was surprised to see that artifacting worked,
since this is an 80 column monitor, I thought any programs using artifacting
to get colors would look all white. Of course the artifacted colors are
different than they were on the TV I had been using. Red and green are now
reversed, but you can't have everything!

Thanks to all the people that have responded with information.

>How about the maximum partition size for Sparta DOS 3.2g?
>
>I have a blackbox connected to a 100 meg HD. I don't think that
>I have nearly enough software to fill even the 16 meg limit.

I think the 16 meg limit is because the standard SIO command can
only address sectors upto $FFFF. 256 bytes x $FFFF = 16 megs.

It would be totally possible to make a bigger partition, if both
the receiving device could understand a 3+ byte sector number and
the receiving dos was designed for it.

It would also be possible to do fun stuff like sectors larger
than 256 bytes, etc. Then again, such a device/dos would be
incompatible with any existing software that accessed the
drive by sector numbers.

|
| I have a new WD 2.5 gig drive that does this after 5
| minutes of no access and I cant use ape at all during
| that period until its done (about 20 seconds)
|
|
Egads, 20 seconds! As I understand it, T-cal should only have to compare the drift between either adjacent tracks, or at worst, the innermost and outermost tracks, which should not take anywhere near that long. Are you certain there is not a problem with your drive? On most of the (admittedly much smaller capacity) drives I have, thermal recalibration takes no more than a second, if that long.
-
One solution to the problem might be to run Smartdrive under DOS, with write cacheing turned ON.
-
I can imagine what happens if you are using Windows, not writing anything to the drive for 5 minutes, and then it decides it needs to write something to the swap file during that time.

The Monkey Wrench II is a "right cartridge," useable ONLY in the
right-hand cartridge slot of the 800. It was put out in 1981 by an
outfit called Eastern House in Winston-Salem, North Carolina.
(Presumably long since out of business.) I have the manual that
went along with the cartridge; it runs 30 pages.

C |
C | On this line of thought (wasted 'bandwidth') ...
C |
C | ... Now if the FAQ keeper tries to keep the # of bytes
C | down, I think we all should be aware of this, like try not to
C | re-post Terry Ortman's entire for sale thing in a two line
C | comment on it ...
C | I'm getting fed up with the huge cross-posted mini-spams. I
C | hope others express something about this because I think it
C | is ruining the group.

I totally agree. Re-posting (a.k.a. "quoting") should be held
down to the absolute minimum necessary to convey the context of the
matter being discussed. There are a great many newbies out there
who need to learn how to edit their quoting! If quoting must be
done, the ideal is to quote one line -- NOT the entirety of the
original message.

RM | RANDY&TRACY wrote:
RM | > hi, I just got hold of Flickerterm (using VT100 term right
RM | now) and can't
RM | > get it to work. The docs say I need an R: handler. What ...
RM | is that?
RM |
RM | If you have an Atari 850 or ICD P:R: connection then all you
RM | need is the
RM | AUTORUN.SYS from any Atari DOS 2 or 2.5 disk. This will load
RM | the R:
RM | handler from the device.

That's misleading. Perhaps the original DOS disks sold by the Atari Co. had a file on them called AUTORUN.SYS which performed this particular function. But most Atarians over the years probably started out with second-hand or third-hand copies of DOS programs found on disks obtained from their friends, postal contacts, computer clubs, or magazine disks. Such disks would not necessarily have on them exactly the same files as the factory-produced disks. Many people may well have obtained copies of Atari Dos 2.0 or 2.5 without getting any AUTORUN.SYS file.

I have a number of Dos programs, including 2.0 and variants of it, none of which needs an AUTORUN.SYS program to load in -- either without a menu (like O.S.S.'s DOS-XL) or to go into menu mode (such as DUP.SYS). Even for AUTORUN.SYS files that are related to DOSes (micro-DOSes, lazyloaders, etc.), various different versions can be found on different disks. They're not all the same program.

AUTORUN.SYS is a filename that can be assigned to any program one wants loaded in when booting up. Just because people see a file on a disk titled AUTORUN.SYS doesn't mean that it's the same as the file you mentioned, or that running it will produce the same result you mentioned. Often the main program on a disk (maybe an application, maybe a game, whatever) will be given the name AUTORUN.SYS so that it'll load in automatically.

N | >... The magnetic coating wears off (just like on cassette and
N | >video tape). This can create bit errors (may be able to fix by
N | >re-reading sector over and over) or hard errors (kiss that
N | >stuff goodbye)
N |
N | I have first hand experience with this. ...
N | About 2/3 of the disks backed up fine to my PC. Most of the
N | rest had read errors ...
N | The worst problem was that 5 of the disks had degraded to the
N | point where the head of the disk drive scraped the oxide
N | right off the disk ...

Except for some old Beta tapes that were used 50 to 75 times
each (which wore out the sound track), I've never experienced any
problems with cassette tapes, video tapes, or 5 1/4" floppy disks
like what you describe. Not with 12-year-old floppy disks, nor
with 20- or 25-year-old cassette tapes! (At least not yet!)

Factors other than age may also be important in determining
how well these magnetic media hold up. Such as:

* QUALITY: Were the items high quality to begin with, or were
they cheap? Often there's not much difference between brands
available on the retail market, but sometimes there are supercheap
versions available that are lower quality, even when new.

* CONDITION: Have the items been used? Or ABUSED?! Have they
been mishandled, damaged, or worn out?

* ENVIRONMENT: How have the items been stored? In perfect en-
vironmental conditions, or in a dank, dusty, or dirty garage or
basement? Have the disks been in a smokey or a smoking-free
environment? If they're crusted with dust or a film of
tobacco residue, it's no wonder you're running into problems.

* RATING: Have you attempted to stretch disks beyond their
rated capacity? Back in the early '80s when 5 1/4" floppies were
still expensive some people notched the second side of "single-
sided" disks. I tried it but gave it up REAL FAST when I experien-
ced data loss problems. But some people kept on doing this for many
```

years. Trying to read those disks will likely produce undependable results.

I think there's more to it than just age. Disks I've had for a dozen years in dry and smoke-free conditions still work perfectly, even after being used many dozens of times. But other people's disks stored in damp or smokey conditions make my disk heads dirty and produce the problems you mentioned.

(J. King asks if he might should put a A8 BBS back up in
Carina.)
I got an opinion on everthing. NO, you shouldn't put back
up your BBS in Carina, unless Carina can do what PRO can
do that Tom Hunt is doing, that probably nobody else can
do because that's the way Tom is, because Tom has a way
to interchange qwk packets and network A8 bbses without
having long distance, which your bbs needs to be networked
because you prolly ain't got a whole bunch of callers
in Utah. Regards

762. Re: Commodore 1902A monitor question

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-24 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <xjAsnil.lmcclure@delphi.com>
Source record: 81854

In a message dated 7-18-96, Bruce Willard said:
|
| I just picked up a great Commodore 1902A monitor. It
| works great with my SNES using video and audio, but
| after searching the web and finding pinouts for the 130XE
| and the 1902A and making a cable, I get nothing. The pinout
| I found for the 1902A did not show a video connection, just
| ground, chroma, luminance and sound. Does anyone have a
| tried and true pinout for a cable to go between them?
|
|
You did not mention which Atari 8-bit model you have, but some lack the
chroma output line. If yours is one, then you will either have to
substitute the composite output line, or for better quality, modify
your A8 to provide a true chroma output.
-
One thing that bothers me is that you said you got nothing. Even without
the chroma line, you should have gotten a monochrome picture from the
luma connection alone. I suspect the problem is that the 1902A, like most
Commodore monitors, does not automatically switch between normal
composite and chroma/luma input. Check for a switch on the back panel
(possibly labled "CVBAS" or similar), or a switch under the front panel
that switches between RGBI/composite/split video, and try it in each
position. One of the settings should at least net you a greyscale pic
with your cable attached (or full color if you have an old 800 or XE).

763. Re: SID chip on Atari?

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-24 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <xBIu3II.lmcclure@delphi.com>
Source record: 81855

In a message dated 7-20-96, Nick Bensema said:
|
| I know there is a whole bunch of room on the Atari to put
| in extra chips and stuff. I was wondering if anyone ever
| tried installing a Commodore SID chip in there, and did
| anything with it?
|
|
It should work fine. The only hurdle left after installing it would be
to write the software to use it.
-
Since the SID was also used in the C-128, which ran at 2Mhz, the 1.79Mhz
clock rate of the Atari should not be a problem either. (In fact, the
C-65 prototype I have has dual SID's, and it is clocked at 3.58Mhz, so
unless that was a custom run, evidently the SID can handle even higher
clock rates than either the 128 or A8 computers use).
|
|
|
| In fact... would it be possible to put the ANTIC or POKEY
| chips in another computer? A non-Atari computer, of course.
|
|
The only problem I could forsee (at least with another 65xx computer)
would be with the clock rate. The ANTIC chip, at the very least, is
intimately tied to the clock rate, as is the GTIA. Since the only two
other popular 65xx computers (at least in the US), the 64 and Apple II
series, run at about 1Mhz, vs. 1.79MHz for the A8, you've got a large
problem. Also, you have to deal with the halt line.
-
Pokey is less problematic, although using a different clock speed, AFAIK,
would affect the reference clock it uses to determine the pitch of sounds.
-
I have wondered how difficult it would be to graft a GIME chip from a
CoCo 3 (since 65xx and 68xx buses are largely compatible). Since this
chip provides for ST-like resolutions (except for no 640x400 hi-res and
only a 64-color palette vs. 512 or 4096), and a memory mapper that
handles 512K of memory, and comes from a machine that operates at a
speed very close to that of the A8 (needing only slight underclocking,
which would affect the horizontal/vertical sync rate slightly), it would
be an interesting hack. Unfortunately, since there is not a ready supply
of replacement chips at reasonable prices, this be unlikely to ever be
anything more than a "see, it can be done" demo hack if successful.

If you are unable to run an irc client on your own machine, and your
ISP doesn't have irc on their machine, (very uncommon) you can always
get the source and compile it yourself on your host. Otherwise, the
easy way is to telnet elsewhere. I'm looking into exactly where for
you.
>
>Thanks
>-Jason

BTW, Jeff, I could help more if I knew your preferred platform for
netting. Glad to see your still lurking, and interested in chatting!
I tried to spur interest in this before, but I guess it takes Bill

Kendrick to spur interest among the "big names"... :)

Rick

James,
Just for a point of reference, JACS (The Jersey Atari Computer
Society) BBS is still in full operation and is active in ALL Atari
computer and game system related topics and files. The club is also
still active, albeit mostly Jaguar gamers these days. The JACS BBS
number is (609) 346-1224 and is run on an Atari 1040ST using Fnordadel,
a Citadel compatible BBS program. BTW, it is networked across the
country and Canada.
There is a version of Citadel for the 8-bit called ATKEEP. It was
written in BASIC XE and requires SpartaDOS and an R-Time8. That version
is not a network version, but if someone (hint, hint) could make it so
and get it working properly... I'd like to run one myself.

This is good to know. I was under the impression that because of
controller and sector size differences, that the PC drives couldn't do
it.
What are you calling your program? I'm sure there will be a big
call for this. Good Luck!!!

I bought that. I'm not sure if I still have it though. I'll have to
ask the person that has all my disks.

769. Re: cassette->atr

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-24 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <4t43ri$57r@madeline.INS.CWRU.Edu>
Source record: 81861

(I got a pre-prepared response, but I re-read the msg. and
I think Mr. T. meant he used a audio tape deck to copy
A8 tapes. The question of using a 'sampler' type thing in
Windows and extracting a A8 file from it, I don't think
that is posssible.)
(Ain't got no easy reader, this is all done by hand.)
JG>>One thing, the atari cassette works on FM and audio
tape players/recorders use AM. That presents some
problems, I guess.

RT>Not strictly accurate. The recording is always plain
analog. "AM" and "FM" mean nothing in those terms.
Decoding the data is a different kettle of fish, but that
has nothing to do with the actual recording technique.

I'll be satisfied if it is even a little accurate. I know
A8s tapes were unique, AFAIK, in that they used an FM type
of scheme in their recording of digital information.
Commodore, Sinclair, even IBM again AFAIK, used AM on their
tape drives.

Analog information can be represented in either 'ups' and
'downs' of AMplitude or Frequency changes (Modulation). The
magnetizing of the medium is such that there are 'stronger'
and 'weaker' areas of the tape, which is picked up by the
reading head. That would be AM. FM on the A8 would have a
single amplitude 'clock' frequency tone, upon which there
would be square wave pulses of frequency 'peaks' and
'valleys', instead of pulses of 'stronger' and 'weaker'
magnetism to record the digital 0s and 1s. I've heard A8s
were much more reliable than other computer tape drives
because of this feature.

I'mover my head here, but my point was that copying A8
tapes using an audio tape recorder might not work because of
the difference in techniques used by audio and A8 tapes. I
wasn't correct, as you mentioned you have successfully
copied A8 tapes using an audio tape deck. The digital info
on an A8 tape is still variations on a tone, so the tape can
be copied using an ordinary audio tape recorder. There must
be an analog to digital converter in there somewhere.

I also want to mention that most commercial A8 tapes used a
variety of copy protection techniques, some of which I am
sure prevented copying the tape using an audio deck.

Basically so I don't have to move the TV upstairs everytime I play
one of my 8Bit games.

(Talk about J. King putting his BBS back up, using Carina.)
I just wanted to point out that I didn't mean anything about
the state of Utah. There aren't many A8 callers anywhere,
I think and thus the need for some kind of networking.
Utah is the birthplace of Atari, or at least its founder AFAIK.

Here are several:

irc.primenet.com
irc.ais.net
irc.cerf.net

Once connected, type:

/join #atari

Other channels of interest are atari8 and atari_st (sometimes atarist). One
might reasonably hope that the channel w/o special designator will be all
Atarians, whereas the others are more specialized.

I bet his drive is going into its second power saving mode. Some drives
(expecially new and large ones) will spin down the platters after a
pre-determined idle time to save power and reduce heat.

If it is a problem, there are many free utilitys to tell your IDE
drive not to do this when you boot the system. They are little
.COM files about 1k in size that do only that and then exit without
taking up any memory.

Its worth a try at least :)

(R. Smith Ely asks about my ibm<->A8 program.)
I'm calling it PCUTIL on the ibm sid and SIO Plus on the A8
side. You mentioned ibm not being able to make a boot disk.
It can. Don't ask me, exactly why, but if you write the 128
bytes of the first 3 sectors (we're talking double density here)
the disk will boot, regardless of what else the other 128 bytes
are.

So, you're saying replace the boot sectors of the DOS disk with
AtariDOS boot sectors makes it bootable AND readable for all sectors? I
can see the boot part, but the rest would have to be 128 or 256
bytes/sector depending on the density and DOS--ie. SpartaDOS in double
density mode. I can see being able to read the rest with sector editor,
but can it be read by regular programs? AtariDOS boot sectors are
always 128 b/sector so that is single density even for Sparta and MyDOS
double and enhanced density. Hmmm.... Hey, if it works, then I want it.
I like utilities! I must have most of the ones that have ben floating
around over the years.

From: richczeta@aol.com
Message-ID: <4t8ni1$4k8@newsbf02.news.aol.com>
Source record: 81796

Hello,
I'm looking for a color composite monitor to use with my
Atari 8-bit's, Apple][']s, and modified 2600.

Does anyone have any suggestions/opinions as to which model
gave the best picture (particularly on Atari's) and has held
up best with time?

(Amdek, various Commodores, Apple Color Composite, etc.)

Any monitor I'd consider would need to have a built-in speaker,
too. A Chroma/Luma input would be ideal but isn't necessary.

Thanks!
Richard

It shouldn't be a problem to divide the Atari 1.79 MHz clock in half,
and underclock the SID at 895 kHz. It might still throw off the audio
a bit, but not nearly as much.

I have two Commodores, a 1702 and a 1902, and both are excellent. The
1702 seems to tolerate my barely-shielded 1200xl much better though,
but the 1902 does have the switch on the front and all jacks on the
back.

If your proxy server supports it, yes. If not, you can still do it if you can
telnet to an outside account; enter irc at the UNIX prompt and away you go.
Assuming you are good terms with your support people, ask them the proxy name
and port for using IRC through the firewall. Then put that info in your
winsock settings; you may also need to put them into mIRC's setup.

794. Return of Heracles Game

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-26 00:00:00 UTC
From: Guilherme <guil@vnet.ibm.com>
Message-ID: <31F9AC3C.55BC@vnet.ibm.com>
Source record: 81719

Hi friend, my name is Guilherme and i had a game called Return
fo Heracles to play on Apple Computers or Atari. Today i use PC but that
was the most interesting game i have ever seen and i really
would be very happy if i could play it on my PC 486 computer.
Please sell me this game for PC or help me like you can.
I would be very happy if you could answer this message
to my e-mail : guil@vnet.ibm.com.

Thank you very much,

Guilherme - guil@vnet.ibm.com

: (I got a pre-prepared response, but I re-read the msg. and
: I think Mr. T. meant he used a audio tape deck to copy
: A8 tapes. The question of using a 'sampler' type thing in
: Windows and extracting a A8 file from it, I don't think
: that is posssible.)
: (Ain't got no easy reader, this is all done by hand.)
: JG>>One thing, the atari cassette works on FM and audio
: tape players/recorders use AM. That presents some
: problems, I guess.
:
: RT>Not strictly accurate. The recording is always plain
: analog. "AM" and "FM" mean nothing in those terms.
: Decoding the data is a different kettle of fish, but that
: has nothing to do with the actual recording technique.
:
: I'll be satisfied if it is even a little accurate. I know
: A8s tapes were unique, AFAIK, in that they used an FM type
: of scheme in their recording of digital information.
: Commodore, Sinclair, even IBM again AFAIK, used AM on their
: tape drives.
:
: Analog information can be represented in either 'ups' and
: 'downs' of AMplitude or Frequency changes (Modulation). The
: magnetizing of the medium is such that there are 'stronger'
: and 'weaker' areas of the tape, which is picked up by the
: reading head. That would be AM. FM on the A8 would have a
: single amplitude 'clock' frequency tone, upon which there
: would be square wave pulses of frequency 'peaks' and
: 'valleys', instead of pulses of 'stronger' and 'weaker'
: magnetism to record the digital 0s and 1s. I've heard A8s
: were much more reliable than other computer tape drives
: because of this feature.
:
: I'mover my head here, but my point was that copying A8
: tapes using an audio tape recorder might not work because of
: the difference in techniques used by audio and A8 tapes. I
: wasn't correct, as you mentioned you have successfully
: copied A8 tapes using an audio tape deck. The digital info
: on an A8 tape is still variations on a tone, so the tape can
: be copied using an ordinary audio tape recorder. There must
: be an analog to digital converter in there somewhere.
:

: I also want to mention that most commercial A8 tapes used a
: variety of copy protection techniques, some of which I am
: sure prevented copying the tape using an audio deck.

If the patent runs out on it(which may take a while), then it would be
legally possible. Someone even suggested a 2600 on a card but it's an
idea right now. Sure beats emulators which run cheesy on a Pentium :P

Is there anyone out there, anyone I can contact, that will help me
put some music in my demo page?

Preferably, some classic rock, but I suppose I'll be happy enough if I can
get some ripped game music, if there is any.

Nothing elaborate or digitized.... I might need it to fit between DOS and
$4000... am I dreaming here? I could put the scrolltext there, I'm pretty
sure I'll have $9000-$bfff available....

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

799. Re: disks wearing out

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-26 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <31f8b8d9.391775@news.superlink.net>
Source record: 81724

```
-each (which wore out the sound track), I've never experienced any
-problems with cassette tapes, video tapes, or 5 1/4" floppy disks
-like what you describe. Not with 12-year-old floppy disks, nor
-with 20- or 25-year-old cassette tapes! (At least not yet!)
-
- Factors other than age may also be important in determining
-how well these magnetic media hold up. Such as:
-
- * QUALITY: Were the items high quality to begin with, or were
-they cheap? Often there's not much difference between brands
-available on the retail market, but sometimes there are supercheap
-versions available that are lower quality, even when new.
-
- * CONDITION: Have the items been used? Or ABUSED?! Have they
-been mishandled, damaged, or worn out?
-
- * ENVIRONMENT: How have the items been stored? In perfect en-
-vironmental conditions, or in a dank, dusty, or dirty garage or
-basement? Have the disks been in a smokey or a smoking-free
-environment? If they're crusted with dust or a film of
-tobacco residue, it's no wonder you're running into problems.
-
- * RATING: Have you attempted to stretch disks beyond their
-rated capacity? Back in the early '80s when 5 1/4" floppies were
-still expensive some people notched the second side of "single-
-sided" disks. I tried it but gave it up REAL FAST when I experien-
-ced data loss problems. But some people kept on doing this for many
-years. Trying to read those disks will likely produce undependable
-results.
-
- I think there's more to it than just age. Disks I've had for a
-dozen years in dry and smoke-free conditions still work perfectly,
-even after being used many dozens of times. But other people's
-disks stored in damp or smokey conditions make my disk heads dirty
-and produce the problems you mentioned.

Well, since the disks in question were not * MY * disks, I can't tell
you about any of the above factors. If I still had mine and hadn't
stupidly sold them 11 years ago, I'm sure most of them would have
worked. These were disks that came with a system I bought, and looked
like they were iffy to begin with (and yes, all of them were flippies)
```

800. Looking for C compiler

Does anyone own a version of Superman by Atari? Not the one by First Star Software but a completely different one by Atari Corp.

I Beta tested this game years ago for Atari. It was pretty fun but very difficult as well. It was arcade-ish if I remember correctly. I don't think it ever came out on the market, but when did that ever prevent a piece of software from being distributed!

The beta test was at a test site so I never owned the cart/disk.

I never had much luck on reliability with composite monitors, and it's probably even more iffy with a used one.

My recommendation would be a good tv with av inputs - I have to admit a little bias though. My atari is plugged into my 32inch Magnavox and the picture is more clear than I ever got from a monitor.

>: A8 tapes. The question of using a 'sampler' type thing in
>: Windows and extracting a A8 file from it, I don't think
>: that is posssible.)

FWIW, it has been done with other machines. The people over in comp.sys.tandy do this all the time with TRS-80 Color Computer tapes--they hook an old-fashioned mono tape player to the audio input on a sampling sound card, read the sounds in, and then use a custom-written program to extract the executable file. I believe it is also done with Sinclair ZX81 tapes. (Of course, most of the software for those two machines came on tape, so it's more worth the effort than with the Atari.)

Maybe somebody knows enough about tape formats used by various machines to know whether this is possible with Atari tapes, given that it _is_ possible with at least some other machines of the same era.

Yes folks,
I know he seems only harmless and funny, but there are people suffering real loss due to him, not to mention the rapid-fire Bull Shit this guy sends out. He seems to enjoy the aggravation he causes and the attention and doesn't even bother to read the flames... maybe this will get some real action:

You old timers need to protect the "newbys", if you ignore or condone his behavior, you will get the reputation he brings to your group.

If you folks in this newsgroups want to stop this guy phone or send similar mail as this to those listed at the bottom, (and any other interested parties you can think of!). Those of you who took a loss, here's your chance to put some real pressure on this guy. This went out today under our letterhead. bj nash

26 July 1997

An open letter to those who may be concerned.

Gentlemen,

This letter is to make you aware of the activities of a Mr. Terry Ortman, operating under the business name of "Starfleet Software Company" 1037 West Leafland Ave, Decatur, Ill, 62522-1537 Phone numbers reportedly are: (217) 423 6820, (217) 423 7430 I have further information such as SSN, Credit Union Acct, other contacts, etc, if needed to properly identify this person.

This individual is now performing illegal acts in the areas of pornography, fraud and possibly other actions of criminal nature using the Internet computer system and the mails.

I am the operator of a Computer BBS system here in Vista, CA (PDISG 619 749 2741)
and
also the owner and operator of Tel Pay Clearings, a phone billing service to which Mr. Ortman attempted to join.

We refused to do business with him due to his attempting to charge for merchandise he did not deliver, but since we run a free bbs, he continued to have computer access to it and it's Internet e-mail feature and as such to the vastness of the Internet.

During this time we witnessed many acts of his enticing buyers with a "low Ball" price, whereupon they would remit funds for computer merchandise, but Mr. Ortman, citing many excuses "out of his control" would never ship. When the customer would become irate, he would become extremely abusive, turning the fault on the customer, etc, etc.

This he has done many times and it is now time to try to stop him. He evidently has found that most people will not follow through and are satisfied with writing him irate letters, which I'm convinced he doesn't bother to even read.

I understand he was raided by the Illinois State Police on April 22, 1995, where they took away his computer equipment, but he is back at it again, apparently not having learned anything from it.

I wish to file a complaint against him for his harassment of us, but because we were perhaps too wise, he did not get to us where we suffered any monetary loss.

Ortman- Page Two

Here are described some actions of his that need to be looked into by the appropriate authorities:

> Using the mails to receive funds from people whom he has no intention of delivering material to should be a violation of postal regulations and perhaps local laws.

> Demanding that customers send cash or a check made out to him personally would indicate an effort to avoid taxes or that he cannot have a bank account due to nefarious actions in the past.

> Operation of a business with an International name playing on the tv series "Startrek", would indicate a complete disregard for copyright laws.

> Operation of a business from a residence would indicate he could be in violation of city zoning ordinances.

> Sending a non-stop barrage of abusive, threatening material to his defrauded customers accusing them of actions that justify his not delivering, that are designed to intimidate them against making good their claims. Many people have just let him have it, not wishing to be exposed to this treatment. There must be a law against this.

Free free to phone me at any time about this matter.

Sincerely,

William (BJ) Nash

starfleet.software@juno.com (Terry L Ortman) wrote:
>lots of overpriced rip-off stuff snipped<

Folks, please note: Terry Ortman, aka "Admiral Nuguru", has a NOTORIOUS reputation and should be avoided at all costs. He is known to lie about anything which he feels will make him money and/or feel better about himself. He is known to distort the facts in order to put himself in a better light. Several of his victims have been scammed out of money for hardware and/or software which Ortman claimed he wanted to sell to them; it is common practice for him to request cash or money orders made out to CASH (presumably so that he cannot be traced). He is VERY well known for sending harassing emails whenever he feels even vaguely threatened, mildly intimidated, or even casually put off. He constantly threatens with lawsuits ranging from $500 to several million dollars for no intelligent reason, and oftentimes he is perpetrating exactly the type of "crime" which he is accusing you of. (The funniest part of it, of course, is that he seems to be quoting Starfleet regulations or something when he "quotes" a "law". The guy just hasn't got a CLUE!)

In short: Dealing with Terry Ortman, aka "Admiral Nuguru", is an invitation for disaster. Unless you enjoy getting royally fleeced and harassed on a daily basis, I advise against dealing with him. Thank you.

Flames (and other messages) from Terry Ortman will, of course, be automatically filtered and responded to. Have a nice day! :-)

My 8-bit has a "cold start" button on it; I forget where I got it from,
but I remember it was easy to install. Hold down the "cold start" button
(and OPTION, if necessary), tap the RESET button, and release the "cold
start" button and the computer will go through a complete boot cycle
without needing a power cycle. RAM disk contents remain intact, too. :-)

= A powerful =

= Command.. =

= =

==========

One of the things that I hate to do with the 8-bit is

to keep turning off the computer to reboot. That includes

holding down the Option Key. But, there is a rather easy

solution. I call it E477! This is one of the those 'Wierd'

machine langauge subroutines built into the Atari 8-bit OS.

It is a program none the less. I'll just get right

to the point of this message. E477 is a way to 'COLD START'

the Atari 8-bit without hitting the on/off switch.

To hel* with that POWER SWITCH or even, (Grin)..I/O switch!

While using Sparta Dos, at the prompt, D1:...type

RUN E477. With Dos 2.os, or 2.5, use the 'M' selection.

Then just type E477. You first put a boot disket, such

as AtariWriter or a Game, Yes, hold down the Option Key

if you must and hit the Return Key. Why this was never

discribed fully to the 8-byte user is beyond me! So useful!!

But then again..I think know why.. **********

I have heard of 2 versions of lemmings for the Atari 8bit but have not seen either (posibly due to them never being finished). The first one is advertised on Bill Kendricks' New Breed Software page with a coming soon label next to it. The other one was programmed by a Slovakian guy who unfortunately passed away before the project was complete. Derek Fern (derek@dfern.demon.co.uk) of Micro Discount UK has the source code and is looking for a programmer to finish the game off.

When I used to copy A8 Cassette Games onto 5 1/4 I used a piece of software called Transdisk 4.0 (XL & XE only). It would allow you copy single and multi-part cassette software and then put these onto disk with a menu system. I have copied these disks as ATR images and they seem to work fine with SIO2PC or APE (not with emulators though !!).

I can send a copy via email if anyone wants it.

: up best with time?

: (Amdek, various Commodores, Apple Color Composite, etc.)

: Any monitor I'd consider would need to have a built-in speaker,
: too. A Chroma/Luma input would be ideal but isn't necessary.

: Thanks!
: Richard
: richczeta@aol.com

For the best composite video monitor, with no tuner, I would recommend
the Commodore 1084 monitor. It has a great picture and works excellent
with all Atari's using the composite or y/c outputs. It is also
compatible with all Commodore and Amiga computers, as well game machines.
I have one that is in new condition in the box, with about 2 hours use on
it. If you're interested, make me an offer. Glad to help.

Yes, that's one of the standards.

Did you know about this one?

You're in BASIC, and you want to restart the machine. You type "BYE <RETURN> and get either the notepad (on 800's) or the self-test. Then you hit <SYSTEM RESET>!

That's all there is to it!

828. Re: 8-bit ONLY bulletin board systems (BBS)

Pat Mulvey submitted the quote of James King's message, but not his response.

Pat, if I may be permitted, since I already sent James this answer in private:

I call The New Nest BBS on Long Island. From there, I can pick up both the
USF and the IAN nets. It's still very much in demand by local and LD callers,
and it obviously works in PRO.

The last Carina board around here went down several years ago. It was replaced
by a bbs running on an ST and still devoted to things Atari. It had a large 8-bit
following. It has since been replaced by a board running on a Mac and is now
devoted to another topic entirely.

I'd enjoy reading some feedback on local boards, but nobody seems to be forthcoming on this issue. PRO is still very much alive, and I hear that Carina is, too. How about the other 8-bit platforms? And, while we're at it, what about those boards running on other machine platforms that do such things as Fido, Atarinet, etc.?

From: winter@worldnet.net
Message-ID: <4tdg57$fgg@news.sct.fr>
Source record: 81745

When I turn on my ATARI-800XL, the computer goes to the internal test
program. The ROM tests OK, but when it goes on the RAM setup, the
first square ligths, and just after the second one lights, the computer
hangs. What's wrong ? A RAM chip dead ?
I don't know if I'm right, but for each 4264 RAM chip, I put a 4164
RAM chip just on it, to have these two chips "plugged" in parallel.
Then, I RESET the computer, but results did not changed.
I did the same tests with 4265 chips fro NEC. Nothing changed.
Any help would we very appreciated.
Please EMail me: winter@worldnet.net

-(http://mars.superlink.net/scharles/).
-
Lemmings itself is not available, but there is at least one clone of
it.
However, I am at a loss to remember the name (too much software, too
little gray matter)

839. FS/T: Atari 8-bit computer items [07/27/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-27 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4tcjc9$q7i@sjx-ixn4.ix.netcom.com>
Source record: 81752

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 07/23/96

NOTE: There are currently 955 ORIGINAL game screen shots available
on my web site, including some for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. For faster service, please
include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) No package deals on games or systems. All prices are clearly
listed.

6) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

7) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

8) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 5.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$ 5.00 Pac-Man
$10.00 River Raid (Activision)
$ 5.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 130XE Personal Computer Owner's Manual (132 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 9.00 Atari DOS 2.5: 1050 Disk Drive Owner's Manual (147 pgs.).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).
$ 9.00 Inside Atari BASIC [Atari / Reston] (183 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio
Shack for $7, plus tax. It allows for the connection of both 300 OHM

and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1200XL COMPUTER.

This item has not been tested.

$19.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #5

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 8.00

*****

LOT #6

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #7

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

840. Re: Need Atari Video Cable

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-27 00:00:00 UTC
From: fu511@cleveland.Freenet.Edu
Message-ID: <4tc8p6$bl1@madeline.INS.CWRU.Edu>
Source record: 81753

In a previous article, LMNC01A@prodigy.com (Mr. Anthony Venticinque) says:

>I lost my only video cable. Does anyone have an extra they would sell
>me at a reasonable cost.
>
Do you need a color composit 5 pin cable set up? If so, they are
easy enough to make. You can still get the parts at Radio Shack.
Is this for your Monitor? Color? If it is a standard RF cable with
the little 'BOX' (COIL) attached then it you might get away with
a standard 300 ohm cable with out the coil. Depends on the T.V.
you might be using..

I have found though experience that a small color T.V. say, 13" works
ok with out the standared video cable that came with the old xl/xe
series of computers. That's the video cable with the little round
black thing that plugs into the T.V. part of your computer. Some
of these cables had square boxes that the cable had attached
to it. These were coils that filtered out RF video noise. Made the
output to your Screen more readable and so tuned to channel 2
more clear.

Hope that helps..

I have a Superman 3 prototype for the 8-bit that was done by Atari. Kind of
hard to play when you have no idea how. Doesn't look like much graphically
either. And it's nothing like the 2600 version.

843. Still Trying to Get a Pixel-to-pixel Conversion of PICs

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-27 00:00:00 UTC
From: daniel11@appstate.campus.mci.net
Message-ID: <4tdi87$64q@news.campus.mci.net>
Source record: 81756

I have been trying to get some of my old PIC images transferred to standard GIFs. But I can't get a decent conversion. Both the emulators blow up the emulated screen and so the image gets distorted.

And the GIFncode program for 8bit just doesn't seem to work with my PICs.

Any help would be appreciated...

Daniel

From: daniel11@appstate.campus.mci.net
Message-ID: <4tdi1u$64q@news.campus.mci.net>
Source record: 81758

There's an IBM PC EGA version of Alternate Reality at the AR website, and I was wondering if anyone else has tried it. I have, and find it utterly charmless compared to my recollections of the Atari 8bit version.

If it had music, perhaps it would be ok. But it doesn't appear to have music. It makes ugly noises through the PC speaker though...

Anyone else tried this and made the music work? It's at

http://www.ksk.sala.se/~sp93rob/dungeon/misc/games.html

Also I have never quite made Xformer or XL-it run the AR ATR's quite right. Xl-it is still slow and I couldn't get the on-the-fly disk-image change to work. (But the sound is definitely getting there, nice job Markus). And Xformer just mucks up royally with half-baked sound and it won't even run it. (But Xformer is fast)

Anyone else have luck with this?

Daniel

Nope! typo error, 2764 is the correct one, IAm try'n to find the
rom code, I sold proburner here a couple of weeks ago, and sent the
disk of roms that might have had the XX551, I do have 1 eprom that
I modified for the XF551 for a 720k drive, IAm still hunting!!

(snip snip snip)

Excellent! This will save on mailing and acquisition costs definitely!
Unfortunately I only have 2 or three issues left in my collection (they
went the way of my 800xl - disappeared under mysterious circumstances)
but this was one of the best, most focussed magazines ever. One thing
you might add is a link to the Antic disk archive at ftp.clark.net,
under /pub/atari/mag/antic/. Maybe you can even place a link to the
appropriate file in articles instead of giving the computer listing.
I just checked the archive and the files are under directories corres-
ponding to each issue, that is the disks are not just one zip'd blob
file each.

Oh, and can you post the permission letter to the newsgroup, and have
the info placed into the appropriate FAQs (especially newbie). That
may lessen the confusion later on and the charges of copywrite infringe-
ment from people who don't follow this thread.

>Cheers,
>Kevin Savetz

ATASCII is a less colorful version of PETSCII. In fact there is no color,
but you can insert and delete whole lines with one character. This
would be great for full-screen editors, but there's no function to home
the cursor.

But if you have a PETSCII version, put it on FTP somewhere and point us to
it.

I am happy to announce the launch of the Digital Antic Project. Antic magazine was the premiere magazine devoted to 8-bit Atari computers. Antic, like the 8-bit Atari, has been forgotten by all but a small minority...

The Digital Antic Project is a small crusade to put all of the old issues of Antic (and eventually its sister magazine, STart) on the Internet. I have received permission from the publisher of Antic to make the material available on the Internet for free.

The site currently features the complete text of the first two issues, as well as cover art and memorable ads from the magazine. More material will be added as time permits -- faster if YOU volunteer to help by scanning, HTMLizing, or proofreading.

The site is at http://www.northcoast.com/savetz/antic/dap.html

Your comments, suggestions and help are welcome!

Current contents of the site include:

----- April 1982 - Vol.1 No. 1
Products in Depth - A survey of three word processors
Starting Line - Glossary for the novice
Systems Guide - Memory Map, part one
Pilot - Pilot your Atari
Tape Topics - Some help for cassette owners
In the Public Domain - Chicken
Forth Factory - Multi-tasking in Forth
Assembly Language - A keyboard mask
Editorial
Software Reviews
Useful Tricks - Assembler-editor cartridge
Looking at Books
Kids Korner
GTIA
What's in a Name? ANTIC and Atari
User Notes - how to tell if you have a GTIA chip

----- June 1982 - Vol.1 No. 2
Modems
Dialing For Data
Communications Software
Assembly Language - Move-it
Starting Line - Screen Editing

'Tari Talkers - Speech Synthesis Comparison
Tricks of the Trade - Game Program Techniques
Pilot Your Atari - Large Text
In the Public Domain - Death Star
Systems Guide - Memory Map
Pascal - A First Look
GTIA
Forth Factory
I/O Board
Inside Atari
When the Chips are Down
New Products
Looking At Books
Kids Korner

Cheers,
Kevin Savetz

Would it be possible to software-emulate a SID? To any extent?

Just wondering..

A few years back I bought an Atari 800 with a tape drive, disk drive, and some software. One of my favorite games that I got was an RPG game on disk. I don't remember its name, but I remember many elements it had. It had a first-person view and one-key commands. You would start out by rolling for your character and naming it. You would then go into a shop where you could buy weapons, etc. (including a gun) and put money there for safekeeping. After you leave the store, you start outside the dungeon where you can leave and retire your character. I think there was a mailbox there, too. Some of the things in the dungeon include a troll bridge that you could pass by either giving the trolls a large block of gold or by lighting a match and finding a hidden tunnel (you could fight them, but you would always lose), a room where the walls close that you stop with a metal bar (which gave you the message "HOLY STAR WARS!!!!!"), an arena where you can pick up gold by fighting enemies, a manual-making machine, a ruby so hot you needed gauntlets to pick it up, a giant underground spider web, and a really annoying menu that popped up when you were carrying too much weight (but you couldn't do anything, so it prematurely ended the game). It also had an included sheet of hints coded in something similar to the 1-A, 2-B, 3-C, etc. system. Can anyone help?

My WWW page has been updated! Finally! You must see it!

Sounds like you have a "sticky" 'n' key on your keyboard. The membrane
keyboard on some early 130xe's was notably problematic. You CAN clean
it (the membrane), but its not a job for a novice or the weak of heart.

Some of the places that sell keyboards still have "replacement"
keyboards
for the 130xe. I know you said 800xe, but I assume you meant 130xe ..
or
800xl. The 800xl keys stick for mechanical reasons, rather than from a
membrane keyboard.

Bill

868. video problems with SIO2PC cable

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-28 00:00:00 UTC
From: dmaxwell@greenapple.com
Message-ID: <4tggbf$ffb@news.ee.net>
Source record: 81691

I have built the one chip version of the SIO2PC cable. I used Atari pin 4 (signal ground) as the ground. I have successfully booted the computer using Mydos with both APE and SIO2PC. My 130XE is connected to a color TV using the RF out on channel 2. The video gets a little noisy when I just hook up the interface cable and it REALLY gets lousy when information is travelling over the interface. Does anybody have any suggestions for solving this problem?

Another note regarding the interface. The plans I have seen for the cable for a 74LS00 quad NAND gate. I used a 74HCT00 (a CMOS device) and the interface still worked. The NAND gates are being used as digital inverters. One pin of the three inverters used is left unconnected to anything and the other pin is connected to either the atari or ibm data out. The other pin will usually float high and this allows the gates to operate as inverters. It is a far better idea to tie the open inputs of these gates to +5V as spurious noise can be picked up by the open inputs and cause no end of problems. This is true of any circuit using digital logic. There doesn't seem to be any reason why one couldn't use CMOS or TTL inverters to build the project as well. So one would not be confined to using a NAND gate chip. Incidentally, there is one gate on the 74HCT00 (or 74LS00) that isn't used at all. Does it matter interference wise if the inputs of this gate aren't tied to anything?

A lot of atari stuff came on tape at first too, but I think most was
transferred to disk a long time ago. There might be a few odd things
left on tape in someones closet.

As the first poster said, it seems like a scratch-your-head
no-that-won't-work sort of idea, this transferring the tape to digital
format. But I bet an engineer/techie type person could do that
lickedy-split.

...

yeah, Tramiel really screwed up, but I don't see the point of your post.

but I'm reminded of "Death of an Apple" and "To Kill A Commodore" demos.
The most excellent work I've ever seen in Atari BASIC. Well there might
be something I saw years ago but forgot, but for me these were great.

"Death of an Apple" had some great sound, too. Probably the only time
the Atari ever sounded like a real guitar. More colorful too.
but "To KJill A Commodore" didn't need a character set file, and it had
a lot more gags in it. There was also an ATASCII movie based on
an Atari castle and a Commodore castle at war.

I'm not sure whether the Commodore 64 people ever did anything like
that. The only Commodore demos I've ever seen were intro-style, except
for the occasional porno animation and one entry in the 4K demo contest
called "stickboy", C64 demos seldom tell a story. I do remember a few
though.

Hi atarians!
I think that conecte SID to atari 8bit is very possible... becouse i did it.
In my atari computer i have SID chip. SID is clocking 1Mhz ... and Atari - 1.7
Mhz.. So sound is very.. very... good.. Of course better than Pokey chip..
And i can for example listen very good music in JOYRIDE demo... (in this
demo almost all music are from C-64...)... and another demos by HARD.
(HARD group... very like C-64... sound... code... sometimes gfx... :)

I wrote a clone of this game several years ago but sadly never got round to completing it :-(Basically it is lacking any control logic around the movement of lex, his henchmen, the helicopter etc. What is complete is the screens, movement of clark/superman, subways system etc. If anyone feels like trying to finish it, or seeing how far I got then drop me a line and I can forward my source code and/or a binary.

Pressing BREAK to get an .ATR transferred means that you have a timing problem in the SIO2PC software. Changing the timing is well-documented, and too difficult to explain here, but I've done it successfully after changing from a very slow '286 to a Pentium 100.

879. 8-bit ANSI?

Is the Atari 8-bit capable of viewing ANSI graphics? If so what program enables it to do so?
I'm using an ST now, but I was considering pulling out the old 130XE to see what it would be like using it here.

I have all the Antic and STart issues w/ Antic, and thought about doing this myself. Unfortunately, My friend with a nice flatbed scanner is off to CA visiting a girl he met on IRC. <g> I will be glad to help when he returns. I had thought about digitizing every page until I found out how long that would take, and also how much free HD space I have compared to how much this would take. Also, I need some very good OCR software to come into my possesion, one that does fonts, text placement, line drawing, etc etc.. The package included with his scanner needed alot of help when we tried to ocr the table of contents page of one antic mag.

I would love to see a digital version of every Antic mag online, and catalogued to boot! Both text versions and the actual digitized page, large enough to be readable of course. Any other suggestions? (so far we are dreaming unless someone can donate server space(digitized pages of info get large fast.)

Rick

Reread the first part of the thread, we got server space covered
already...oops.... :)

What image dimensions do you want for the covers and ads? also, if we
were to digitize every page for _reading_, what image dimensions do we
want? All my mags are almost pristine in condition, provided enough
time I could put them all online, but are there other altruistic
individuals with both a scanner and a large collection of Antics (and
Analog!)?

Anyone know of a program that takes a digitized magazine page and
automatically html-izes it? Now that would be cool.

Rick

I am going to start putting a couple hard drive system toghether
with parts I have onhand, then list them here.

Have one ready now.

20mger, enclosed case..case used (clean). Hard drive 20mg Seagate
ST225n. The drive has had little use..dug it out, paid $250.00
for the Mech several years ago has been formatted twice..
KPI-Interface, and cables.

Unit complete ready to turn on and boot up from hard drive.
Price $145.00 shipped..

Working on another unit will post that one when completed.

Bob

I will be doing that. Unfortunatly, the Antic disks didn't start until
1984, but the magazine started in 1982. So there are about 18 issues of
diskless code. :(

Truthfully, I don't think you'll see it in disk format. That cart was a
40K bank select, and while it might be possible to convert it, I think
it would be a job for a real master. I sure would like it though. It is
number one on my list, and I would trade almost anything in my collection
for it!

I actually had it, ordered it direct when it was first released. On the
130XE though, the cart would not hold tight in the socket. You would just
get going and the game would lock up. At the time, I could not afford
to go out and buy a top-loading Atari to play it. Now I have all of them
except for 1400XL and 1450XLD. I had returned it and gotten another one,
but it did the same thing, so I returned it again and got my money back.
If only I'd known...

First Star's "Superman: The Game" was awful, considering it came from Fernando Herrera. Instead of basing it on say, the movie series, it was based on the (if memory serves) "Super Powers" thing D.C. comics was doing at the time. Boring villain, bad gameplay, no classic material of the Superman lore. The title screen stuff was neat enough, but the game was not up to par.

Speaking of which, does anyone know what "Superman III" was all about? Not the movie -- the game Atari supposedly put out. I remember seeing it in the software listings from mail order companies, but never saw the game in the flesh. I only know this was a definite movie tie-in, as Atari provided the computer game graphics and sound for the film.

>even after being used many dozens of times. But other people's
>disks stored in damp or smokey conditions make my disk heads dirty
>and produce the problems you mentioned.

I've seen many disks go bad to where the magnetic coating just comes off like powder. You'll be reading a disk and suddenly you get nothing but errors, then you take out the disk and there's a groove worn in it, and if you hold it up to light, you can almost see through the grooved area. Plus, you have to clean the drive heads before you can use the drive again. I helped a friend rescue his stuff from failing disks by reducing the pressure the "fake head" of the drive (the felt pad) puts against the disk during a diskcopy. Many of the disks didn't make it though.

I imagine it's easier to screen dump from a PC than from in the middle
of an 8-bit game. This would be a good tool to create an extensive
Atari 8-bit games web site I've been thinking about for a long time.

893. Brian's Best Offer Sale #2-New Items Added

Newsgroup: comp.sys.atari.8bit

From: Brian Wiklem <brian_wiklem@interactive.sony.com>
Message-ID: <4tiv7r$90q@news1.sjc.in.sel.sony.com>
Source record: 81706

More stuff to sell, newer items, see the list below.

Thanks to everyone who sent in bids, and a bigger thanks to those
who followed through with payment.

Those who submitted a bid and were notified to send money to secure
your item, and haven't done so, you'll notice your items are back up
for best offers. I may be hesitant to accept another bid from those
who failed to follow through.

Anyhow, here's how it works:

E-mail your best offer, an offer that you think I can't refuse, and
I'll notify you if I choose to accept it. This isn't a once-twice-
sold auction. Things are sold based on best offers, so an item
listed today may be gone tomorrow. I won't spend days and weeks
sorting through the best offers. First best offer, item sold!

Items have a price ($$) that is a mere guideline minimum suggested
bid......

Here's the list:

Atari Items:

Atari Jaguar prototype controller, grey, light blue
buttons, 3 button controller, in box ($10)

Atari XM301 modem, in box, complete ($1)

Centipede, Atari 8-bit, complete in box/cart ($1.50)
Crossbow, Atari 8-bit, cart only, ($2)
Atari Light Pen, 8-Bit, cart software, pen, complete in box ($5)
Atari 2600Jr, complete in box ($5)
Airball, Atari 8-bit cart, complete in box, ($4)
Battlezone, Atari 8-bit cart, complete in box ($4)
Final Legacy, Atari 8-bit cart, complete in box ($4)
Desert Falcon, Atari 8-bit, complete in box ($4)
Crime Buster, Atari 8-bit, complete in box ($4)
Atari 8-bit cart holder, holds 6 carts, grey folder case ($5)
Atari Home Computer binders, case of 12 ($8)
Pole Position II 7800 cart, cart only (.50)

NES
----

3 Stooges, cart, docs, box ($5)
Rescue:Embassy Mission, cart, docs, box ($3)
Dodgeball, cart, box ($3)
Marble Madness, cart only ($5)
720, cart only ($3)
California Games, cart only ($3)
Operation Wolf, cart only ($3)
Nightmare on Elm Street, cart only ($3)
Dragons Lair, cart only ($3)
Bible Adventures, cart only ($3)
Exodus:Journey to Promise Land, cart and docs ($3)

Famicom/Japanese Nintendo

Super Mario 3, complete in box ($2)
Dodgeball, complete in box ($2)
Dragons Lair, complete in box ($1)
McDonalds, complete in box ($3) <not sure if original or HK pirate>
Hook, complete in box, ($2)
Viva Las Vegas, complete in box ($2)

Other Stuff

Dragons Lair, Coleco ADAM cassette, tape only ($1)

Atari 7800 Games ($2) each.: All Brand New in Box

Galaga, Xevious, Winter Games, BallBlazer, Dig Dug, Ms. Pac-Man,
Cracked, Donkey Kong, Donkey Kong Jr., Asteroids.

Atari 2600 Games ($1) ALL BRAND NEW IN BOX:

Gravitar, Space Invaders, Phoenix

Genesis Games (All Brand New In Box)

ESPN Hockey, Football, Baseball, SpeedWorld ($4) each.
No Escape, brand new, complete ($4)
Mickey Mania, brand new, complete ($4)
Mickey Mania, Dracula, Hook, 3 Ninjas Sega CD games ($2) each.

SNES-all brand new in box

ESPN Hockey, ESPN Baseball, complete in box ($4) each.
Skyblazer, complete in box ($4)

Operation Wolf, Golden Axe, complete in box, used AMIGA games ($2) ea.

LYNX power supply, in box ($2)

Please figure at least $3 for priority shipping (more for heavy or large quantity items)

Thanks for reading.

A quick and easy way to add plain text in columns is to use the <pre> tag
(indicating preformatted text). Use the <H> tags for headlines, and
inline graphics, and the pages can look just like the original pages
without much storage overhead.

Way back during the Jurassic period of personal computers, I owned a book on 6502 assembly language. I am now looking to pick up where I left off all those years ago, unfortunatly I don't have the book, any book any more. Does anybody have a good 6502 assembly book that they are willing to part with?

Thanks,

-Mark

I would love to help out on this project. I would be willing to HTML-ize text (as long as it can be scanned in and converted to text with some OCR previously). I think that articles should be done in HTML format, with illustrations as scanned-in pictures. I could even crop images to place in illustrations. Too bad I don't have convenient access to a flatbed color scanner. :(However, I have most Antic and Analog magazines.

This is a really good idea! Way to go!

Maddog, I think I know what you are talking about, years ago I saw an ad for (upcoming) Atari computer games in a Magazine, and it looked like an INCREDIBLE version of the 2600 Superman. The only thing is that I'm not sure if it was for the ST or for the 8-bit! It would be cool to see an improved version of an old game. Kind of like the Atlantis for the 8-bit compared to the 2600.

-Rich.

906. FS: Unusual Hardware (and a little software)

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-30 00:00:00 UTC
From: Deja Vu <dejavu@mail.marble.net>
Message-ID: <19960730171901.aaaa0041M@babyblue.cs.yale.edu>
Source record: 81619

I'm cleaning up my house and I've got some unusual stuff here that you
may be interested in. I've posted this to a few newsgroups where I
think that interested people will see it. Sorry if portions seem
inappropriate. Some of this stuff came from used systems from
auctions and swap meets and some I bought retail.

Any reasonable offers accepted with consideration given to those
who want more than one item. If you want it, go ahead and offer,
email's cheap. I can't give any warranty but I have noted what I've
done to test each item and some info on each.

All of this is from my personal collection and has nothing to do
with the company I work for, I'm just using my work email address.

PC Network and other cards
----

1 DCA Token Ring (ISA/MCA)
Card only, no disks or manuals. I have not tested this yet as I
have not had a chance to get on the BBS and get the drivers and
test program. If you're interested and want to email me the
diagnostic program, I'll test it. DCA's BBS can be reached at
404-740-8428.

1 DCA IRMA3 Convertible (MCA/ISA)
No manual. The diagnostic program for the card
reports this board as OK in all respects. I do not
have the original disks but the system that this
came out of had all(?) the software including E78Plus,
which I assume came with it, which I've zipped and
put on floppy.
DCA's BBS can be reached at 404-740-8428.

1 Wang 210-9454-A WLOC Card (long card)
No manual but information on setup can be found at
http://www.wanguser.co.uk/iwung/iwungwloc.html
I have no diagnostics for this board but I assume
it is ok as everything else with the system worked fine.
No original disks but I have copied the software (there was quite
a bit) that was on the system it came out of to floppy.

1 IBM PC Network Adapter
Full length original ISA card. I have not tested this card at all.
It looks like there are drivers for various os's available around
the net.

1 Data Translation "DT2801 A" Data Aquisition Board
Board only. For Drivers and more info on this card see
http://www.datx.com/
BTW there's all kinds of drivers for this including
linux and windows. I have run the diagnostic program
from the web site on it, and for the tests that are possible
without a test cable, it reports a-ok.

Wang Stuff
---
3 Wang PC-S1-3
Complete, no manuals, some disks. With 2 more without monitors. They
all seem to boot fine.

Amiga Stuff
---
1 520 TV/Composite Adapter
No manuals or box. I bought this new a couple of years ago (right
before I sold my amiga).

1 Digiview Video Digitizer and software
In the box with manuals and software. This has version 3
software. This is the A1000 version but I have a homemade adapter
(that I built with help on the net) so that it works with other
amiga parallel ports.

1 Excellence Word Processor V2
This worked before I sold my 500.

Atari 8-bit stuff
---
1 Atari 800 w/48K BROKEN
Shorted out. Power supply seems good. Has manuals
including Atari basic manuals (lost the cartridge).
May be good for parts.

1 Atari 1050 Dual-Density Disk Drive
No SIO cable. This worked perfectly (BTW this was not connected
when the 800 went up). All manuals and original box. The dos 3 disk
that originally came with this is gone but I will through in a dos
2.5 disk and manual that I bought brand new about a year ago.

Cartridges

1 Star Raiders
Bought this brand new about a year ago - box and manuals included.

1 Jungle Hunt
No box or manuals

1 Music Composer
No box or manuals

1 Atariwriter
No box or manuals

Sorry I had to post via email but the news server here is messed up.

Guess What! I have the Captain Beeble Cart!...It has to be one of my all time favorite A-8bit games! It wasn't a spaceship though, you had a rocket pack that you had to "fire" to keep from hitting anything white, pink or blue. (and of course the bad guys) and get the crystal and bring it back to the "CPU". I am willing to sell it along with a bunch of other great Atari stuff in my attic...Like maybe my heavilly modified 130XE with 384KB of Ram, Standard 25 pin RS-232 interface (Modem anyone?), a non working 65XE (still can't figure this one out!), 2 1050 Drives (Only one Power supply though! =P), and Software galore! like Technicolor Dreams (256 color paint program), Music, Pinball, and Wargame Construction sets and Mucho More... Also have Atari 7800 stuff too!

If interested E-mail me, If not...Oh well, Whenever nostalgia hits me...

Don't do it!
<pre> is great for some things, but here we DON'T CARE about the
original layout, we care about the information itself. If you try to
do multiple columns, it will just make it harder to read -- and
convert to other forms.

> pages of info get large fast.

We're using OCR to make text versions of the pages. Covers and necessary images are being scanned as JPEGs.

We won't be doing graphical scans of all the pages: its a TREMENDOUS waste of disk space (5K for the text of an average article, vs. about 1MB for the "actual digitized pages.") Its the INFORMATION that is important and useful, not the layout. And the information is much more useful and searchable as HTML.

Wow, if the 8-bit version of Atlantis is "better" then the slick 2600
graphics then that wouldbe a very good thing.

I think that games on the 8-bit Atari computers are much better than
their 2600 counter parts. I only have a VCS for games like Yar's Revenge
and the 2600 version of Space Invaders(There's a trick to get near-rapid
fire). But if I can find the 8-bit versions of Asteroids and Super
Breakout, then I would love to trade up. :)

> it be worth my effort to put my BBS back online - in Carina
> format?

I don't see why not... You know there is a group of ATARI 8-BIT BBS's around the world that are now Networking together through the Internet Mailing System (It's called 'The Independant Atari 8-Bit Network') - It hasn't been going for all that long (a couple of months or so), but the early indications are very encouraging... - In my opinion our 8-bit Atari BBS's still have a place in the BBS society (no matter what anyone else says) and with 8-bit programmers out there writing programs so we can link up in todays information hi-way there is no stopping us...

I'm curious as well. When I first heard of FTE, I figured Mike was just an old Atari enthusiast hacking together hardware in his spare time and selling it for a so-so profit. A legimitate business, but nothing to pull in an income above the poverty line.

But after reading his update newsletter that was mailed late last year, I think he's totally bonkers! He mentioned purchasing over $50,000 worth of equipment and just scraping by on shareware fees from Sparta DOS. I certainly think that lunatics are a good thing in the Atari world and I'm still rooting for Mike, but, quite possibly, he's having a bit of trouble right now.

From: John Veness <john@drl.ox.ac.uk>
Message-ID: <31FFC045.2BA4@drl.ox.ac.uk>
Source record: 81631

Dear all,

Thanks for all the replies to my question as to whether Lemmings was available for the Atari. I realised that it was a long shot, but it *is* available for the C64, Spectrum, Amstrad CPC, which are of a similar generation to the Atari, as well as later 8-bit consoles (GG, GB, SMS, NES), so I thought it *might* be possible.

Thanks also to Kevin Steinhaus <kevins@hutchtel.net> for sending me a LEMMINGS.COM which is certainly *something*. It looks like a demo, with a scrolly text along the top (saying "ARGS-LEMMINGS - IDEE UND GRAFIX: BLACK PANTHER - MUSIK: EISBAR CORP. - PROGRAMM: JOJO JUNGLE SOFT") and some largeish Lemmings falling down the screen. That seems to be it, no playable game or anything.

It looks like the answer is that there is no official Lemmings for the Atari. Thank you for your help!

John

920. Re: reading 8-bit tapes with sampler (was "cassette->atr")

Newsgroup: comp.sys.atari.8bit
Date: 1996-07-31 00:00:00 UTC
From: ellman@xs4all.nl
Message-ID: <4tnnsm$imd@news.xs4all.nl>
Source record: 81633

Once in the Netherlands, there was a program on Dutch radio about programming BASIC for the Atari 8 bits. Every so often, it would broadcast the sounds made by the tape as it was played, and the listeners were supposed to record these sounds and try to load the programs onto their computers. This never seemed to work with me, but if that does work, then it should be theoretically be possible to sample the tapes and convert them to files. If radio-quality is supposed to be good enough for sampling Atari tapes, then it must be possible on modern soundcards that can sample at CD quality.

I also vaguely remember that tapes had two tracks per side. One was used for Audio, and the other was used by the Atari for recording data on tapes.
I also know that some of my tapes were recorded onto tapes that were previously used for recording music, and you could still hear the old music on the tape while it was loading.

You allways get a 640*400 image on the clipboard when you grab a 320*200
screen from Windows95 (don't ask me why). All you need is a program that
can reduce the screen without making any distortions. One such program is
LView Pro, available from
ftp://ftp.std.com/ftp/vendors/mmedia/lview/lviewpro.zip
(There is a homepage for LView Pro on http://www.lview/.com)
Before you run PCXF, you should start Lview pro with no picture and then run
PCXF. When you grab the image from PCXF with ALT+PRINTSCRN, you switch over to
Lview Pro using ALT+TAB, and when you are there, use SHIFT+INSERT (or use the
paste option on Lview's Edit menu), and you will end up with a 640*400 version
of your image. To get it to whatever size you want, you must resize the image
(use CTRL+R or Resize on the Edit Menu). I reccomend that for some graphics
modes(such as modes 0,1,8,9,10,11,14,15 and that mode who'se name I've
forgotten that is a bit like mode 0 but has 8*10 pixel characters) 320*200 is
a good size, and for others, keep dividing the resolution by 2 until you start
to lose some information.

To cut down on the file size if you are using Graphics 8 or any other
monochrome graphics mode, select Colour Depth from the Retouch menu, and
select Black and White. This is so that any unused colours are ignored
and the number of bitplanes in the image is reduced to just those that are
necessary. Beware when doing this for modes with more than 2 colours, as
LView insists on adding the 16 colours of the Windows palette to your image,
and you must add 16 to the number of colours in your original image, otherwise,
your image will be dithered to Window's palette.

I hope this helps.

AE.

I have great deals on the following hardware

12 256k 16pin dip chips for only $1.50 each

4 1meg 32pin simms only $9 each these are very hard to get

5 MFM controllers only $4.50 each

I am just starting this business and I need a good name so if you send me five names I give you $1 off your next order. Please no stupid names.

There's also a great program called "HyperSnap" for Win95 ... works
great for
capturing screen shots ... can't remember where I got it; maybe PC
Mag's FTP
site ... use a search engine to find it if this is a bum steer.

I never played the Atari version of The City, but have tried the IBM PC EGA version of it.

>If it had music, perhaps it would be ok. But it doesn't appear to have
>music. It makes ugly noises through the PC speaker though...

I *believe* I read that the IBM version of The City does not have music. It has sounds when you're walking through a door and what-not but no music in places like The Dungeon had on the Atari.

>Also I have never quite made Xformer or XL-it run the AR ATR's quite
>right. Xl-it is still slow and I couldn't get the on-the-fly
>disk-image change to work. (But the sound is definitely getting there,
>nice job Markus). And Xformer just mucks up royally with half-baked
>sound and it won't even run it. (But Xformer is fast)

I have successfully got The Dungeon to work under XL-it! but am having quite some trouble getting The City to run. Still working on it. Haven't tried Xformer. I never tried a previous version of XL-it! (i.e. before 0.14) but as I understand it, the sound was added in this version so given that info, it's quite commendable. As far as speed goes, it's somewhat slow on my Pentium-60 but not too much slower than it was on the Atari 800, especially when you take floppy disk swapping into account on the Atari.

>Anyone else have luck with this?

Am still in pursuit of getting the City to work. Never played it (only tested the IBM version to get it to work)!

Source record: 81645

Hello Atari Enthusiast,

I dug my old system out of the back-room and plugged er all in and got her up and running. Being inspired by this group mainly. But, I know that my Atari days are over. I played some old games, browsed through a few basic programs that I labored over, wished my Mad Spy vs. Spy disk would load and printed out some dreary sort of pre high-school ramblings on life to keep like a sod. But all nostalgia considered I decided that to keep this machine was silly. I have only used it a few times in the last 5 or 6 years.

So here goes the list, I would like to sell this stuff as a Unit if possible but I will part it out, (it may be easiest that way) at any rate I will except offers and criticism on prices. You may have a better understanding then I do about how much this is worth. Shipping is not included in these prices, once we have a deal I will go to the Post Office and let you know how much to ship, COD.

Listing

Atari 600xl - $25.00
(there is some modification, self installed, ie. a new chip and some pins soldered together on another that bring the machine up to a 64k RAM, same as a 800xl I think, keyboard sticks a little but I feel that all the keys can be restored.)

XDM 121 Printer - $20.00
(still works great, letter quality printer, looks like your stuff went through a typewriter, old printer cartridge ribbon but printer works great)

1050 disk drive - $10.00
(The drive is a little sketchy, It works if you fool with it long enough, but you have to keep taking the lid off and cleaning the "eye" I think some disks are really dirty, and the little pad above the eye is wearing out, again. Missing screws that hold on lid.)

Standard tape drive - $10.00
(Hey what can I say? If you have used em most likely you have cussed em! This one works fine but has been cussed at.)

Flight Simulater Program Disks and Manuals $10

Computes Book of Mapping the Atari - $3.00

Various Books ask me for a list or tell me what you need $negotiable

(I might be persuaded to throw this and another huge pile of books programs disks and software and all in with everything else, it will raise the shipping cost though. Write me for a more complete list.)

All equipment will come with everything needed to make it work and hook up to your Atari or mine. Please respond via Email as well as to this list. Thanks for keeping the Atari alive and well, its a part of my life that I remember fondly. Thanks also for making it through this very long post.

I had a "Superman" game for the Atari a LONNNNG time back... a single-sided, single-density "boot disk," which showed a nice graphic of Superman, then a nice graphic of his opponent (Darkseid), then an animation of Superman flying in from the background to the foreground of the screen. Gameplay is less memorable -- in fact, I'm having a hard time remembering it at all. As I recall, you flew Superman over a grid of Metropolis' city blocks and searched out / fought evildoers and/or Darkseid... But I never played it much. Should still be lying around here somewhere...

Hello!

very sorry to bother you. I was wondering if someone could point me towards some good NET references on how to program on ther Atari 8-bit computer. Be in in BASIC, or Macine, Game or utility I am interested in learning how to code on the Atari, and the specifics involved with it. I am currently knowelgable of 80x86 C, ASM and of course basic. If someone could give me some starying points/books/code I would be greatly appreciative. Thanks again.

935. Uploaded: Atari800-0.5.0.tar.gz for UNIX and AMIGA

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-01 00:00:00 UTC
From: David Firth <david@signus.demon.co.uk>
Message-ID: <rcxKqLAgwPAyEwFE@signus.demon.co.uk>
Source record: 81570
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

I've just uploaded Atari800-0.5.0.tar.gz onto my web page
located at:-

http://www.signus.demon.co.uk/david/atari/atari.html

You can also obtain an Amiga binary version at the same location. It
requires an A1200. The Amiga version is currently 0.4.5. If you've
got a C compiler and the resources you should be able compile 0.5.0
yourself - Hopefully I'll be able to upload a new binary shortly.

Changes in 0.5.0

- Simplified interface to CPU module.
- DIRECT_VIDEO now works with PMG collision detection. This option
increases performance by about 28% but can result in different colours
being displayed. This is because this option relies on COLPF0, COLPF1,
COLPF2, COLPF3 and COLBK all having different values, hence the
emulator sometimes modifies the colours :-(This option can be enabled
during the configuration phase.
- Correction to ANTIC Mode 5 Vertical Scrolling.
- Correction to PMG DMA Code - Demon Attack now works OK.
- Added code to limit the emulator to 50fps - this will not have any
effect if your machine can't run the emulator greater than 50fps.
F10 in X11, XVIEW, MOTIF and SVGALIB versions toggles the limit
on/off. When the limit is off the emulator will go as fast as it can.
- Path to directory containing the OS ROM images is now defined during
the configuration phase (Declaration of ATARI_LIBRARY has been removed
from the Makefile).
- Correction to handling of PMG DMA - Pitfall II now Works.
- The unused bits in PMBASE are now ignored correcting errors in Atari
Chess and Frogger.

Bye

937. Bits and Pieces

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-01 00:00:00 UTC
From: David Firth <david@signus.demon.co.uk>
Message-ID: <wcJMqFAAoPAyEwHw@signus.demon.co.uk>
Source record: 81572

I've just uploaded my life times Atari 8bit work (well some of it) onto
my WEB page located at:-

http://www.signus.demon.co.uk/david/atari/atari.html

Atari800-0.5.0.tar.gz
Source code for an Atari 800, 800XL, 130XE and 5200 Emulator for
UNIX, VMS and AMIGA.

Atari800-0.4.5-amiga-bin.lzh
Amiga Binary for the above emulator.

Superman
Disk image containing an unfinished version of the VCS Superman
for the Atari 800 series. Includes GIF.

Alien Encounter
Disk image containing a crap game (well by todays standards) I
wrote in 1984/85. Sort of a cross between space invaders and
centipede. Includes GIF.

UltraSpeed Copier 2.3
Disk copier that uses the US Doubler Ultra Speed I/O. Copies
Single, Duel and Double density disks. Can copy disks formatted
without special format using Ultra Speed. Includes GIF.

1050 Menu 2.2
Multiboot program written for the 1050 drive. Yes I know a
lot of you prefer DOS files, but I've uploaded it for those
that don't :-) Includes GIF.

Test Computer Language
A small compiler I wrote in 1985/86 and used to write Enigmatix!
published by Page 6. Compiles programs to DOS binary files or
direct to a BOOT disk. Also contains a RUN mode which compiles
and RUNs the program in memory. The language is block structured
and supports procedures, functions, while loop, repeat until
loops, if statements etc. The compiled code can be used in
VBI and DLI Interrupts. WEB page contains semi-finished HTML
User Guide (HTML not index correctly yet!) and a few example
programs (Breakout, 8way scrolling, Interrupt driven music).
Hopefully its not too low level for the remaining 8bit die
hards ;-) This is probably not what you want if you've only
used Atari BASIC. Includes GIF.

See http://www.signus.demon.co.uk/david/atari/atari.html

>*.warez.* is 2 days!!!!!

OK, that's exactly 2 explicit replies. I am currently working with another
person to get the proposal properly assembled; it will be announced in all of
the comp.sys.atari* groups when the RFD (Request For Discussion) is posted, and
again when the CFV (Call For Votes) comes around. You MUST subscribe to
news.groups to particiapte in the discussions - something that was /not/ told us
when the RFD to remove our previous binaries group was opened. This is a
nuisance, but you'll only have to carry the group for a month or so, as a 21-day
discussion period is required, and the CFV can take palce between 21 and 30 days
after posting.

If anyone else has any comments, PLEASE make them now, either here or in email.

What's the URL?

I did get in touch with the Webmaster at http://www.filez.com, and he's adding an "Atari" button to the search engine there. Very nice guy, I sent him the most common file extensions for Atari archives, and Hallvard's list of Atari ftp sites.

>
> That's Newberry Township in York County, PA
> My homepage is at http://www.microserve.net/~johnh
>

I saw his name mentioned on the McAfee web page, so he may be working for
them. They has a number of his files online, and since their site is
primarily geared towards their product line, I figured it might be a
logical conclusion. I have never found an address listing.

944. Internet communications

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-01 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <4tp3t3$kq3@madeline.INS.CWRU.Edu>
Source record: 81648

(Honest, I looked at 'misc' groups, 'alt.internet' and didn't find anything like the great answers we get here on csa8, so I apologize for the 'off topic'ness of this post, but this is the group I read and I can't find a more likely place to get some 'intelligent' answers.)
The two wire line concept is, oh, about 150 years old. It has a maximum transmission rate measured in khz. The internet is based on communications measured in mega baud, and can operate, I believe in at least megahz transmission rates. With the use of fiber optic lines, or even rf co-axial lines, communications could be considerably more advanced than with the limits of a two wire line. Such things as svga quality 'TV', very high resolution visual 'telephones', mega baud computer communications, all would be possible.
All but the local connections in modern phone equipment is microwave, fiber optic, and other 'fast' communications. All that is needed is to hook up our rf or fiber optic cable TV to these 'long distance' networks and we could have the vastly improved communications.
The internet was developed and built using public funds for university and military for reliable data communications. Our government has handed over, free I think, this publicly funded developed system to regional phone companies. That is sort of like putting the fox in charge of the hen house. Regional phone companies have a vested interest in the two wire communications system they have used for over 100 years.
The above are my opinions, as I am not confident of their verity. If anyone wishes to add to, or correct, any or all of the above, that's why I'm posting this.

945. My new Atari web page is finally up.

Newsgroup: comp.sys.atari.8bit

Please take a look at

http://www.troas.demon.co.uk/atari/atari.html

Some stuff on it now, and a good set of links.
More to come.

Tell me what you think.

946. Oasis

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-01 00:00:00 UTC
From: sunlord@zot.io.org
Message-ID: <4tpbi4$miv@zot.io.org>
Source record: 81650

I have seen a little bit about this so I was wondering...

Is there anyone out there that knows who owns the rights to the Oasis BBS program and how I couldget in contact with them. Last I recall it was in Toronto (as many BBS's sprug up here, all of them buying it from some guy in Tonorto). If you could help me out I would be appreciative.

Keep sending those updates! They are appreciated!

================================================================================
= Cartridge List for the Classic Atari 800/XL/XE Computers =
================================================================================
= Rev. 2.1 August 1st, 1996 =
= =
= Author: Andrew Krieg krieg@execpc.com =
= =
= This list is also available via the WWW at: =
= http://www.cs.uwm.edu/public/krieg/fun.html =
================================================================================
= Welcome to the Classic Atari Computers Cartridge List! This list is based =
= on a list originally started by Kevin Chase. Many personalized versions of =
= Kevin's list started to pop-up, so I have attempted to consolidate every =
= bit of data I could find into one list. I hope you find it useful! =
================================================================================
= Key =
= ------ =
= NR = Never released =
= ?xx = Year of release not known for certain =
= kbo = Keyboard overlay was included with cartridge =
= <none> = No catalog # on cartridge or manual, box may have had a # on it =
= [O] = Checklist for cartridge ownership =
= [M] = Checklist for manual ownership =
= [B] = Checklist for original box ownership =
= =
= To reuse the checklists, use your favorite editor and replace all of the =
= string patterns "[x]" with "[ ]". You have to calculate your own ownership =
= and ratio values as well. =
================================================================================
= The rarity ratings are still undergoing fine tuning. I would appreciate =
= any feedback on them. It should be noted that common carts for the Atari =
= computers are harder to find than common 2600 carts. They would probably =
= rank as uncommon or rare on the VGR 2600 list. =
= =
= Rarity =
= ------ =
= C Common These carts can be found fairly easily at thrift =
= stores, in sale posts on the 'Net, or in Atari =
= computer vendor catalogs (yes there still are some =
= vendors!). =
= U Uncommon A little harder to find, but they pop up on the 'Net =
```

```
= infrequently. =
= R Rare Very elusive to find carts. Some vendors still have =
= them in stock, but they are generally more expensive. =
= ER Extremely These are very, very hard to find. They usually have =
= Rare had a very low production run or are prototypes. =
= Consider yourself very lucky to come across one! =
================================================================================
= Total = 339 carts Own = 132 carts Ratio = 39% =
================================================================================

Sorry, I don't know who was actually being quoted here...

However, since we're talking about the Web, why should it be a require-
ment that ALL the Antic Online resources (e.g. pages) be online at ONE
site? Sure, that'd be easiest to manage, but... if worse comes to worst,
there's absolutely NOTHING to stop us from parceling the material out to
a whole BUNCH of people at MANY locations, spreading out the load to a
manageable amount for each.

Just thought I'd mention that, since nobody ever actually seems to think
of this approach. :-)

Chris

>
>AE.
>
Actually, saving the files to disk isn't the big problem with the
cassette versions of programs, it's running them once they've been
saved to disk. They still look for the tape I/O. There is some internal
conversion that has to be done to make them runnable. BASIC programs on
tape are no big deal as they are easily reconfigured for disk, but ML
programs must be disassembled, edited, reassembled tested, before they
can be run.
Once you have a tape file loaded into memory, it can be saved to
disk. ML programs are sometimes difficult to do this as these sometimes
don't like having DOS in memory at the same time.

What happened to Michael Current's effort to get the same thing going?
In fact what happened to Michael Current? Anyway, if he is still around
maybe he already has some of the issues scanned. I had volunteered to
help but never got around to it. I do have some of the later issues
of Antic but I gave most of them away at the Atari Mistfest last month.

It is my understanding that it was available both on cartridge and on
disk. I have never found it in either format and I've ask a lot.
someone here a year or two ago sent me email that they had it in both
formats but didn't want to advertize the fact by posting information
here. I believe it was on an enhanced disk and so took one of the
later disk drives to use but I believe it could be played on a 64K
machine. It didn't take a 130XE.

Miner 2049'er is still one of my all time favorites.

I am trying to find good "Megademos" that will run on my 8-bitter (130XE). I found some at the umich site but judging from the screwed up video and the German messages scrolling by I would say they were coded for PAL Ataris. I could occaisonally see the effect they were aiming for but the scrollers flickered and some of the text was unreadable. They would always lock up at some point. Anyone know where to find the NTSC stuff?

966. Spartados X reboot

I know for sure that USGold released it on.... TAPE! all those years ago.
However, that was in the U.K.

Thus, there must be a disk image of it floating around - heck, I may well
have it amongst my stuff - best take a loook.

983. 8 bit Amstrad / Atari stuff for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-02 00:00:00 UTC
From: Richard Smith <ros@mfltd.co.uk>
Message-ID: <32022E83.42F4@mfltd.co.uk>
Source record: 81596
Cross-posted to: solent.forsale,uk.adverts.computer,comp.sys.amstrad.8bit,comp.sys.atari.8bit

I have some 8 bit Amstrad / Atari stuff for sale; great for nostalgia though probably very little else (?) This came to me originally from the organisers of a Children's group who want to sell it and get more modern consoles etc for the kids to play with. I've had a look at it all and everything appears to be ok and working (no guarantees provided, however). I am in Newbury, Berkshire area - buyer either collects, arranges collection or pays for delivery at cost.

There are several lots, asking prices are in pounds sterling. Offering the asking price secures the lot if still available. Any offers below the asking price will be held and if a lot isn't sold by 31 August I'll take the best offer. Anything I still can't shift is likely to be taken to the tip. (Feel free to nominate a charity who might want anything instead in this case - but remember how I came by it all!)

Please send email to me if anything is of interest - ros@mfltd.co.uk

---

Lot 1 - Amstrad CPC464, internal tape, colour monitor, manual, demo tape. GBP20

Lot 2 - As lot 1 but caps lock key top is missing. GBP18

Lot 3 - Amstrad CPC464, internal tape, mono monitor, MP1 module for connection to television set. GBP12.

Lot 4 - Amstrad CPC464, internal tape, mono monitor. GBP10

Lot 5 - Amstrad DMP2160 dot matrix printer, tractor/friction drive, manual, cable, software: Mini Office II, Pitman Typing Tutor, Easy Amsword. Ribbon appears to have dried out - needs replacing. GBP15

Lot 6 - Big bag of Amstrad CPC software (tape). 29 freebies/cover tapes, 14 commercial tapes without boxes or instructions. 77 boxed commercial games with instructions. GBP8

Lot 7 - Atari 800XL, tape deck, PSU. No manual or software. GBP10

Lot 8 - Seiko DPU411 80 column thermal printer, serial and parallel interfaces. GBP5

David, there is a whole world of 8-bit users and programmers out there; most of them are hanging out in comp.sys.atari.8bit, and I have a pointer to a couple of good 8-bt references at http://www.3rdplanet.com/~starship/atari.htm - you may have some problems getting in, US West (the local phone company) has major trunk line problems right now, and I don't know who owns the T-1 trunk to the Sprintlink backbone. If you can't get it today, keep trying - they promised to have it fixed before Tuesday (that's right, 5 days or more to fix major problems - that's why many people call them "US Worst").

If your sysadmins are running Novell (a possibility), tell them to run Salvage and try to undelete your archive. Most NOSes have some form of undelete for the very reason you cite - overzealous admins.

Seems like everyone has different experiences with Windows '95. I waited a year to install it because I was having some hardware problems with my new Pentium during that year. When I was convinced that they were straightened out, I installed it. It worked very well for me until I decided to install McAfee Antivirus. The install was flakey, and it left the machine not being able to restart. Whatever you selected from the restart menu would shut the computer down. I uninstalled McAfee and let their tech people know about it. They had never experienced the problem and are "researching" it. Until they get back to me, I'm not doing that again!

Looks like nothing is as consistent as the 8-bit!

Meantime, if the Rainbow 95 is here, I'll certainly take a look at it.

Don't believe the anti-hype. It's not THAT bad. Slow and bloated,
yes, but the extra functionality is valuable enough that I personally
wouldn't go back to 3.11.

Source record: 81604

Well, I downloaded and unzipped Rainbow95 ... I put the
required Atari OSes in its folder (from PC XFORMER) and tried to boot
it. It doesn't do anything in 400 mode ... I get a brief "basic blue"
screen in the 800xl mode, but then it goes into self test mode. They
talk about booting the demo disk, but don't say how. Are you supposed
to have Atari hardware attached to the PC to do this? The arrow keys
don't (apparently) work. I think some of the F# keys do some of the
Select/Start/Option functions, but I don't know which does what.

If this was supposed to "show off" Rainbow95, it doesn't do a very good
job. I couldn't figure it out from the little "readme" file that came
with it.

A good Atari 8bit emmulator is scarcer than hen's teeth .. or the
"Holy Grail" ...

Bill

Hmm, not much I can edit out of that. Oh, well.

If you use the service and like it, send 'em feedback. I think, like most
similar web sites, they are supported by advertising, so any feedback they get
will help them sell the site to more advertisers, allowing them to buy faster
servers and sell more ads... You know how it works. <G>

I got it and tried it - once setup it has the distinction of being the easiest emulator yet. I'm looking forward to the full version. I havn't tried to load another disk yet - only thier demo disk - speed was better than I expected.

Note that it is just a demo version so far.

As for Win95, I've been using it since release (it did wonders for my 10meg 386sx) as an upgrade and also as a standalone O.S. on a new system. I have not had any problems with it and once familiar with it's layout, it's much easier than program manager ever was to use.

You need to use the 5 pin DIN connector. The Atari had Chrom, Lum,
Composite and Audio outputs from that jack! Since you have a
Commodore 1804, you can use the seperate Chrom and Lum connectors for
a better picture. Now, I don't remember if there was an issue with
the 800XL, but my 800 worked just fine with my 1702. I remember there
being a modification to the newer Ataris that was mentioned in the
various computer mags. Now that Antic is online, maybe you can look
it up.

I remember reading in the AMS box that the author had made a 32 voice
AMS song using multi-track recording and even offered to send a tape
of it. Does anyone have a copy of this? I'd live to make a WAV of
it!

Yours truly,

I just finished updating my Atari bookmarks page at
http://www.3rdplanet.com/~starship/atari.htm - the changes are mostly to make it
easier to get around on the pages, with some cosmetic mods and a bunch of new
links (including a new section, "References," for helping you find out how to do
STuff).

There are sections for both 8-bit and TOS-based systems. Pop in and take a
look sometime!

: >
: >Atari is truly dead.
: >
: >:^(

In all fairness to Atari, a complete and just epitaph may never be
written, forever forgotten by the legion of IBM,Microsoft,Nintendo,etc
supporters. However, I will write one:

Atari

Atari was a very bold and ingenious company who provided inexpensive
video games to the masses. The innovation and bold strides made daily
reflected not only the work being done, but the people behind it. Without
Atari growing up, millions of kids would never have known the pleasures
of battling out a game of Combat or Warlords by two people in front of a
television screen.

Is was because of Atari, that milliosns upon milliosns of people grew to
love, cherish, and respect video games as a viable entertainment option.

To all those who buried Atari with their insentitive remarks in years
past, we'll now their gone. And you can no longer trash them. They're
done, but not forgotten.

So, it would be best if we all focused on what Atari did _right_, not
what they did wrong. Everybody screws up now and again. But once in a
great while, they succeed. This is what Atari was. And will forever be.

Regards,

Paul Allen Panks

: Oops, JTS is remaining on the AMEX, not the NYSE. CNNfn was in error (not
: the first time either, sheesh they have a lot of errors).

Message-ID: <4tui3m$hno@crl13.crl.com>
Source record: 81612

Cyrus Malek (cyrus@dvorak.amd.com) wrote:

: Are you talking about Aztec Adventure?

I don't think so. It was called simply "Aztec", and the publisher was Datasoft. It was basically a platform game with many levels. The object was to grab the idol hidden deep within and make your way back out. You went in with little defense but as you searched chests you'd find dynamite, a machete, a gun and bullets to fight your way through scorpions, spiders, snakes, tigers, dinosaurs, and aztec warriors. Lots of traps too. I liked to drop dynamite on the dinosaurs :) Lotsa fun and very challenging; every game was different.

Oh dear, sorry to hear that. Please read the README carefully. Rename the
ROMs as suggested and start up again. To insert the disk simply move your
mouse pointer to the D1: menu item, choose 'Insert disk' and then select
the Demo.dsk file. Rainbow will reboot and present you with a menu
of demos.

> If this was supposed to "show off" Rainbow95, it doesn't do a very good

1007. Atari 8bit Emulators Critique

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-03 00:00:00 UTC
From: daniel11@appstate.campus.mci.net
Message-ID: <4u080q$q1@news.campus.mci.net>
Source record: 81524

Xformer: by the insipid poster and decent programmer Darek Mihocka,
Xformer is the most complete 8bit emulator and the fastest. It's
currently the best out there. It's flaws: mediocre sound

emulation, and there is room for work in compatibility.

XL-it: by Markus Gietzen. XL-it is a highly functional emulator still

still in the beta stages. The author has apparently devoted a
lot of effort to getting the sound right. Compatibility is already
the best of the emulators. Its flaws: It's sssllllooowww.

Rainbow: I just tried the preview. Very incomplete product at this
point. Plays in a window. TERRIFIC user interface, all
point-and-click. Apparently no sound. Slower than Xformer
but has options to adjust the frame rates. Flaws: I could
only get the demo to run the included demo, it allegedly takes
90k disk images. Looks like the upcoming demo will be a
highly crippled uptight shareware version.

Daniel

1008. Re: Rainbow 95

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-03 00:00:00 UTC
From: Bill Somrak <cooncat@ncweb.com>
Message-ID: <3203BB3C.5272@ncweb.com>
Source record: 81525

Hi All,

Well, I was WRONG, and I admit it.

When I first checked out Rainbow95, I had only done a very
perfunctory scan of the README file. I had the opportunity to print out
the entire file, and use it to check out the Rainbow95 program.

It DOES work, albeit a bit slowly. The demo disk shows off some of the
more popular Atari Demos which were shown at various computer shows
during Atari's heyday.

I haven't been able to try any games with it yet, as all my XFD and
ATR files are either Spartados or MyDos dbl dens. files. Neither are
supported at this time.

The bottom line is, this package shows some promise. I hope that
Chris Lam pursues this effort and brings it around. Despite my
erroneous remarks to this group earlier, he e-mailed me and set me on
the right path (and did so in a courteous manner ... how refreshing
after
having dealt with a certain author of PC Xformer, whose Phillistinian
boorish behavior has left an indelible black mark on all that he
touches).

If you have Win95, I suggest you check out the Rainbow95 emmulator.

Bill

I'd like to add my 2 cents to this. Anyone need only to look around
their office or home and will probably find some item that is connected
to Atari in some way. Atari in it's hey days churned out some of the
most innovative ideology, employees and influenced a generation of young
people.
You can read "Virtual Reality" by Rheingold (sp?). The book contains
numerous citation of Atari and how they influenced today's industry.

There is a pd utility called XON ... I use it all the time on my BBS.
Often the Sparta utilities come packaged together in several large ARC
files ... I think I have two or three on my board. 614 761 1891.

c> don't (apparently) work. I think some of the F# keys do some of the
c> Select/Start/Option functions, but I don't know which does what.

That's why it has the usual Win95 (aka Mac84) pulldown menus - pull down D1:
and "insert" a disk. I tried several, and some that would not run with XLit!
worked with Rainbow.

c> If this was supposed to "show off" Rainbow95, it doesn't do a very good
c> job. I couldn't figure it out from the little "readme" file that came
c> with it.

I imagine the author believed that anyone who could get Win95 to work knows
how to use the menus.

c> A good Atari 8bit emmulator is scarcer than hen's teeth .. or the
c> "Holy Grail" ...

Well, Xformer is still around and runs. XLit! is here, and gets better with
every change (and has good, high-quality sound support); and Rainbow95 looks
like it will become a pretty darn good product, so I see no reason to
complain.

Got it! The only undesirable thing is that I did some maintenance of my
own on the contents. I converted all the .DCM disk images to .ATR, and
reorganized things into subdirectories (e.g. all files beginning with 'a'
go in a folder named 'a'). I also recompressed it in Macintosh Stuffit
format, but that's easy enough to reverse. Let me know where you need it
uploaded and I'll do it.

1024. Atari BBS List: 96-08-03 Update

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-04 00:00:00 UTC
From: oscar@primenet.com
Message-ID: <MPLANET.32044a88oscar9896ca@client1.news.psi.net>
Source record: 81537

Thanks to all of you who have provided updates thus far - keep
them coming! I've had a couple of requests to order this list
by telephone area code. Personally, I think the list is short
enough that looking it over is not a hassle, and it makes more
sense to keep it alphabetized by BBS name. If the list gets
any longer, I'll reconsider my position. Feel free to let me
know if you think I'm wrong about this.

New/modified entries will have a "status date" of "96-08-03"

I originally wanted to keep this list as concise as possible,
but I've since decided to allow for multiple lines of notes.
Anyway, if you want to add more commentary on a particular
BBS, let me know and I'll add it.

Also, I'm wondering if keeping the list in 40-columns
is worthwhile. Any opinions?

--

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
"Type" indicates the type of hardware used to run the board.
"Status" is whether the board was up or not the last time it was checked.
"Status Date" tells you when the entry was last updated.
--
There can be one or more lines of "Notes".

From: eplicon@aol.com
Message-ID: <4u2j5r$1ns@newsbf02.news.aol.com>
Source record: 81538

"Aztec" is one of the true classics -- considering it came out in 1982, the graphics and gameplay are quite good. I always loved trying to kill the creatures with the machete, because it was often fatal (when you lunged, if you were a step off, touching the creatures would wipe you out <g>).

"You did not make it."

1026. Re: Rainbow 95 is here!

-with it.

Actually, I have been beta testing the Rainbow 95 for about a month
now, and it runs A LOT more software than either xformer or xlit.
Unfortunately, no sound as of yet, but the p/m collisions and
different antic modes work perfectly.
You need to rename the opsys files that xformer and xlit it uses,
OP_400 OP_SYSXL OP_BASIC
Load an ATR image with "D"isk, then choose Reboot from the leftmost
menu. Make sure your pallette is 256 colors. It should reboot the
computer and load that image. It right now does not support any images
other than 92176 byte ATR's, so any mega images or shorter images will
not work.
I tried about half of the archive programs in it, and most worked
fine. There are still problems with character graphics (like in
Jumpman) but these are caused by slow frame refresh due to the high
system requirements of the emulator, not by the emulator itself. If
you had a 200MHZ pentium it would probably be fine. :)

1027. Re: Atari 8bit Emulators Critique

Newsgroup: comp.sys.atari.8bit

From: treestrong@aol.com
Message-ID: <4u2742$r5o@newsbf02.news.aol.com>
Source record: 81540

you are joking, arent you ??
Xformer is a piece of shit. Darek is the worst coder i have seen.
Incombatibity everywhere. Ok its fast, but no games are running.
Xl-it is good work and is still being developped. Music is soso, not good
but promising.
Rainbow 95 PREVIEW seems to be the most promising ATARI XL emu.
look at rainbow for MAC, and you will see....
Why are you critizising the user interface or arent you a friend of
WIN95???
Better than Xformer or XL-it.

Michael

1030. Printing With Super Score On A 1040XL

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-04 00:00:00 UTC
From: senright@ix.netcom.com
Message-ID: <3204f45b.1133493@nntp.ix.netcom.com>
Source record: 81543

I have a friend with an Atari 1040 XL, or a 1040 of some sort. He writes beautiful music. He has tried to print music created with Super Score by Sonus, or is it Sorus, but it prints rather strange. For example, when the word "with" is printed the "th" is printed directed over the "wi". He has tried printing with an FX or LX-80 9pin printer.

You suggestions or ideas are greatly appreicated.

1031. Super Score And Printing

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-04 00:00:00 UTC
From: senright@ix.netcom.com
Message-ID: <3204f6c0.1746839@nntp.ix.netcom.com>
Source record: 81544

I have a friend who writes music. Amongst the tools that he uses, he has Super Score, by Sonus or is it Sorus. He uses this on an Atari 1040. When he prints, it prints very strangly. For example, the word "WITH" might print with the "TH" printing right over (on top of) the "WI".

Your suggestions and ideas are appreciated.

1032. CX85 Keypad Forsale

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-04 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4u2vg9$7i8@madeline.INS.CWRU.Edu>
Source record: 81545

I found a CX85 keypad lurking under a percom drive in my big box
of stuff. I don't really need it, so any offer +$3 to send it will
get it to your door.

As I recall it requires a handler of some sort, I actually used it once
for inputting data from an antic mag, pretty cool :)

I have already added a window to display the directory of
SpartaDos/MyDOS/Atari DOS images as they are browsed in
the file selector. Seems to be a great feature, it helped
me finally get to check out all the images on the Pooldisk :)

Any other ideas?

Message-ID: <32053F44.342E@interpoint.net>
Source record: 81551

Thanks to whomever sent Aztec to the archive, and thanks to Yogi for having a great site. Finding a file of this magnitude is a victory for all of us here in C.S.A.8!
AS MORE FILES ARE FOUND, MORE FILES ARE DOWNLOADED AND DISTRIBUTED, RESULTING IN LESS CHANCE OF EXTINCTION!!
This is the definition and the sole purpose of all Atari archives and this is why they MUST survive! Whomever has donated files to the archive, please keep up the good work, I myself have donated my entire software library I spent YEARS collecting without a second thought about it, For I believe what comes around goes around, and here is another example of myself finding a file that was permanently destroyed by accident that I thought I would never see again.

****Praise the Lord, 8-bits Live!!****

The Atari Archive at Cyberspy is in our prayers for a safe return.

-Rich Tirico.

Steve, I have a Connor 1.275 gig hard drive and I am having problems with my PC mirror recognizing all of my files and directories. It displays about half, and if I create any new directories it won't recognize them. This has forced me to use existing folders to store .atr images, etc. Is something not setup right? Has anybody had problems using larger hard drives with ape 1.09? If so, please update this in 1.10.

Thank You,
-Rich.

I have the same problem. After about 60 files, APE stops sending me a
directory listing. I'm running Ape on a dedicated 486/66, 16mb RAM and
an 850HD...

Its really frustrating.

My only REAL problem with APE is with its inability to allow me to
insert a mirror path beyond like 12 characters. I go about 5
directories deep somtimes for my files, and you cant get the mirrored
option to display that long a path..

> O.S.S. <none> 84 Mac/65 U [ ][ ][ ]
> O.S.S. <none> Writer's Tool, The U [ ][ ][ ]

It is strange that Action! is still "Common" and BasicXL is "Uncommon" since BasicXL outsold Action by maybe 2.5 or 3 to 1. Perhaps that means that there are still people holding onto BasicXL whereas too many people bought Action! but couldn't figure out what to do with it.

Actually, I'm pretty sure that Mac/65 outsold Action! by maybe 1.5 to 1, as well. But don't quote me on that one.

Just as a point of reference, BasicXL sold around 12,000 copies before ICD took it over. That sounds like a lot until you realize that TurboPascal sold 250,000 the first year and a half. Is it any wonder that system software suppliers for the Atari were few and far between? (That 12,000 copy figure MAY have included BasixXE, which was admittedly a much worse seller. A money-loser, more than likely, though one of the reasons we ended up going out of business was that we were such poor marketeers that we didn't even know where our profits were coming from. Sigh.)

Incidentally, Personal Pascal for the ST sold a bit over 10,000 units as well (NOT including upgrades from V1 to V2), and in a MUCH shorter time. People really DID program on the ST a lot more than they did on the 8-bits (proportionate to ownership, that is).

Incidentally, sorry to disillusion those of you who thought I was dead. At least not until after I hit SEND on this, at least. *_*

Well, not exactly. The *other* Atari company, Atari Games, will
now have the name all to itself. So when "Atari" is referred to in
the media, we Atarians will know it really means the other company,
but the public and many media reporters are still going to be con-
fused by it.

Is Jumpman in your archive in any other form than a .pro image? (I'm trying to run it on Rainbow for the Mac, so obviously APE is out of the question.) I looked at your web site, and it says it's there as an ATR, so maybe I don't have the most recent version of your archive.

BTW, if Rainbow isn't fast enough yet, it probably will get that way. On my PowerMac 7500 (100 MHz PowerPC 601) it seems to be capable of running at nearly 100% of normal 8-bit performance with full frame refresh (i.e. it tries to do 60 Hz). There really isn't a lot of stuff that fails to work, either. I'm going to register it soon. I'd just give the Windoze version some time to get optimized, since Chris seems to have done quite a good job at writing a solid emulator core.

The only thing I'm worried about is that there doesn't seem to be a performance limiter! I'm going to upgrade my computer to a 200 MHz 604e processor some time in the future. This will probably make Rainbow unusably fast even with the full frame refresh on and all features enabled. If you're reading this, Chris, I seem to recall that the MacOS provides a standard 60 Hz synthetic VBL interrupt queue which would probably work great for doing a speed limiter...

It is truly a classic. The game exists on the Apple II emulators, and
can be found at ftp.asimov.net/pub/apple_II

(Dave asks for programming resources for A8.)
Dave. You gotta have mapping the Atari from Compute. You have Atari BASIC. Read Bill Kendrick's Newbie FAQ on how to use Atari BASIC. (Lon Poole's 'Your Atari Computer' is a great book on it. There is much source code in magazines, assembler, BASIC and ACTION! Get some old ANALOGs, full of source code. (Antics too). Uhmm. What else. The Cleveland Freenet has a reference area that is good for a lot of things, I would not be surprised if there isn't reference materials there for programming (sorry I don't know specifically.)
There's plenty of BASIC code in the umich archive, I bet.
And finally, I'll offer you to look at my considerable pd library and you can pick BASIC programs you might want to look at, much of my pd object files I don't have source code for.

I agree and am also very grateful to Yogi for putting such a great
page online. It finally appears that the reflexive 'pirate' bashers
who shrieked at the notion of any 8bit software being made available
to us have shut up.

Yay! The free distribution of ancient software is nothing but good for
the survival of the platform. And the big secret is that that the
authors of the ancient software DON'T CARE. I keep up, and have yet
to hear of a single 8bit author who resents the fact that her/his
antiquated software is available in 1996.

Daniel

1057. nbcombat.asm (1/1) Combat for Atari VCS revealed

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-05 00:00:00 UTC
From: nickb@Primenet.Com
Message-ID: <4u4fdp$9of@nnrp1.news.primenet.com>
Source record: 81558
Cross-posted to: alt.religion.kibology,rec.games.video.classic,comp.programming,alt.atari.2600,comp.sys.atari.8bit

In memory of Atari, I decided to post something I've been messing around
with for some time.... I got the source code to Combat on the Web
somewhere, tacked onto the end of a few bits and pieces about programming
the Atari 2600, but it had minimal commenting, I didn't know what was
going on, so I decided to take a closer look and here is the restult.
This is far from complete, mind you.

```
--- combat.asm ---
; Written by ??? (I've looked everywhere for the author's name)
; Disassembled by ??? (would be nice)
; Commented further by Nick Bensema.
; Last Update: 08/04/96
;
; Since nothing is off-topic in alt.religion.kibology
; and everyone there just sees me as some sort of clown
; that's only here to amuse them, I'm posting it there
; too, just to show 'em. I'll explain a few things
; to them, and those of you who just read a little 6502
; assembly in Compute but never got really into it.
;
; First a bit of history. Combat was included with the
; famous Atari 2600/VCS for many years. As a result,
; if you go to any thrift store, you will find crates
; of Combat cartridges, and some guy from
; rec.games.video.classic swimming through it, refusing
; to admit that Sum Guy just ran off with the mega-rare
; Chase the Chuckwagon cart with the misprinted sideways
; label that he's looking for.
;
; To fully appreciate the trouble people had to go through
; to make an Atari 2600 game, I decided to try my hand at
; picking apart a relatively simple game, Combat. This
; game works in only 2K or ROM and not even the full 128
; bytes of RAM made available to it. As if that weren't
; enough, the program has to literally draw the screen
; every single frame, and even Combat had to resort
; to changing some graphic or other in the middle of
; a scanline. And the programmer had to walk five miles
; to work, uphill both ways! And he only got a nickel
; a day for writing code!
;
; The Atari 2600, or the VCS, or the 2600VCS, or the
; Atari VCS, or the 2600, or the VCS-2600, or the Sears
```

```
; Home Arcade System, or the Intellivision Add-On Thingy
; That Plays Atari 2600, VCS, 2600VCS, Atari VCS, 2600,
; VCS-2600, and Sears games, runs with a 6507 processof.
; This processor is exactly like the 6502 found in Apple,
; Atari, and Commodore home computers except for two
; things: 1) it has a wait state, and 2) it has only
; 12 address lines instead of 16. So, while your Apple
; II can address $0000-$FFFF, the Atari 2600 could
; only address $0000-$0FFF. That's a whopping 8K.
; The cartridge ROM accounted for anything about $1000.
; You're going to love this part. It had 128 bytes of RAM
; at $0080-$00FF, and the TIA, its video chip, which
; doubles as the 2600's entire video memory, at both
; $0000-$007F, and $0100-$017F. The first copy, along
; with the RAM, could be accessed with zero-page addresses,
; saving space on the ROM, which by the way was 2K.
; The second copy infiltrated the last 128 bytes of the
; 6507's built-in stack. In the source code, you'll see
; how this is used to the programmer's advantage.
;
; That's all I'm explaining. If you want to hear more
; on the 2600's specifications, do a web search for
; 2600 programming information, because I've already
; wasted so much of your time.
;
; I did a lot of cutting and pasting and searching
; and replacing. Be sure to check that this compiles
; to exactly 2048 bytes, and that it matches up with
; all of your uncommented source code before trying to
; modify it... if you dare! For some reason the guy
; who disassembled this didn't put $ before all the hex
; numbers... so keep in mind, hex is always implied.
;
; I also suggest you hand this to those who want to pirate
; 2600 cartridges. Not that it'll stop them, but it might
; make them feel guilty enough to seek absolution.
;
; Not having an assembler, and of course not wanting
; to try to use an emulator, I may have screwed up
; big-time on many aspects of this program.
; Forgive me if I did.

; After a CMP/XPC/CPY, BCS means Branch if >=.
; Remember this one....

; This subroutine sets up the sprite data for each
; player. The graphics data at the end of the ROM
; don't account for an entire 360 degrees of movement,
; it would take less memory to just draw 180 degrees'
; worth and write code to compensate for the other half
; of the circle.
;
; Bit 3 of DIRECTN for each player determines whether
; he is past 180 degrees, and when this bit is set,
; this subroutine compensates in the following ways:
;
; 1. It sets the TIA's reflection flag for that
; player, taking care of the horizontal aspect
; rather easily.
;
; 2. Instead of starting at byte 0 and ascending to 7,
; it starts at byte 7 by EOR'ing 7 into the address,
; and it descends to 0, using the carry bit as a
```

```
; flag to determine whether to increment or decrement.
;
; The X-register starts at 0x0E plus player number
; and goes down by two each time through the loop,
; until it hits zero. This way, after calling this
; subroutine twice, every even-numbered byte contains
; the left player shape, and every odd-numbered byte
; contains the right player shape. It seems odd, no
; pun intended, but the screen-drawing routine is
; designed to handle it.

1059. Re: ATC is gone for good

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-05 00:00:00 UTC
From: BobKlaas <bobkla19@mail.tcd.net>
Message-ID: <4u4rhi$c00@news.tcd.net>
Source record: 81560
Cross-posted to: rec.games.video.atari,rec.games.video.classic,comp.sys.atari.8bit,comp.sys.atari.st

The demise of Atari should be a good lesson for anyone in the industry. Look at what they had in the begining, Top name in the industry, fastest growing company. Stock went from $11.25 a share to over $35.00 in a short period of time, split and started all over again. Then they were sold, new owners came in and did what they thought was best.??

But they forgot one thing, they had over 1,000,000 customers of a product put out by the previous owners. These customers were loyal and dedicated. The new Atari went on a campaign to produce new products, at each show or exibit the customer representatives Atari, would do their best to Piss off the old dedicated members of the Atari comunity. Atari expected this group of now totaly irate customers, to buy their new product. As you look back you can see just how many supported the New Attitude, developed by Atari, the demise of Atari has nothing to do with competition, it was self distruction plain and simple.

If you have 1,000,000 plus customers you definately have a market to draw from. You or any Company with any sense will support those customers, kiss up somewhat (or a LOT!) to gain thier confidence in the new product. Backward compatibility has never put a company in the RED...But to blatenly tell your customer base to go to hell in so many words through Customer Service Represenatives sure will put any company out of business.

At least with the merger if it is approved the stock holders have a small chance of recouping, at least we know hard drives are in demand.

Bob

1060. Rainbow95 IS slow

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-05 00:00:00 UTC
From: Bill Somrak <cooncat@ncweb.com>
Message-ID: <3206237E.576D@ncweb.com>
Source record: 81561

Yes, it is.

I've been trying out different games on my 486DX4-120mhz machine, and things are VERY slow. Even just booting up an "installed disk" takes some time. According to the FPS utility, I am running at 90% efficiency.
I don't know if there is anything I can do to speed things up, but any of the other setting (other than NORMAL), seem to make things worse.

Player/missles aren't right on, as yet, as half the shots I take at the Space Invaders pass right thru the invaders.

It would be nice to have sound .. I wonder if sound AND a joystick control are available on the MAC Rainbow??

Well, back to testing ... this software shows promise .. at least more promise than PC Xformer, on which FEW things run correctly.

Bill

1061. Pokey information

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-05 00:00:00 UTC
From: twilight@axess.com
Message-ID: <4u54vc$rgp@news.axess.com>
Source record: 81562

Hi folks.

I've been looking around, but I have not been able to find any technical information about the Pokey chip in the Atari 8-bit machines.

Does anyone here know where I can find some information about it? I would basically want to get some documentation about how the sound chip works.

I'll be working with an Atari 130XE, but I assume the Pokey chip is the same in all the 8-bit models.

John

1062. Read ATARI disks in a 1.2M 5.25" PC Drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-05 00:00:00 UTC
From: fogalde@cec.uchile.cl
Message-ID: <4u57it$ecg@ict.cec.uchile.cl>

I tried to read atari disks formated with dos 2.5 at enhanced density (the ones with 130k capacity) with anadisk 2.07 but it fails. It can only read the first bytes of every sector.

There is some utility to do this work? There is somebody who can tell me how to read this kind of disks, I'm desperate to read my old disks on my PC and run it on the emulator!

Fogalde@cec.uchile.cl

1063. SIO2PC cable ICL232 question...

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-05 00:00:00 UTC
From: jphindin@atlantis.actrix.gen.nz
Message-ID: <4u3rij$l5t@asgard.actrix.gen.nz>
Source record: 81564

Hello all, again.
I was reading the plans to build the SIO2PC cable and the fact that it needs a TTL-232/232-TTL converter is obvious. Question is: Why does it need to be an ICL232?
OK - the instructions say that it *needs* to be this due to the fact it uses the 5+ voltages the Atari SIO ports produces.
Now - why can't I use a plain 232/TTL converter chip and route the 12+ Voltage from the PC? Is the any specific reason - Am I outstepping my bounds as a novice in electronics?

Also - does anyone know why the HDD all seem to be SCSI setups? Is there any specific reason why there isn't any IDE drives?

Is your PC mirror not recognizing the files or is it your atari?
Could you explain what you mean by that statement?

Do you have more than 64 files in the directory you are trying to access?
I am not 100% sure, but I believe you can only have 64 files and/or
subdirectories in a directory. I think Atari DOSes have this limitation -
I know spartados does have this limitation (at least the disk-based version).

Or maybe I am not understanding your predicament clearly...?

IDE is IBM's "crippled" version of SCSI. Using it is an excercise in
frustration for anything except a plain-vanilla (e.g., factory-installed)
single-mechanism setup. If you enjoy suffering, you'll love IDE.

AtariCorp did a very nice job of self destructing by f**king over customers with breathtaking efficiency. They seemed to be primarily concerned with the stock market, as opposed to the computer market. How JTS conducts itself will be a interesting thing to watch. Have they actually shipped product yet? Or is this going to be another "Hype the VapourWare, pump the stock price, sell sell sell, then when the stock drops, buy it back and do it all over again" scam?

I agree, There is definitely something wrong with the PC mirror portion of Ape. I have ALOT of directories on my harddisk and I would like to create more separate directories for my Atari files, but when I create a new directory, MYDOS won't recognize it. It's like you said after about 50-60 directories it kind of cuts off or something, it's strange. Steve said that as long as DOS recognizes it Ape will. Well, I think Ape DOES in fact recognize it, but MYDOS through accessing a PC mirror drive definitely doesn't. Maybe it has to do with all of the Atari Dos's?? ....Hmmmmmm Very Strange. Damn this really is about the only flaw in Ape I really see! If this could be fixed, I would say it's Perfect!

Nick,

Combat was written by Larry Kaplan.

Other works by Larry were....

2600: Air Sea Battle, Slot Racers (I think) and Bowling at Atari.

Bridge and Kaboom were done at Activision.

Also, he was one of 4 programmers who wrote the 800/400 O.S. and he
wrote Super Breakout for the 800/400.

Currently Larry is working at 3DO in Redwood City, Ca.

Message-ID: <3206eebe.5357717@news.cyberspy.com>
Source record: 81483

As you all know, the archive as it was is gone for the moment. We had a little "problem" with one of the sysadmins at Cyberspy.

At any rate, the new archive will reappear within the next two days. Id like to thank everyone (and I mean everyone..over 30 emails offering to help) who offered to send me back the contents of the archive.

It will be back in full force with an entirely new, additional archive added to the two existing ones.

The new location will be ftp3.cyberspy.com/atari8.

The URL wont work for the next day or so (when I finish setting up the server).

Thanks everyone for your help and patience.

Joe Kearney

What precisely are you looking for? Pokey is the serial I/O controller, keyboard scanner, paddle monitor sound generator and random number generator... there's lots to cover there. The best information for programming is in Mapping the Atari. A group in Britain has a revised edition available - check out the vendors and developers list.

Dave Paterson

>It is strange that Action! is still "Common" and BasicXL is "Uncommon"
>since BasicXL outsold Action by maybe 2.5 or 3 to 1. Perhaps that
>means that there are still people holding onto BasicXL whereas
>too many people bought Action! but couldn't figure out what to do
>with it.

:-) I loved Action! It was my first ever compiled language, and learning it provided me with some good groundwork for later learning Pascal and C. I wrote an awesome Life game that achieved maybe 2 or 3 fps on a 40x24 text mode grid with Action!. I bet I could do a lot better now, but back then that was pretty impressive to me. I was forced to figure out double buffering and machine language (for the routine which computes the next state of the Life grid) to get it to go that fast. The only un-fun thing about it was the ML code; I had to hand-assemble it into hex numbers since the language didn't support true inline assembly... I also wrote a Tetris clone that worked pretty well, and I don't think I had to put in any ML to make it go fast. (It was also a text mode game, I didn't try the graphics modes out too much.)

Only problem I really had with Action! was that I never could get the runtime library to work so I could distribute the programs to other people.

I have BBSB in cartridge form and it is one of the greatest games ever.
My game has a flaw though, after every few levels you are supposed to get a
code that will let you jump to that particular level when you start a new
game, my game only gives me the first code, after that all I get is a black
screen on the code levels.
If anyone knows any or all codes please post them so that I may eventually
complete this game.

It does not.

>OK - the instructions say that it *needs* to be this due to the fact it
>uses the 5+ voltages the Atari SIO ports produces.

Check my web page at http://www.nacs.net/~classic for a version that
uses a cheap 1489 line doodad.

>Now - why can't I use a plain 232/TTL converter chip and route the 12+
>Voltage from the PC? Is the any specific reason - Am I outstepping my
>bounds as a novice in electronics?

There are some chips in told that can run off the voltage from the
RS232 lines alone, but I have not personally seen them. I also
doubt they are cheaper than the 0.49 a 1489 costs. Probably more
around the max232 cost?

I'm open and interested in any new efficent designs.

>Also - does anyone know why the HDD all seem to be SCSI setups? Is there
>any specific reason why there isn't any IDE drives?

There were some posts about $20 IDE interfaces a few months
ago, andsome people have said they did have IDE drives installed but
I have not seen anyone post any plans recently or say how well
they work.

BILL WILKINSON!
I gotta get in here. I tried to find 'Atari BASIC Source Book', I had a used book place search for it, I looked for B. Wilkinson, called MARTA in Atlanta, there was a Bill Wilkinson there. Did everything to find that book. I finally bought it from a Cannuk who was selling it (thanks). About BASIC XL vs ACTION! I think maybe OSS (BW) sold a little early. I know I bought my ACTION! and M65 after OSS sold to ICD. ACTION! was a sleeper, it caught on late. So even if BASIC XL sold 3 to 1 to ACTION! when OSS had them, I think ACTION! and M65 came on strong later. Just my 2c.
Glad to hear from Bill Wilkinson. I'm never ceasing to be amazed who shows up here.

What I'm interested in is the sound generator part of the chip. I
don't need any information about the rest of the functions the chip
does, but it would be really appreciated if I could find in-depth
information about the sound part. Got any helpful information?

Thanks.

John

1082. Programming for the Atari 2600

> state of the Life grid) to get it to go that fast. Yeah, that surprises me. I would think Action alone could have
gone that fast. (Maybe do the block copy from buffer 1 to
buffer 2 via ML...but I think the library had a routine to
do that, anyway, didn't it?)

> The only un-fun thing
> about it was the ML code; I had to hand-assemble it into hex numbers since
> the language didn't support true inline assembly... True about no inline, but you could pretty easily have assembled
(using Atari Asm/Ed or Mac/65) the routine(s) and stuffed
them at LOMEM. Move LOMEM up before starting Action, load
the ML to the old LOMEM (where it was designed to go, that is),
and then simply compile normally. Action will not use the area
below what IT thinks is LOMEM, so voila!

> Only problem I really had with Action! was that I never could get the
> runtime library to work so I could distribute the programs to other
> people. Too late now to help you on that. I know many people who DID make them work, so I would presume it was cockpit error on lack
of evidence to the contrary.

Daniel said that it had a Terrific interface. Without grabbing my dictionary, I would say off-hand that that was a compliment, not a critzism. His main complaint was that it wouldn't run anything but the demo file that comes with it. I didn't get it yet because I only have one machine running win95 and that one is put away temporarily (or maybe permanently). I'm no fan of win95.

1095. Atari-related site, sort of...

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-07 00:00:00 UTC
From: Bill Wilkinson <BillW@Asymetrix.com>
Message-ID: <3208F44E.6325@Asymetrix.com>
Source record: 81421

Check out "www.laughton.com".

Paul Laughton and Kathleen O'Brien were two of the founders of OSS. Even though they dropped out of the company after a year or so, they were certainly instrumental in getting it started.

Paul and Kathy were the primary authors of Atari Basic (I did maybe 10% of the work, as I was busy on other projects at the time, though the conversion from Atari Basic to Basic A+ [does anyone remember it? the predecessor to Basic XL?] was perhaps 90%+ mine).

Paul was the author of Apple DOS, as is thoroughly documented on his site.

Kathy was the prinicipal author of the Atari Assembler/Editor cartridge. (Several years after she wrote it, Atari asked her to make some changes to it. She was busy and so they asked me. Out of a list of perhaps 20 to 30 changes they wanted [including better speed and "include file" capability], only ONE was a legitimate bug! And it was due to a typo: a semicolon where a minus sign was needed. 8K bytes of code with 1 typo as an error; 99.9% perfection in about two and a half months.)

And an excerpt from the Atari Basic Source Book (ahem) shows up on the page as well.

Use Navigator 2 or better to see all the neat features of Paul's page. (You don't have to agree with his politics; I don't. *_*)

A lot of fun early Apple II stuff here, as well. Betcha many of you didn't know how closely related the software for the two machines was...at least in terms of people.

My ICD-MIO (256K ram) power supply has a 9V AC output of 31 VA. Maybe you can find a good substitute at Radio Shack or an electronics supply store. Another good source for Atari accessories is Bob Klaas. He runs a mail order company called K-Products. You can e-mail him at: bobkla19@mail.tcd.net

You connect the MIO into the rear of your XL or XE (need edge card connector for XE). When you power up your Atari, hold down SELECT. Then you will see all the MIO menu options. I think the default ramdisk is D6: There is a default printer buffer size (64K ?). There are some interesting ICD utilities for saving and restoring preferred MIO configurations. I have some of these stored away, if you are interested

You can access your MIO menu after booting up your Atari by pressing RESET and SELECT at the same time.

Since I got APE'd, I have not needed my MIO these days......

Happy Computing, from Doug Feldman in Ann Arbor, MI

1099. FS/T: Atari 8-bit computer items [08/06/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-07 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4u8mmf$4u5@dfw-ixnews9.ix.netcom.com>
Source record: 81507

If you are looking for something that isn't listed, please don't
ask (because if I had it, I'd list it). Also, please be sure to
read the entire message carefully before you ask me any questions.
This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 08/06/96

NOTE: There are currently 955 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full
postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't
serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 4.50 Basic -- for the 400 and 800
$ 5.50 Basketball
$ 9.50 Delta Drawing (Spinnaker)
$ 7.00 Deluxe Invaders (Roklan)
$ 9.50 Jumbo Jet Pilot (Thorn EMI)
$ 9.50 Kids on Keys (Spinnaker)
$ 4.50 Pac-Man
$ 9.50 River Raid (Activision)
$ 4.50 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 130XE Personal Computer Owner's Manual (132 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 9.00 Atari DOS 2.5: 1050 Disk Drive Owner's Manual (147 pgs.).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

$ 9.00 Inside Atari BASIC [Atari / Reston] (183 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$42.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE, with original power supply, and one (1) Molex connector cable.

$39.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #4

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 7.50

*****

LOT #5

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$19.50

*****

LOT #6

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$24.50

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

You could tap 12 volts from inside the PC, but the existing SIO2PC designs
are made to simply plug into an Atari SIO port and a PC serial port. The
PC's serial port doesn't have a dedicated +12 volt line, but there are
some laptop modems that draw power from the serial port, so it's
theoretically possible.

>Also - does anyone know why the HDD all seem to be SCSI setups? Is there
>any specific reason why there isn't any IDE drives?

The MIO 2, if it ever actually goes into production, is supposed to be an
IDE interface.

Speaking of BASIC XL, I have that and BASIC XW. If someone is in need
of a BXL cart (OSS Orange cart with the loose leaf manual) I'll offer
it for sale. Make an offer via e-mail.

> do that, anyway, didn't it?)

Actually, I never copied one buffer to the other. The buffers were also screen memory; the ATASCII code for a space represented a dead cell and the code for the round dot was a live cell. The buffer being pointed at by the screen origin register (in ANTIC if I recall right) was the current generation; the offscreen buffer was the next generation. Once I was done computing the next generation from the current, I would simply alter the screen origin and reverse the buffer roles. It's the fastest possible
way to copy to the screen: just change the location of screen RAM.

I too think Action alone could go that fast. I'll have to dig up the disk with that code on it and take a look, it would be kind of neat to try and figure out what I did wrong after all this time.

It is possible (you'd have to ask ICD, or maybe
Mike Hohman of FTooned), but to the best of my
knowledge ICD never made more than a handful of
carts after they bought it from us. ("Handful"
probably means one production run, which would be
in the 100 to 300 range, more than likely.)

By the time we sold to ICD, we were down to selling
dozens per month. ICD never advertised the carts,
explicitly, so all their sales must have been via
dealers who knew the product.

I know B&C Computervisions finally sold the last
pre-ICD BasicXL quite some time after we sold out
and, again so far as I know, never ordered more
from ICD. Also lending credence to the theory that
ICD sold only a handful (relatively speaking).

We probably sold more Action! in the second half
of 1984 and first half of 1985 (our fiscal year)
than in all other periods combined. Once the
Mac, PC, and ST all appeared, the count of people who
bought 8-bit Ataris and then actually PROGRAMMED then
started dropping off fast.

What a bunch of crap! I've been using IBM's and IDE hardrives for years and
have found them to be among the simplest and most problem free devices in the
computer idustry. Do you really think clone makers would still be using these
things if the average computer illiterates that are buying these clones today
couldn't operate them reasonably problem free? Pardon me but it doesn't sound
like you're speaking from experience.

I've never seen one available for purchase. Bob Wooley experimented
a couple of years back. I never heard if he succeeded. I did see,
however, info on one web page about IDE for the 8-bit. Ummm... I can't
remember which one it was now. Big help, huh...

>probably work great for doing a speed limiter...
>

There isn't a preformance limiter that I can see. On my 110MHz Radius (same as Power Mac 8100/110) the thing absolutely SCREAMS. In some cases, the Atari software runs 3-4 times faster than on a real Atari. I surprised you don't see the same performance on your 7500; it's only 10 MHz slower. Either you are lacking a Level 2 cache or you run a lot of extensions (or maybe AppleTalk) with your normal system configuration.

Anyway, it really is a well-written program, despite this minor concern.

-Michael Ellis

1123. Re: Printing With Super Score On A 1040XL

That would be a 1040ST. The ST newgroup is:

comp.sys.atari.st

You will need to find out if your program supports GDOS and such.

Good luck.

1134. Scraper Caper for Atari wanted!

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-08 00:00:00 UTC
From: qmnmaren@dingo.cc.uq.oz.au
Message-ID: <4udo7k$rc9@hobyah.cc.uq.oz.au>
Source record: 81447

Most Atari users are quite familiar with the game Miner 2049'er. Most are also familiar with the sequel, "Bounty Bob Strikes Back".

But what most Atari users don't seem to be aware of is that Bounty Bob strikes back is not actually the sequel to Miner 2049'er. The next Bounty Bob game to be released (at least it was advertised in several magazines at the time) was a game called Scraper Caper. I have not seem the game or seen it on any archive. Does anyone have or know anything about this game?

Does anybody know whatever happeded to Big Five Software and the programmer, Bill Hogue?

Nickolas. Computer Collector.

My lowly 7200/75 runs most of the Atari software faster
than the Atari hardware - I generally have to slow it down.

From: hobo <hobo@mad.com>
Message-ID: <320A7965.60FD@mad.com>
Source record: 81449

I've got an 800 with this OMNIMON inside it and 3 switches
hacked into the console, but I don't know how to utilize the thing.

I can get it to come up in a monitor-style mode, but I have no
idea what the commands are. I also had the impression this thing
would do 80 columns...?

I have absolutely no documentation...I really could use some.

Cyrus

1137. UPDATE: Digital Antic Project has 2 more issues

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-08 00:00:00 UTC
From: savetz@northcoast.com
Message-ID: <savetz-0808961232240001@news.northcoast.com>
Source record: 81450
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic

We have added two more issues of Antic Magazine to the Digital Antic Project since is was first announced last month. In addition, we've added dozens of cover images and a few more classic ads.

Check them out at http://www.northcoast.com/savetz/antic/dap.html

Here's what's new...

August 1982 - Vol.1 No. 3

Printers Reviewed - Dot Matrix Printers
Assembly Language - BASIC line number deletion
Dollars to Sense - Translate
Two Mare Printers - Smith-Corona and Alphacom
Starting Line - Get Rid of Those Bugs
Banner - Another Use for Your Printer
Spyder - Draw Color Pictures with or without GTIA
In the Public Domain - Pac Invaders
Typo - Find Those Pesky Typing Errors
Pilot Your Atari - Colors
Systems Guide - Memory Map continued
Education - Zahrcon, a new version of hangman
Forth Factory - Turtle Graphics, part 1
I/O Board
Product Reviews - Threshold and Wordrace
New Products
Looking at Books - Atari Learning by Using
Review of Practical Peripherals print buffer

October 1982 - Vol.1 No. 4

Sound Advice - Use POKE instead of SOUND
Inside Atari - Atari Institute Teaches Music
Audio While You Cload - Add voice to your cassette programs
Music With BASIC - a short how-to
Zounds - an introduction to music synthesis
Starting Line - A sound introduction
Inside Atari - Upgrades Available
Assembly Language - Bubble Sort
Systems Guide - On Having A Good Time
Pilot Your Atari - A Musical Pilot
In The Public Domain - Speed Demon
In The Public Domain Bonus Game - Frog
Education - Tuning Your Atari

Forth Factory - Turtle Graphics Part 2 & Turtle Glossary
Tape Topics - A Message on the Medium
Benchmarking the Fastchip
I/O Board
Editorial
Product Reviews - S.A.M., Alien Voice Box, Nautilus, K-razy Antiks

The Digital Antic Project is a small crusade to put all of the old issues of Antic (and eventually its sister magazine, STart) on the Internet. I have received permission from the publisher of Antic to make the material available on the Internet for free.

The site currently features the complete text of the first four issues, as well as cover art and memorable ads from the magazine. More material will be added as time permits -- faster if YOU volunteer to help by scanning, HTMLizing, or proofreading.

The site is at http://www.northcoast.com/savetz/antic/dap.html

Your comments, suggestions and help are welcome!

Cheers,
Kevin Savetz

Yes. The channel setting is on "lo". What is puzzling is my
800xl works great using the same cable and switchbox.

Someone recommended I grab the comp video out signal and hook it
to a comp video monitor...if the tv out doesn't work soon, I'll
slug it out with the soldering gun.

Well, not exactly. Time/Warner is in the process of switching the Atari Games name to "Time Warner Interactive". In fact, if you look at any recent Atari Games machine, you will see "Atari Games/ Time Warner Interactive" printed on it (check out "Primal Rage"). It's a transitionary period that will end with the dropping of the Atari name altogether. It's very sad, but true.

I know this is the 8bit forum, but I thought someone here
might be interested in the following:

**********FOR SALE**********

ATARI 520 ST, 512K, POWER SUPPLY, MOUSE
(2) SF 314 DRIVES (720K), POWER SUPPLY, CABLES

$60 + shipping.

Best offers welcomed. If you are in or around Tucson, Arizona,
you can pick up in person and forget the shipping.

All equipment checks out fine. I was having some
problems with one of the drives, but it seems to
be working all right now.

I have some software but it's mostly share/freeware.
It comes with STARTER.TOS, Uniterm, Kermit, and some
games.

Usually I ship US Post, but can ship UPS if requested.
Would prefer to ship within the US, but will consider Canadian
offers.

If interested, please leave e-mail.

This topic has come up before. There is no way to use a 130XE or any other 8-bit Atari with an ST monitor. See if you can pick up a Commodore monitor as they work the best.

1149. New Drive for Atari 8 Bit

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-09 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <4uf36s$eoh@widukind.worms.fh-rpl.de>
Source record: 81378

Hey everybody out there " NEW format's and compatibility !

It's true i am testing a upgrade that allows you to use 720KB DD Disk's in a XF551 now XF351.

It's just a new Rom in The XF551 and that allows you to use a 720KB Floppy disk drive. You can' t use HD Disks (1,44MB) and u must have a XF. This new Rom is so well that i could copy Alternate Reality or the Pawn to 3.5 " Disks and play from them (I have the org. games).

Following Dos work with the drive:

Sparta Dos x3.2f SD SS up to DD DS (80 Tracks)
Mydos 4.x SD SS up to DD DS (80 Tracks)
Dos 2.5 SD Ss up to ED (130KB)
Bibodos 6.X SD SS up to DD DS (360KB)
BWDOS With all of it's formats
Dos 3.0 SD SS - ED SS
Dos 8.x SD SS - ED SS
Dos 2.0 With all of it'S formats
WS Dos 7 " "

the Disk can booted and works 100% with working Software that runs on XF and 1050. It works like a 1050 with more formats.

It should be the new standard 90KB - 720KB 100% XF/1050 comp.
If you break in your original Disk that can' t be copied and copy it on a 3.5 " Disk you can play it from a 3.5 " Disk . If u close the HD-hole on HD Disks u have no problems to buy storage for your files. If tested it so far that i can say it solves the problems of the XF version 5.25 and gives you a great range of useful Doses and Storage. But if you use the bad Doses (no more that 130KB, u make only use of a litte strorage . I meam worse use of Price/Storage.)

If someone uprages the Quarz from 8.9MHz to 16MHz and uses a Ajax chip (if possible) it should allow you to use the full 1.44MB . In this case you have a little Harddisk like the Zip-Drive for the PC.

But who has a Database with more than 180KB, you could copy 4 times more file at a disk (jawohl). With 64KB Ram are 720KB a little very cheap HD Drive.

When you look at the controller of the XF u will see that it is the same as in the Atari 1040ST's. So it could be possible that Atari was sorry about a such good drive that the have made it in the way they did. Imagine in 85-87 was the ST very expensive and the XL Soft was better.

Ok the market is closed.

In the next weeks will follow a more informing test and a/several adresses where you can get this upgrade. IF you visit the ABBUC JHV in Germany you will see this uprade and can test it. So, don`t miss the ABBUC JHV if you are interested in more great hardware from GERMAN developer, groups's ....

Can't...the SC1224 monitor is an anolog RGB monitor that that's dedicated
red, green and blue signels from the ST. The 130XE can only produce
composite video signels at it's best and there fore can't be used on a
SC1224.

Now, I heard of a device that can translate composite signels into RGB to
be used by a ST monitor but it cost about $500-$700 for it. Ouch! :(

Connect it to the joystick port. I believe port 1 but any
port might work. Then load the handler XEP80HAN.COM and it
will start up.

>normal system configuration.

I have a L2 cache. Normally the 7500 is faster than the 8100/110 due to
the performance improvements in memory access and video. Are you testing
with the TV option set to "Normal"? I was talking about "Every", which
tries to update the screen at the full speed of 60fps. If I have it on
"Normal", which doesn't do screen updates nearly as often, then Rainbow
runs _much_ faster than a real 8-bit.

Some games, like Jumpman, absolutely need "Every". But others run OK on
other settings.

I would gladly do both.

To use the XEP80 on your 800, connect the joystick cable to joystick port
2 on your 800. Power the XEP80 up and connect a standard video cable
between the XEP80 and whatever you're using as a monitor (monochrome
composite preferred).

Use the drivers (if you have them) to get an 80 column screen in DOS or
load any of several shareware/PD/commercial drivers for programs like
Bobterm, AtariWriter 80, etc..
```

James King
4096 West Yorkshire Drive
South Jordan, Utah 84095

In fact, send me an entire first class envelope, pre addressed and
stamped and I'll give you an original XEP80 manual with an XEP80 driver
disk.

d> doesn't sound like you're speaking from experience.

I replied to the email copy of this, but now I see it here. %^(

Clone makers "use these things" because they are cheaper than SCSI. Joe
Average doesn't /install/ IDE drives, he buys a Putrid Smell or other clone
with a drive already in it. When the time comes to add a second (or, gods
forbid, subsequent) IDE drive is when the problems appear (aside from little
problems like MS-DOS' inherent limitation in the number of cylinders it can
handle; SCSI doesn't have that problem because DOS doesn't know how many
cylinders a SCSI drive has). Two different brands of IDE drive will often
conflict. Western Digital and Maxtor are a perfect example.

As for experience - I used to build and upgrade clones at Lightspeed Systems
in Houston, TX. I was also the system operator for their public BBS. Their
phone number is 713-664-0002 if you want to check my references. Talk to the
CEO (Mike), or the VP of Operations (Eric) if you want to know exactly where
I stand with that outfit.

Currently, I work in the network software lab at Intel, where I spend many
hours swapping drives around and configuring systems for "torture" testing.
SCSI drives give me trouble only seldom (and that's always been caused by
Microsoft's brain-dead install procedures for their operating systems). IDE
drives are fine as long as there is only /one/ drive in the system. And when
you add that second drive, all Hell breaks loose if it's not the smae brand
as the Master drive.

"Our" favor, who? Unless they decide to use the money to start making
more games and/or a Jaguar 2 that can compete with the current systems out and
being developed it won't do anyone except JTS any good. And frankly, at this
point, I doubt the idea of games is being bandied about anywhere over there.

check the black and white switches in back, you may have them configured for
being drive 2 or whatever. if a light comes on then all is fine as far as
power supplies go.
Looking towards the front from the back of the drive, you want both the
white and black switch clicked to th left. To designate one as D2: you want
only the white one clicked over to the left.

It's possible that I was using a different screen mode; I'm not sure. I
probably tested it using whatever the default mode is. That would
certainly explain our performance differences.

BTW, it is worth mentioning that I am using Speed Doubler 1.11 and System 7.5.3.
Both offer HUGE performance gains over a standard System 7.5.2 setup without
Speed Doubler.

Atari Classics is doing an IDE article in the next issue - which will go
to press as soon as Bob Woolley stops fooling around with the IDE....
The IDE interface itself is but one IC, an HC138. Plus the drive and
power. The AC article includes an updated SmartOS called SmartIDE which
is much easier and more competent than the original SmartOS. The AC
cover shows the AC 1200XL with the internally mounted IDE drive - a
nice, compact setup all under the covers. As with any 8-bit project
where you load down the address and data busses, some oddities remain,
but all in all, the IDE works just great with data rate of 180 sectors
per second on read.

Hola:

No puedo ayudarte con el hardware, pero te adjunto algo de informacion
sobre fuentes de programas para Atari en Internet.

Te sugiero que te consigas a alguien con conocimientos de electronica
(o tu mismo si eres entendido), que te construya una interfase SIO2PC
(muy sencilla y barata) que permite transferir hacia una disquetera
Atari los programas bajados de Internet.

Err, from what I understand, JTS is *not* going to be developing any
games or game systems, and AFAIK they never claimed that they would.

I think the point that BobKlaas was trying to make when he said it
would be "in our favor" is that the stockholders who were previously
invested in Atari now have a chance, at least, to recoup their losses
and maybe even make some money. If the majority of the stockholders
had preferred making games to making money, Atari would still be with
us today.

I bought Omnimon some years back. It worked pretty well. I'm pretty sure I've still got some docs, send me an SASE and I'll copy the important parts for you.

When I bought it, it came with Omniview thrown in. Omni was a separate 80 column patch on a separate PROM. You had to decide which one to put on the board, cause you only got one board.

I've seen some software 80 col patches that sorta work. They draw letters in 80 column mode and it takes a good monitor and some imagination to read.

The 1050 uses a 9 volt AC power supply, Atari part number CO17945. What
happens when you try to use the drives? Does the computer say "BOOT
ERROR", or does it go straight into Basic without reading the disk? Do
you have a boot disk?

Hello, I just replaced my fried 600xl with a 130xe, cost me $10 (that's
10 bucks CDN, $7.14 for all you americans :-)

Now I'm trying to hook it to the outside world....so....

i) The cable between the computer and the TV....is there anything special
about it or can I use a standard cable for between our stereo and your
speakers? I now have 3 Atari systems and the one cable for them all :-)

ii) Is there any way of connecting a standard RS232C serial device to the
ATARI without using that expensive interface (I forget the numbers)

iii) Anyone have details on the diskette format (I mean DETAILS, as in
directory format, everything I need to basically write my own DOS)

iv) Are there ATARI emulators out there for PC? I realize this
is kind of defeating the purpose of OWNING an ATARI, but currently I have
no way of getting stuff from my PC w/ internet hookup to my ATARI.

v) Where can I find ATARI archives?

vi) Also, I've got some stuff on tape that I'm transferring to disk.
These are the tapes that auto-load when you press Start during boot. Two
of them were just ML loaders that loaded the BASIC code so by
fast-forwarding past the loader I could just pull in the code with a
CLOAD and save it with a normal SAVE. The third one (which I want the
most) is an actual ML program. I tried copying it to AUTORUN.SYS but
nothing seemed to happen.....how can I turn this into a disk file so I
don't have to wake up when it finally finishes loading?

Thanx!

Darryl.

I assume these disk drives will work on my Atari 130XE, right? I'd be
interested in them if so. I have some Atari 5200 cartridges, maybe
you don't have some of them;
Countermeasue (Atari)
Qix (Atari)
Pac-Man (Atari)
Gyruss (Parker Brothers)
Joust (Atari)
Star Raiders (Atari)

It would be nicer to have the emulation speed be variable. Many games would require the timing to be exact, but there are other applications, such as editors or neat mathematical-thingy-programs that would like to run as fast as possible, regardless of the screen refress rate. Just my 2 cents.

Hi Chris,

In my humble opinion as a professional user interface designer, <grin>
and long-time emulator fan, it would be great if the user could choose
set either the frame rate or the CPU speed.

For example, add an on-screen palette displaying frame rate and CPU
speed, each with a lock button and slider control. If the user sets one
of the speeds, that speed remains fixed and the other one adjusts to the
maximum possible. Or, the user could adjust both rates to "dumb down"
the emulator and make it run slower than the maximum possible.

It would also be great if the frame rate / CPU rate remains under the
user's control. It's annoying when the emulator switches the "TV"
setting to Normal every time I re-boot it. (I'm using the PowerMac demo
version.)

Thanks again for a great emulator,
Tony R.

>slug it out with the soldering gun.
>Eric B.
>ebatt@wam.umd.edu

Some years back I acquired some 13 way DIN plugs and built
several ST cables; including the composite video model.

The composite video cable provides quality far superior to that
of the rf output of an STfm. This cable is not at all hard to
build (other than finding the 13 way DIN plug). Here's the pinout
necessary to complete the project.

13 way DIN 13S socket: Pin Function
1 Audio out
* 2 Composite video
3 General purpose output
4 o o o o 1 4 Monochrome detect
5 Audio in
8 o o o o 5 6 Green
7 Red
12 o o o o 9 * 8 Ground
10 Blue
o 13 11 Monochrome
12 Vertical sync
13 Ground

* Note: Older versions of the ST reserved pin 2 and pin 8, this
could be a source of trouble with some peripherals. Always, if
possible, use pin 13 for ground.

If you can't locate the DIN plug I suggest using RCA plugs on
cables (video - pin 2, audio - pin 1, common ground - pin 13) run
out through the case. This cable may be used with a composite
video monitor, any television with audio and video inputs, and
all VCR's.

Hi John,

I seem to remember that in _Mapping the Atari_, the description of the Pokey's addresses included information about how poking values there affected the sound. For example, it explained that the pitch circuit was a divide-by-n, and so larger numbers poked there produced lower pitches. It also went into detail about how poking the 'mode' byte would pair up the four 8-bit counters into two 16-bit counters, and so on.

I assume you're looking for this information to produce a Pokey emulator? If so, I can give you a little information about the waveforms. Poking an even number into the 'distortion' byte for each channel produces different waveforms:

Value	Sound	Waveform
0	white noise	pseudo-random time between pulse determined by a counter with many bits
2	harsh buzz	Don't know, sample it to find out. Timbre is consistent across all pitches.

4 'engine' sound Grinding noise in an obvious loop. Timber
different for each pitch value (0-255). Figure
out the algorithm, or sample at each pitch!

6 same as 2

8 white noise same as 0 but smaller counter, brighter noise

10 pure tone square wave, plain and simple. Don't know about
pulse width though.

12 'sawtooth' odd buzzing sound, different timbre with each
pitch, and sometimes different on the same
pitch played at different times! Used to play
low notes in Advanced Music System.

14 same as 10

When an odd distortion is chosen, no sound is made, but by poking a number 0-15 into the loudness you can move the speaker to one of 16 positions!!! Hard to believe, but there it is. That's how I was able to make the 8-bit play sampled sounds, by moving the speaker cone according to the sample values.

This is all from memory (wow, I can't believe I'm still carrying this stuff around.) Of course, this doesn't even begin to cover all the weird sounds you can make by pairing up the voices, messing with the sound generator's input clock, etc etc.

Good luck,

Tony R.

>Any other ideas?

I don't know if it's in there already, but perhaps the capability to use
the CTS line on the serial port for the SIO Command line. I'm making a
SIO cable to connect my Mac up. Though a Mac<->RS-232 cable is quite easy
to get, the Mac serial port has only two handshaking lines. One of them
is an output, and is usually connected to both DTR and RTS, while the
other is an input connected to CTS. These are the fundamentals you need
to hook a high-speed modem up. But there's no Ring Indicate connection,
which is what's used in the traditional SIO2PC cable. The only input I
can use for Command is CTS.

I'd love it if you could add the ability to use CTS, because I'd like to
try running APE under SoftWindows.

-
- Hmmmm. A "Walter/Wendy" Carlos sort of thing I'd imagine.
-
- Wendy Carlos (formerly Walter) was the Moog synthesizer
- artist responsible for "Switched-On Bach" and other works.
-
-
- Uncle (formerly Aunt) Fester

I told my friend about this, he said "Bullshit" but I told him to go
work. That's what it means. If you look inside the gatefold that MULE
comes in, Dan looks a little shifty around the eyes, he's the only one
not looking at the babe.
Also, speaking of Walter/Wendy Carlos, I have "Walter Carlos ...By
request." Mastered off my record onto a CD-R. It sounds better than
you think, not many scratches and pops. I threw a few other Carlos
songs on there to fill out the 74 minutes. Anyone interested??

->
I have the documentation for omnimon XL (very similar) Online at my
homepage http://mars.superlink.net/scharles/
Sounds like you have the bank select second generation omnimon for the
800 series. The switch works like this: In one position the Omnimon is
invisible to any program. You can't enter it in this mode. In the next
position up or down from that, you press and hold OPTION and hit RESET
or SELECT and hit RESET to enter the resident monitor. If you type "?"
once in there, it should give you an on line help menu. If the text
flips upside down when trying any command, flip the switch to the LAST
position. It's a "BANK SELECT" Machine Language Monitor! 8k in 4k of
space!
If you get bored using it I would like to get it from ya. I have
omnimon XL but I need the 800 version also.

-> Cyrus
-I bought Omnimon some years back. It worked pretty well. I'm pretty
-sure I've still got some docs, send me an SASE and I'll copy the
-important parts for you.
-
-When I bought it, it came with Omniview thrown in. Omni was a
separate
-80 column patch on a separate PROM. You had to decide which one to
put
-on the board, cause you only got one board.
-
-I've seen some software 80 col patches that sorta work. They draw
-letters in 80 column mode and it takes a good monitor and some
-imagination to read.
-
-Nick Kennedy (the SIO2PC guy)
-300 South Vancouver

-Russellville, AR 72801
-
-Hey, have you ever heard of "The Pill"? A guy gave me a bunch of
Atari
-stuff including The Pill, which is a cartridge with a toggle switch
on
-top. What is it??

"The Pill" was a unit that if you got a cartridge image binary Saved,
you loaded it up with the pill installed, flipped the switch, and then
hit a key and it ran the cart as if you still had it.
It doesnt work for bank select carts though. I use mine for a
different function; when I enter Omnimon (see above!) I flip it first
and it will protect memory locations $8000-$BFFF from being wiped.
Some software companies, in an effort to combat use of omnimon to
pirate their software, located critical code in the $BC40-$BFFF area
(default screen memory w/o a cartridge installed.) Flipping the
switch on the Pill and THEN entering Omnimon perserved the code there
to puruse at will.
The Pill is of limitied use if you don't need to do either of these
things. The only other thing I can think of is if you are protoyping
carts, you can load your code, flip the switch, and run it as if it
were a cart, it emulates a cart in every way except bank select.

Did I help anyone out???

1213. Wanted: Clowns & Balloons for Atari 8-bit

Newsgroup: comp.sys.atari.8bit

From: steven@rain.org
Message-ID: <4um6j9$94t@news.rain.org>
Source record: 81276
Cross-posted to: comp.sys.atari.8bit,misc.forsale.computers.other.software

I am posting this message for a friend without his own Internet account.

Having recently acquired an Atari 130XE computer and 1050 disk drive,
I am trying to find one Atari 8-bit game I remember enjoying a long
time ago -- Clowns & Balloons.

If you have this game for sale at a reasonable price (or know of a
company where I can find it), please let me know. I have not seen it
at American Technavision or Toad Computers.

Oh yes, to be legal I guess I must state that it has to be an ORIGINAL
disk that will work on a 130XE/1050 setup.

Please send e-mail.
Thank you,
Randall

Hi XL-Freax,

I am a coder on this small powerful machine... if you are interested
in some of my products then please contact the homepage of marek...
http://www.uni-karlsruhe.de/~Marek.Tomczyk/
(Atari 8-bit resources)
and klick the the demo-corner where you can find some of my
creations...

it would be nice if someone could test them on non-PAL machines coz. i
code on PAL-machines and i have read a news about problems with
non-PALs...

following dentros are avaible:

-CARPE-Dentro: my first "real" demo, not just "abbuc-title-dentros"
contains: fire-effect, manga-rubber-picture in about 256 colors,
master-of-the-lamp-styled flight, fast-shade-bobs, raytraced logos in
256 colors (with cinema 4d on 40mhz amiga 1200)

-4k-Dentro: the first dentro in the series of K-Dentros... less than
4k and contains:
-several ways of fire-displaying
-rotating-big-scroller
-shitty sound...coz. i didn't initialised the pokey correct (i forgot
to put $03 intro $d208)

-8k-Dentro: another one from the K-series:
contains: -full-masked sinus-dot-plotter with background grafix
-morphing-flying-chars
-nice pegasus-soundtrack

-16khiptro: the newest one... contains two effects:
-first HIP-Picture in the world:

what is HIP: Hip stands for Hard interlacing picture and is a new way
to display pictures on small atari in the future:

Resolution: 160x200 Pixels and with minimum 30 shades in one
scanline!!!! forget apacview! it is amazing believe me...

credits: HARD Software Hungary (Tamas and Sanyi) for discovering and
convertion-algorithmus....and to JAC! for visdom II-demo (for
inspiration)

-fire-caleidoskop with burning letters... (as you can see i am a
fire-fan...)

upcoming future products:

-my new Trackmo called "HyPeRiOn" which will be released on the JHV
1996 of ABBUC (Atari Bit Byte User Club) e.V.

-HIP-Converters. they are avaible for following systems:

-Atari xl
-Amiga
-Atari ST
-MS-Dos
-Unix

coz. you have to convert pictures (esp. gif, iff, ...) into bmp-format
for the converter...
for infos leave me a message or better send me an email...

Bye HeAvEn

ps. don't give up this powerfull machine...

>
>Mr. Entropy

I've got a bit of bad news for you. You can't hook a 130XE up to a SC1224. The SC1224 is an RGB color monitor and the 130XE needs a COMPOSITE color monitor. The two are so fundamentally different that working up an adaptor is cost-prohibitive.

I found an old Commodore 1702 color monitor that works very nicely with my Wooley Clearpic modified 1200XL, although you will have to fashion a cable.

Hope this helps...

I would also like to see some kind of on-screen indicator (maybe a palette
or something) that would indicate the names of the disks and cartridges
currently "inserted" in the emulator. After all, on the real thing (at
least after the 400 and 800), you can see what cartridge is inserted and
can always pop the disk out to remind yourself which disk it is (instead
of going to DOS). Just a thought...

I have a little book about Atari copy protection that describes it and
some other similar products.

The Pill enables you to make "backups" of cartridges to disk and then run
them through a menu program with The Pill cartridge inserted. The switch,
if I'm remembering this correctly, allows you to defeat the
copy-protection built in to some cartridges, where it tries to write to
it's own address space. If the cart can write to the ROM address space, it
assumes that something is up and won't run. The switch on The Pill locks
the RAM that the copy resides in and fools it into thinking it's actually
ROM.

marksim@bitstream.net

1226. Info on OSS' SuperCarts? (To Bill Wilkinson)

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-12 00:00:00 UTC
From: mas@rimmer.ngdc.noaa.gov
Message-ID: <mas-1208961028330001@news.boulder.noaa.gov>
Source record: 81289

Its good to see Bill's name here in this newsgroup. While you're here could you shed some light on a once well kept secret (or at least perceived secret)?

Years ago when the OSS SuperCartridges came out (Action!, BasicXL, Mac/65, etc.) you briefly explained how the bank switching worked. I seem to recall that you didn't want to give too much detail on the inner workings of these cartridges. I'm don't remember the exact reason why you didn't want to go into great detail, but I can understand the desire to keep trade secrets secret.

Now several years later, its almost impossible to purchase these cartridges (I held onto mine and just recently purchased Mac/65) and as I understand it they aren't even being made any more. I don't know the legal documents governing the transfer of the intellectual property from OSS to FTE (whom now owns the rights to much of OSS' software by my understanding) but if it is possible could give a more in depth description of the inner workings of these cartridges?

I would also like to hear some stories about the evolution of the programs and the early history of OSS and Atari. Hopefully somebody could capture these stories and, with your permission, put them up on their web site somewhere.

Thanks,

-Mark

From: dh395@cleveland.Freenet.Edu
Message-ID: <4unnau$sma@madeline.INS.CWRU.Edu>
Source record: 81290

Can the ROM in the XE supercart (Flight SImulator II) be replaced
by a 27c256 eprom? I would like to make my own super cart and
seperate switching logic/rom on this carts seems pretty
convienent.

Also, once the cart is inserted, is there any way to disable it
by doing something with portb, etc? I don't have any documentation
on these registers so it might be possible?

If its not, I also noticed that if a remove a cart while the atari
is on, the address range the cart was in still behaves as if it
was ROM, even though its gone. Can this be restored to ram if
the cart has been removed?

Thanks

Steve

The Atari 400 can be expanded to 48K with a kit. B&C computervision sells it for $14.95 and you get to solder about 4 little wires. It worked great on mine.
B&C is at 408-986-9960.

> the inner workings of these cartridges. I'm don't remember the
> exact reason why you didn't want to go into great detail, but I
> can understand the desire to keep trade secrets secret. I don't know that we were trying to be secretive. I think
it was partly because we used a couple of different schemes
and didn't want to try to guarantee which scheme a given
cartridge was using. The "trick" to their use was no trick
at all; it was built into the Atari cartridge slot.

There's a line going to the cartridge slot that "decodes"
address $D5xx. That is, anytime the program accesses memory
in the range from $D500 to $D5FF, that line goes "true".
So naturally we (and then later ICD and then later ICD/OSS)
used address in the $D5xx range to "trigger" certain actions.

It's been so long, now, that I don't remember all the details,
but the idea was that we divided the 8KB address space up into
a pair of 4KB chunks. When the cartridge was "active", one
of the chunks (let's say $A000-$AFFF, though I might have this
backwards) was ALWAYS "there". That is, the code/data in that
memory range was constant.

In the other 4KB chunk ($B000-$BFFF?), we actually had our
choice of THREE different 4KB blocks of code/data. (That is,
there was 12KB that was subdivided into three blocks of 4KB
each.) We "bank selected" between these different blocks.
(NOTE: This is essentially identical to how the 130XE bank
selected its RAM, except that it used the parallel port--what
had been joystick ports 3 and 4 on the 800--to do the selections
instead of a "custom" port at $D5xx.)

Anyway, the way the software worked (and assuming I have
the addresses right) was something like this:

The "core" routines were ALL located in $A000-$AFFF. Let's
say the compiler (for Action!, which was only 5KB in size)
went from $AC00 to $BFFF, IN BANK 1. Then maybe the editor
(also about 5KB in size) went from $A800-$ABFF (in UNbanked
memory, remember) and from $B000 to $BFFF IN BANK 2. Then
maybe the monitor was in BANK 3. Et cetera. So as the
cartridge changed "functions", it simply changed banks.
The common way to do it was to call a routine in the "fixed"

area that changed banks and then jumped to the actual routine
in the banked memory.

Action! really was structured PRETTY MUCH this way, which is
why a handful of people were able to rip it off to disk. I
guess they simply "simulated" the bank changes by loading
a new chunk of 4KB into the appropriate addresses on each bank
change. It's much slower than the cart, because of the
need to copy 4KB chunks so often, but it works.

BASIC XL and MAC/65 weren't NEARLY so well organized. We
tended to group their code by function. So, for example,
an "IF" statement might be processed in BANK 1 whereas a
"GOTO" might be process in BANK 2. That means you might be
changing banks on every statement (and, if heavy string
expressions--just to make an example--were involved, perhaps
several time in a single statement). You COULD use the technique
of the Action rip-offs, but the result would be something MUCH
slower than even Atari BASIC, so why bother?

FINALLY, the "SuperCarts" had one additional nice feature:
they could turn themselves off. When a cartridge is "off"
(or removed), then the RAM at the same address space ($A000
to $BFFF) is accessible. We put DOS XL in that address space,
as did ICD and SpartaDOS. When the cartridge called DOS,
it actually called a little "stub" that was left (down near
LOMEM) which turned off the cartridge and called "up" to the
DOS. When the DOS returned, the cartridge was turned back on.

I'm sorry I don't remember the actual address in the $D5xx
range that controlled the various functions (and, as I said,
there were AT LEAST two variations--more, I think, after ICD
took over). I DO know that all the carts that pre-ICD OSS
produced never looked at the upper 4 bits of the lower address
byte. That is, assume that reading address $D501 would turn
on the cartridge and enable bank 1 (I think this particular
address I am remembering correctly). Then so would reading
address $D511, $D521, $D531, ... $D5F1.

I VERY VAGUELY recall that the two decoding schemes we used
went something like this:
VARIANT 1: $D501 -- on, bank 1
$D502 -- on, bank 2
$D503 -- on, bank 3
$D504 -- off
VARIANT 2: same, but $D500 was "off".

BUT as I said, it has been so long I really can't tell you
whether I remember correctly. If anybody happens to have
the docs still lying around, perhaps they will correct me,
please.

>
> Now several years later, its almost impossible to purchase these
> cartridges (I held onto mine and just recently purchased Mac/65)
> and as I understand it they aren't even being made any more.
> I don't know the legal documents governing the transfer of the
> intellectual property from OSS to FTE (whom now owns the rights
> to much of OSS' software by my understanding)

Yeah, Mike Hohman owns it all now. I have no idea if he
is interested in producing a limited quantity of cartridges
now. Or if he has any still for sale.

With the drop in price and increase in capacity in today's
EPROMs, it would be possible to produce a cart that had
ALL the old OSS products in a single package. You could
either use extended addressing or a switch on the cartridge
to select WHICH product was in use at a given time.

The expensive part is getting the printed circuit boards
made. In limited quantities (under 100?) they might easily
run $10 to $20 each. It might cost as much as $40 or $50
to make a cartridge such as I just proposed. Quantity 100
means Mike would have to come up with $4000 or $5000 cash.
And as altruistic as he might be, you can't expect him to
do it completely for free. If __I__ were in his shoes, and
__if__ I wanted to spend the CONSIDERABLE time and energy
needed to do all this (don't forget about printing manuals
and answering LOTS of questions and....), I would probably
want to charge about $100 each for these MEGA-superCarts
AND I would want to have at least $4000 cash-in-hand (in the
form of deposits?) before I even started. And even then it
might not be worthwhile, since I might net nothing at all if
I couldn't sell the rest of the production run.

>
> I would also like to hear some stories about the evolution of
> the programs and the early history of OSS and Atari. Hopefully

1235. Jupiter Mission at Yogi's

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-12 00:00:00 UTC
From: bwillard@mindspring.com
Message-ID: <bwillard.349.001C861D@mindspring.com>
Source record: 81298

I have uploaded Jupiter Mission 1999 to Yogi's FTP site at ftp3.cyberspy.com. I son't know when he will make it available, but it was one of my favorites. It needs a translator and BASIC, but don't let that fool you. It's on four disk sides and is a real challenge.

I am glad I decided to upload it, as when I tried to read the first disk, I kept coming up with bad sectors. Since I hadn't remembered this being copy-protected, I did some cleaning of the disk and was finally able to read it. These disks are getting old, and if I'd waited much longer I may not have been able to copy it. Now I have a backup copy and others will get a chance to see it too! That's why I really appreciate these FTP sites.

There was another couple of games in a series I used to have. I don't remember the name. I remember what it looked like, but I'm afraid not well enough to describe. It was a role playing/adventure game that ran in BASIC, but only Rev. A BASIC, not Rev. C. I'm not sure about Rev. B. I think these were the only programs I ever saw that had this restriction. It did not need the translator and would work on an XE if you plugged in a Rev A cart. Anyone have any idea which games I am talking about?

Bruce Willard bwillard@mindspring.com

I'm sorry I missed the original post, but perhaps I have something to offer. If I read this right, someone's thinking about puting the old Atari mags on the Web? If so, I have access to a potential gold mine.

My father has all of the STart magazines (with the exception of two early ones: issues one and three, I think) and a whole box of the old Antic mags, including all the ones that contained the Atari ST section (precursor to STart). The disks for all the STart mags are still in a disk case, and most should work, so it might even be possible to put those old programs on the Web. It might not be entirely legal, but who's to argue? It'd be a shame for all of that excellent software to disappear. You would, of course, have to be judiscious in putting former commercial titles up. Anyway, STart never really owned all of those programs. I know for a fact that they never payed for the programs published in the last half-dozen or more issues of STart; they still owe me a couple hundred dollars.

If the person who's doing this project would like these magazines and disks, I'm sure my dad wouldn't mind unloading them.

Regards,

Tom

Any analog monitor that can sync to 15.75kHz will work; the NEC 3D is the only one I know by name, but there are several others that were made by Princeton, Sont, and Acer, to nam a few. As far as I know, there are no VGA or better monitors still in production that can sync down to 15.75kHz (31.5kHz is the lower limtie for VGA), but rebuilt and used multisync monitors that work with the ST (and might also with the 800-series, with appropriate cabling) are still around.

Followups redirected.

Some programmers were cheating, and just as they used illegal OS calls, they used parts of the basic cart also. One way to fix this is if someone can get me a basic REV "A" image, there is a way to append it to dos, and we can run those old games. I had to do that in the 80s when I cracked "hunchback". It required BASIC and I put it at the end of the binary load.

A couple years back I saw an article in some game magazine about an
updated version of M.U.L.E. being vetoed by Danielle, who still had rights
to the game. The article noted that she had been male and named Dan
Bunten when she wrote the game.

The veto? It seems the company proposing to do the new MULE wanted to
Nintendoize it. Danielle didn't like that idea one bit, so she canned the
proposed game. For which I say more power to her!

Umm well, there WAS a Nintendo Version. Although I myself have never seen
it, a good friend of mine who I used to play M.U.L.E. on the Atari did play
it. He said it was "not as good".

(I wonder if they landed on "Planet Odnetnin"?)

There was a bug in the runtime package. The last two bytes which terminated the "compiled" program were incorrect. Just compile your program then change the last two bytes using a disk editor. I forgot what the correct code was (I done this nearly 10 years ago), but I just copied them from an existing binary executable file. The program I worked on was a disk editor, and was released into the public domain.

That's the problem with Nintendo ports of old Atari games, they use cartoon graphics and nonsense like big bosses which hardly adds to the gameplay. I seen MULE for the NES in a magazine once. Now if I really wanted that game, I would get the one for my XE(why not, wasn't the XEGS selling along side of the NES...though not in mass numbers though) :)

BTW, What's Danielle doing lately? Last I heard of her as an article in Game Developer which I barely read since being in a store and all.

The Nintendo version has pretty much the same gameplay, but the sounds and graphics are not as good as the Atari 8-bit version and don't seem to "feel" right.

I'm pretty sure the article in question was in Computer Gaming World a couple of years back. I recall that the company that was trying to get Bunten to do the sequel wanted to put some sort of wargames element into it.

I'm sure I've got the article around here somewhere, but I'll probably never find it. Wish those guys'd put out a big index!

I used Omnicom for a few years. It also allowed you to run telcom session in 80 column mode. It worked very good to log into our UNIX machines. I could use a full screen editor (such as vi) with no trouble. Reading the characters was a little 'challenging' since they were all 3 x 7 pixels. Hard to tell the difference between upper and lower case sometimes.

The Pill was some kind of device to allow copying of copyrighted software as I recall. Never had one, so I don't know how it worked.

I have a good amount of hardware and software I would like to get rid of.
I'll take ANY REASONABLE OFFER. This stuff has to go. I'd like to sell it
as one lot, but if you see something you really want, make me an offer.
Like I said, it has to go!!!
1020 color plotter with power supply
1030 modem with power supply
1027 printer
800xl computer
800xl computer with 256k
400 computer
2 1050 disk drives
Zenith green screen monitor (12 inch??)
MPP interface (allows use of parallel printer)
Many connecting cables, etc

Software:
Microfiler (ctg software) complete in box
Print Shop and Print Shop companion, complete in boxes
B1 bomber game
7 cities of gold game
HomePak (combo database/commo/word proc)
Timeworks (data manager)
Codewriter (a/r and a/p program)
Tail of Beta Lyrae game
Sands of Egypt game
Temple of Apshai game
Billiard game (ctg)
Movie Maker (new, in box)
Video Title Shop (new, in box)
Synfile database program
Visicalc spreadsheet program
Box of assorted disks with many other programs, including disks from Antic
magazine, etc

All was fine when taken out of service a number of years ago. Like I said,
this stuff MUST GO, so I'll take any reasonable offer on it. Please let me
know via E-Mail.
KenN2SQW @ AOL.COM
Thanks, Ken

I replied to a note in the Mac newsgroups about this guy, not saying
anything terribly inflammatory other than mentioning his frequent
hit-and-run postings in c.s.a.8 asking $100 for $25 hardware and justifying
it by saying it's "originally $599" or something like that.

A couple of days later, I have a reply from Ortman in e-mail, sent to
about seven people, cc'd to three postmasters (not including Netgate's).

This guy was doing all kinds of posturing and chest thumping, talking about
the penalties for libel, yadda yadda yadda...

Whatever.

Yeah, it can be done. However, using the 400 keyboard is an exercise in
masochism. It may be worth the $25 to buy an 800 instead which is ready
to play games requiring more than 16K.

I guess I have to put my two cents in here..... The IDE interface on
many of the OLDER drives may be a problem, but I have at a Seagate,
Conner, Western Digital, Maxtor, Quantum, and SyQuest EZ135 removable
all peacefully getting along (not all at the same time - in pairs). The
newer BIOS versions can see past 1024 sectors just fine, thank you.
Considering the cost of my Adaptec SCSI card, I'd go with the IDE
anytime. Considering the super simple drivers needed on the 8-bit, it
is the best all-around choice on our side of the fence, too. The very
factors that cause problems on some systems give it a substantial edge
on the Atari, actually. You can run the thing off of 512 bytes of
code..... Try that on a SCSI!
Bob

What I meant is that the company in question wanted to bring out an
"updated" version for the PC. It was going to have all sorts of silly
things slapped on in an effort to make the game attractive, a phenomenon
often seen in Nintendo games.

1265. Atari machines wanted to buy

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-14 00:00:00 UTC
From: ultm8info@aol.com
Message-ID: <4us8hs$h2k@newsbf02.news.aol.com>
Source record: 81328

Hi--I'm looking for 2600, 5200, and 7800 Atari machines in good shape.
They must be in working order--If you have a list of games to sell that
would
be great, Thanks

I have a 32k Mosaic board for sale... See attached
BEGIN -- Cut Here -- cut here
Here is a listing of some of the computer stuff that I have to dispose of. If you are interested, E-Mail me at rsdean@accessnv.com or at the Ground Zero BBS (Gunner) at 702-435-6782 FNET
Node 189. Everything works and has it's manual unless otherwise noted. You pay shipping. Money order up front required. Some negotiation possible for LARGE purchases.

FOR SALE

ATARI ST - HARDWARE

SF 354 SS/DD Disk Drive-- $10 (2)
ISAC High Res Graphics Card (Mega ST) ----------------------------$100
520 ST (Wounded, good for parts or repair only) ---------------------- SOLD
IB Drive 5 1/4" Floppy for DOS emulation ---------------------------- $20

Migraph Hand Scanner w/Touch up software ------------------------- $75
Super Charger w/MSDOS 4.01 -- $75
ST Pictascan Scanner (mounts on DM printers print head) ----------- $15
Computer Eyes ST (Color) --- $50
TOS 1.2 six chip set --- $10 HOLD
1megx8 DRAMS (16=2megs if I remember right) ---------------------Make Offer
256k sims (16) --Make Offer

ATARI ST - SOFTWARE

Calamus 1.09 -- $35
Calamus SL -- $100
Calligrapher Gold --- $ 50
Font GDOS --- $ 5
Word Perfect Atari -- $25
Mean 18 Ultimate Golf --- $ 2
Timeworks Desktop Publisher ST ------------------------------------- $25
Timeworks Data Manager ST -- $10
Timeworks Word Writer ST --- $10
Fleet Street Publisher v3.0 -- $25
Image Copy 4 -- $20
Mercenary - the second city -- $ 5
Label Master Elite -- $10
Dbasic (very fast basic programming language) w/manual ------------- $10
Teacher's Pet (grading & student tracking program) ------------------- $10
Sim City --- $10
Harrier Strike Mission (doesn't work w/tos 1.04) --------------------- $ 1
ProCopy v1.3 (no manual, you don't need one)------------------------- $ 1
Shadow (background file transfer for Flash!) ---------------------------- $ 1
GFA Basic Compiler w/manual & GFA Basic manual ------------------ $10
Degas Elite --- $10
Music Studio 88' -- $10
Atari 1st-Word (Manual on disk) ------------------------------------- $ 2 (2 copies)
Universal Item Selector v2.01 (no manual) ------------------------------ $ 2
HabaView (Information manager) ------------------------------------- $ 2
HabaCom (term program) -- $ 2
Haba Solutions - How to write your own will ---------------------------- $ 2
Haba Solutions - How to write professional business letters ------------ $ 2
Speller Bee (Talking Spelling program - Preschool to JrHi) ------------ $ 5
Typing Tutor Plus Word Invaders --$5
Read & Rhyme (age 5-10) -- $ 5
Real Original Atari Language Disks!!! ---------------------------------- $ 1 (5 of em)
Mission Genocide --- $ 5
Masters of the universe (never opened, still shrink wrapped) ------- $ 5
Revolver (memory swap utility) ------------------------------------- $ 5
Auto Duel (car wars) --- $ 5
Puffy's Saga (won't run on my TOS 1.04) ------------------------------ $ 5
HagTerm Elite (Term Program) -- $ 5
Super Quintet (Bubble Ghost/Warlocks Quest/Chamonix Challenge
Passengers on the Wind 1 & 2) -- $ 5
Star Glider (doesn't run on my Tos 1.04)------------------------------- $ 1

Gauntlet II ---------- $ 10
Epyx Art & Film Director (3disks No manual) ---------- $ 3
Marble Madness (2disks - no manual)---------- $ 2
Moebius - the orb of celestial harmony ---------- $ 5
Neodesk v2.0 (I think 2.05 is on the disk) ---------- $ 5
Turbo ST software accelerator ---------- $ 5
Diamond Back hard drive back up software v1.0 ---------- $ 5
Diamond Back II v2.3---------- $ 15
Thunder! Spell Checker ---------- $ 5
DC Utilities v2.0 ---------- $ 5
Epyx World Games (2 disks, no manual) ---------- $ 2
Jewels of Darkness (won't run on my Tos 1.04) ---------- $ 1
Atari ST Home Accountant ---------- $ 5
Longevity (Health monitoring stuff 1 disk, no manual) ---------- $ 2
Star Fleet 1 (1 disk, no manual) ---------- $ 1
Onmitrends Universe II (3 disks, no manual) ---------- $ 3
dBMAN V (dbase III + Clone) ---------- $ 25
Seurat v2.0 (paint program - DOCS on disk---------- $ 5
Functionz (function key labling software I holders)(unopened) -------- $ 5

ATARI CLASSIC HARDWARE

Mosaic 32k Ram board ----------$10
1027 Letter Quality Printer no power supply ---------- $ 5
1027 Letter Quality Printer no power supply (untested) ---------- $ 5
2 1050 Disk Drives w/ Happy Enhancements (sold as pair only) ----$150
2 1050 Disk Drives w/ Duplicator Enhancements (sold as pair only)$150
Atari 400 w/32k & full stoke keyboard (Collectors item)---------- $50
Atari 800 ---------- $ 40
Atari 800xl w/ Rambo 256k upgrade ---------- $ 75
Ghost Cart (not sure if I can find the software) ---------- $ 5
Big Blue thermal printer w/Atari interface ---------- $20
ATARI CLASSIC SOFTWARE
Antic Magazine w/disk March 87 Volume 5 #11 ---------- $ 1
Antic Magazine w/disk April 87 Volume 5 #12 ---------- $ 1
Menu Writer (write executable disk menus for your PD disks) ----- $ 1

IBM COMPATIBLE HARDWARE

Bondwell Deluxe joystick adapter ---------- $ 5
Connor 40meg IDE HD ---------- $25
101 Key keyboard (works, but filthy, need GOOD cleaning) -------- $ 5
Citizen MSP-10 Printer (needs repair 9pin) ---------- $ Free
Star NX1000C Color Printer (Need Repair)---------- $ Free

DOS SOFTWARE

Starbridge DOS ----------$ 1
Penthouse PC Calendar ---------- $ 5
Word for Word (Converts between many WP formats,no manual)-- $ 5 (2 sets)
Framework II (No manuals % 1/4") ---------- $ 5
dBase IV v1.0 (Disks only) ---------- $15

dBase IV v1.1 w/manuals - Complete ---------- $75
dBase IV v2.0 w/manuals - Complete---------- $100
Alpha FOUR relational Database for Non-Programmers ---------- $50
QuickType (5 1/4") ---------- $ 1
Quicken v5.0 (DOS)(still has registration card) ---------- $20
Quicken v4.0 (DOS) ---------- $15
Central Point Anti-Virus for DOS v2.0 ---------- $20
Stacker v3.0 for Windows & DOS ---------- $15
Lotus Magellan ---------- $25
The complete PC Tutorial (5 1/4"disks & Cassette tapes) ---------- $ 5
IBM DisplayWrite4 With Micro tutor Training Guide/software ------$20
WordPerfect 5.1 (3 • & 5 1/4 & work book) ---------- $75
Winning Word Perfect 5.1 in 5 hours Book & software ---------- $10
SmarTerm 220 vt220 Terminal Emulator ---------- $20
Cliffs Study Ware for Algebra I ---------- $10
Cliffs Study Ware for Chemistry ---------- $10
Cliffs Study Ware for Biology ---------- $10
Ashton Tate's Applause II Presentation Graphics ---------- $25

1267. XL-it! 0.15 available

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-14 00:00:00 UTC
From: Markus Gietzen <iig05-1@htw.uni-sb.de>
Message-ID: <3211ABE0.3935@htw.uni-sb.de>
Source record: 81330

```
XL-it! version 0.15 is available from this site:

"http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html"

New features:

- Trainer-Maker-Assistent
- '=' key fixed on US-keyboards
- Sound-mixing is disabled whenever a program doesn't use sound
- PM overworked
- faster custom-chip handling
- ALT/ALTGR is now used for fire (public demand)
- SHIFT F8 used to exit the emulator
- 130XE emulation is back
- better SIO emulation
- improved sound-emulation
o FASTER (nearly no speed-loss !)
o better quality
o doesn't crash anymore (nice feature ;-)
- improved screen refresh in mode 13h (FASTER)

oooh. '83. back then ALL sorts of risk upgrades were out. :)

I put one of the 64K Moasic boards in my 400. The 16K ramdisk was
pretty cool during it's time.

Hmmmm ... an 800 with 64K .. That IS a collector's item, since all the
800s I
know of had only 48k. I have one at home that I increased to 288K, but
that
mod is not for the average Atari user.

>it, a good friend of mine who I used to play M.U.L.E. on the Atari did play
>it. He said it was "not as good".

>(I wonder if they landed on "Planet Odnetnin"?)

I had the Nintendo version. It was just as good as the Atari version.
Still landed on planet Irata. They even used/emulated the same exact
Atari font. In fact, throughout the whole game, the only real difference
I noticed is that the MULEs were updated graphically on the title screen
and in the village, but not out on the planet surface. They redid them
to look a little more like the ones on the original box. They're gray/silver
w/ more detail, not just big black blobby quadrupeds.

The NES version is just fine, and it supports 4 players w/ an adapter.

Cool. Do it and let me know what you're gonna scan.

> Have you considered including Analog and the various newsprint and
> electronic magazines on your site? You could dub yours as the "complete"
> Atari magazine archive. :)

One thing at a time -- we have 9 years of Antics & STarts to scan. That will keep us busy. I'll eventually try to get permission to put ANALOG online, too.

BTW, the carts ARE still available for sale and are being supported by Fine Tooned Engineering. B&C sells them with the manuals and everything brand new! Action, Mac65, Basic XL and XE are all there! Yes, they are expensive (about 60 bucks?), but well worth the price to help keep up the support of Atari dealers such as B&C.

B&C can be reached at 408-986-9960.
(You'd think I owned stock in the company with this soap boxish reply. I just like to encourage support for the last few Atari dealers out there...
)

I belong to a very large, active PC user group. (Don't ask!) The subject of mixing and matching IDE drives was touched on at the last meeting. It seems that Western Digital drives seem to be very tolerant of other brand being mixed with them, Maxtor less tolerant, and less still for other brands.

I also bought the Nintendo version, and truthfully, after years of playing
M.U.L.E. on the Atari, the Nintendo version sucked. Timing was all off
and the music did not make it. It completely lost the feel of the Atari
version.

There is a mod to the 16K board that will give you 48K. I remember doing it
to my 400 back in about '84. Seems like there was an additional chip,
probably used for addressing you had to add along with a wire or two
from the board to the cartridge port. I'll see if I can find it and
post it. As for the keyboard, I did the majority of my programming on
the 400 and after a while you can get very accustomed to the membrane
keyboard. I actually liked ti. Of course, I also did assembly using
a 410 recorder which is incredibly masochistic.

1283. Draft RFD: comp.binaries.atari.{,discuss}

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-14 00:00:00 UTC
From: "Kyle R. Hofmann" <rhofmann@crl.com>
Message-ID: <4utbeo$si9@nntp.crl.com>
Source record: 81346
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

```
[ This is a draft version of an RFD intended to be posted to
news.announce.newgroups soon. It is being posted to the comp.sys.atari
groups for feedback before the final submission to David C. Lawrence,
the news.announce.newgroups moderator. Please give us your thoughts on
this proposal. Thank you. --KRH ]

REQUEST FOR DISCUSSION (RFD)
moderated group comp.binaries.atari
unmoderated group comp.binaries.atari.discuss

Newsgroup line:
comp.binaries.atari Binaries for Atari computers. (Moderated)
comp.binaries.atari.discuss Discussion of content of c.b.a.

Proponent: Rich Tietjens <starship@3rdplanet.com>
Proponent: Kyle R. Hofmann <rhofmann@crl.com>
Proponent: Adam B. Roach <adam.roach@exu.ericsson.se>

This is a formal Request For Discussion (RFD) for the creation of
world-wide moderated Usenet newsgroup comp.binaries.atari, and
unmoderated comp.binaries.atari.discuss. This is not a Call for
Votes (CFV); you cannot vote at this time. Procedural details
are below.

RATIONALE: comp.binaries.atari

Currently, there exists no appropriate and easily accessible medium
for the release of Atari software. There is also a growing pool of
software available for these machines which would recieve a
marginal distribution at best due to this lack of a medium.
Though FTP sites and several binaries newsgroups
(alt.binaries.comp.atari8bit and alt.binaries.atari) exist, many
Atarians do not have FTP access and the alt groups have a poor
distribution.

By creating comp.binaries.atari, a medium would be established.
comp.binaries.atari would provide a method of distribution. With
c.b.a, the immediate dissemination of new releases and bug fixes
would be possible.

This method also has the advantages of using comparatively fewer
system resources than other methods, and of keeping binaries out
of existing comp.sys.atari.* discussion groups.

END RATIONALE.
```

RATIONALE: comp.binaries.atari.discuss

The existence of a .discuss group allows the discussion of the binaries groups to stay separate from the actual binaries postings and from non-binary related postings. Without a discussion group, non binary posts related to the topic of the binaries heirarchy have no single place in which they can be discussed; instead, they are spread around a heirarchy of newsgroups, making worthwhile discussion difficult, if not impossible. This discussion group will create a proper place for discussion and comments on binary software posted in the comp.binaries.atari.* heirarchy.

END RATIONALE.

CHARTER: comp.binaries.atari

For the distribution of Atari compatible or Atari related software. This includes bugfixes, updates, and new releases to Atari computer software and software on other platforms related to Atari computers (such as emulators, disk image maintainers, and Atari to PC communication software). Software that has been posted within the last 60 days will be rejected; no reposts will be made within that time period. Non-binary or non-software submissions will be rejected.

The moderator will cancel any post which has been posted with a forged approval header.

Specific examples of allowed software include:

- Freely distributable software
- Revisions of previously released software
- Bugfixes of previously released software
- Commercial software with the explicit permission of the copyright holder

Specific examples of disallowed software include:

- Pictures, music, and other non-software binaries
- Recently posted software (posted within the last 60 days)
- "WaReZ", pirate software posted illegally without the copyright holder's permission
- Discussion of software posted to comp.binaries.atari
- Requests for software
- Reposts of software previously posted

END CHARTER.

CHARTER: comp.binaries.atari.discuss

This group is for the discussion of binaries posted to the group comp.binaries.atari. On topic posts include:

- Asking for alternate methods of distribution for a binary
- Discussion of the relative merits of a particular binary in comparison to competing packages
- Requests for a piece of software which has not been posted recently
- Requests for a piece of software which was incomplete to be mailed

Binaries, spams, MAKE.MONEY.FAST schemes, computer advocacy, and discussion not pertaining to the comp.binaries.atari groups is considered off topic.

END CHARTER.

MODERATOR INFO: comp.binaries.atari

Moderator: starship@3rdplanet.com (Rich Tietjens)
Backup moderator: rhofmann@crl.com (Kyle R. Hofmann)
Submission address: starship@3rdplanet.com

The moderator is author of a number of freeware packages for the TOS compatibles, active in the various Atari discussion groups, several fido-technology networks, and is employed in the networking industry.

END MODERATOR INFO.

PROCEDURE:

The discussion period lasts 21 days from the initial post of this RFD. If there are no major objections to the naming or placement, then the CFV (Call For Votes) will be issued, lasting for at least 22 days. Following the vote, there is a 5 day discussion period after which newsgroups that passed will be newgrouped by the moderator of news.announce.newgroups.

Followups to this post are directed to news.groups, which is where further discussion will take place. Cross-posted followups are discouraged. Please read news.groups to participate. Thank you!

DISTRIBUTION:

This RFD has been crossposted to:

news.announce.newgroups, news.groups, comp.sys.atari.8bit, comp.sys.atari.advocacy, comp.sys.atari.st, comp.sys.atari.st.tech, comp.sys.atari.programmer

Tim Irvin (ziggy29@netgate.net) wrote:

: I replied to a note in the Mac newsgroups about this guy, not saying
: anything terribly inflammatory other than mentioning his frequent
: hit-and-run postings in c.s.a.8 asking $100 for $25 hardware and justifying
: it by saying it's "originally $599" or something like that.

I did just that some time ago. I offered him around $100 for the entire package, since that's what it's worth, since it's old stuff. The 400 was worth about $100 around 1988, after being about close to $300 including the programmer package, around 1981. I remember, as I bought it for around that much back then. Oh, the memories. But of course, the keyboard click drove me nuts, so I merely disconnected it from the board, as I hadn't learned the POKE command to turn it off.

: A couple of days later, I have a reply from Ortman in e-mail, sent to
: about seven people, cc'd to three postmasters (not including Netgate's).

Same here, only I got an answer within two hours. He was blabbing on and on about how it's still worth that much, and then some. I tried a couple times to tell him the real worth, after giving him some places to sell his stuff, or at least unload it. Tried telling him about Toad and Ben Smith, as well as hamfests and fleamarkets, as well as the annual MIST AtariFest. He rips back into me by saying I'm harassing him and then some. [sigh] Figured forget it, he ain't worth it. One thing that he doesn't even bother to tell you is that they were given to him on consignment, and that he has been paying $25 a month for storage fees for all that stuff. I figured how long it was, and came up with something about 5 years ago. 5 years in storage? Eat them fees and just sell the junk, please!

[imitating Henny Youngman] Take my 400. Please! [playing violin]

If it is (and it's a BOSS site folks!) :) Why don't you just take off the individual binaries and keep the smaller ziped up versions on the site with some nice indexes to save space for more files? I really LIKE the individual files but it isn't necessary if you don't have the space. Either that or perhaps someone can donate some more space for you.. :::looking around::: :)

And/or how about offlining that allfiles.zip on Justin's archive? That'd
give you about 10 megs right there. Maybe someone could volunteer space
for that file, and you could have a "virtual" directory linked to that
(if that is possible, I don't know).

Heh. And back then, if you made a mistake and fried it, you just wasted a $500 machine. Now it makes for a pretty cheap electronics experiment. Just the same, the supply of these things will only go down into the future, so I try not do do anything terribly stupid with them even if it does cost only $20 to fix a mistake.

You're obviously unaware that "freenet" doens't mean cost-free access. It means that the users pay the costs of operations, and not a large profit to the system operators.

>>With the Internet voice phone and live video for the PC's, I think the
>>bandwith argument is moot!
>

>people's worries don't matter?

See above.

I'd also point out that, in spite of your obvious concerns that Atari binaries will somehow generate undue bandwidth problems, nothing could be farther from the truth. The largest Atari binary file I have ever seen was under 1 meg in size, and it is a complete Internet access package with SLIP stack and dialer, browser, telnet, ftp, email, and some odds and ends. Compare that to the average /game/ package for an IBM clone, running 3 megabytes and up, or Netscape, which at last count was something over 4 megs without a stack and dialer.

>>> The huge number of IBM users makes distribution via Usenet a lot more
>>> defensible. It might even save bandwidth if a large enough number of
>>> people want the files. That'll never be the case for Atari users.
>>Heck, they can go into a store and buy all the software they want! 8^) We
>>are rather limited in that respect!
>
>The technical point is that, for IBM software, distribution via Usenet
>uses less resources than distribution via ftp. For Atari software,
>it's the other way around.

I disagree. To oppose a binary newsgroup for Atari files while supporting the huge bandwidth required for PC files is a position revealing either ignorance or hypocrisy. I choose to ascribe it to ignorance; but opposing the newsgroup is a form of discrimination in either case, and does not

speak well of one's attitdue towards the democratic process. You do have the right to express your opposition; I would like to enlighten you as to the facts of the situation, however, in hopes that you may change your mind.

The fact is that Atari binaries are miniscule in comparison to equivalent packages for Microsoft-OS platforms (and even compared to Mac platforms); there are few well-maintained ftp sites for Atari files nowadays, even though Internet access for Atari users is on the rise (in a rather steep curve, in fact) rather than on the decline; and those that remain do not all have email access to files.

The bandwidth requirements for an Atari-specific binaries group can be reasonably expeccted to be below that of a single IBM-clone binary file; certainly far below (perhaps several orders of magnitude lower) than any of the alt.sex.binaries groups.

The lifetime of a binary posted in newsgroups is far shorter than that of one archived in an ftp site, but becasue of the volatile nature of software development, this is in fact an advantage; one is far less likely to inadvertantly spend hours downloading a file that has been superseded by a later release; in the case of the soon-to-be-formally-proposed Atari newsgroup, the odds approach zero, due to the nature of moderation and the proposed charter (which is now in something like its fourth incarnation).

The storage space for an archive of the newsgroup will be likewise small; a single 1 gigabyte drive will probably be far more than adequate for the next decade.

Did I fail to address any of your concerns? I'll be most pleased to follow up if I did.

Primary Atari newsgroups restored to the distribution line; this discussion concerns all Atari users.

w > Is upgrading it's memory possible?

Yes. But for many years now it hasn't been worth the effort to
try to trace down memory modules because it's cheaper to buy an
"old" 8-bit computer with full memory already in it. It's harder
to find a 48K memory board for five or ten clams than it is to find
an 800, XL, or XE for that kind of price. (Or less, as you did!)

I find a version of RAINBOW but it isn't run correctly ???
I don't know if it's the last !!!
I use the rom of Xformer but when I start RAINBOW I've got this message:
Wait for the latest version...
Thanks for your help.

Stella ?? where to find the ROM.

The following books are in very good to excellent condtion!

Used but good. Shipping might be high for multi books, I
have been using US Priority mail, 1 book $3.00

Checks take about 8 days, money orders same/next day ship.

Compute's First book of Atari $5.00
Compute's second book of Atari $4.50
Compute's third book of Atari $5.00
Compute's First book of Atari's Graphics $5.00
Compute's second book of Atari's Graphics $5.00
Compute's mapping the atari 400/800 $5.00
Compute's mapping the atari with XL/XE $6.00
Compute's Atari collection VOL.1 $5.00

Other books,

The Analog compendium $5.00
Best of Antic the Anthology $6.00
Atari Roots $6.00
Atari XL/XE users guide $3.00
The Atari Assembler $5.00
Easy guide to your XL/XE $4.00
Your Atari computer Ion poole $4.00
Dr. Wacko Atari mircle guide $4.00
Atari games and recreation $4.00

I priced them at what I thought would be a fare
price. make offer on all if you wish...

Hello everybody,

I would like to buy a Super Archiver II upgrade (or an upgraded 1050).
If anyone is interested, I will pay a good price.

Please, send a message to email:100066.1667@compuserve.com instead of
answering in the newsgroup because I don't read them everyday.

Thank you very much.

Eric.

I just looked at an Electronic Games magazine from November of 1984.
There is a profile of Dan Bunten there, including the picture from the
MULE package. Only one of the 4 software designers is looking at the
"Babe" (Maybe by 1984 standards, but not today) The other 3, including
Dan are looking at an "Arkansas Gazette" where the headline reads
"M.U.L.E. Unveiled" (The dog also appears to be looking at the "babe")

The continuing criminal investigation of Ortman/Admiral Nuguru/Starfleet, Et Al has turned up the fact that some irate customer of Terry's, who was screwed by him, hired an attorney in Terrys hometown of Decatur, Il. When the attorney attempted to press the lawsuit to recover his clients money, Terry turned his wrath on him just like he did to the others he's screwed here on the net. The attorney, un- intimidated, laughed and had him arrested! "Don't try that crap on me"!, He must have said as he dialed the local police! I got that from the State of Illinois Investigator when he called me and asked me to post this message: Don't call the State Police or the Attorney Generals office about Terry just being a jerk, (they know that), but if you've been screwed by him he urgently wants to hear from you *in writing* about what happened. They really want to grab his computers again and take him off the net, but people just want to whine and complain but won't really do anything to help themselves if it requires any effort.

So this is your challenge: If you've been screwed and can prove it, contact Rodney Miller, Illinois State Police, 2125 S. 1st, St, Champaign, Il, 61828 You may phone him direct if you wish at 217 333 1211 or Fax him at 217 333 8451 (This is the guy who took his computers and hundreds of disks of porn last time!).

The lesson here is that the authorities will take over and deal with it if you can show they have jurisdiction over the perpetrator. That means no matter where you live, you notify the authorities in the guy who screwed you's home state. Please do your civic duty, if you can help, as noted above do so.

(Would the person who hired the attorney please let us know who he is? There may be lots more business for him! Anyway some congrats!)

I have a Eudora filter set up to automatically respond to whatever he sends me. The response is pretty nasty, I'll admit, but he doesn't seem to understand anything else. (He also doesn't read the part of the automated response which reads "if you don't want to receive this message, don't send me any mail." I haven't been keeping formal count (the filter automatically trashes his crap as well as replies to it) but I'd guess he has sent me about fifty messages, each containing about 95% fabrication and 5% truth. My ISP is really PO'ed over this guy; he keeps forwarding a copy of HIS message, as well as an edited version of my automated response, to the postmaster at my site. I explained what's going on to the operators and they understand. I think today he'll be mail bombed; he forwarded a copy of his message to my postmaster about fifty times.

This guy is a waste of breath. Anyone living near this guy care to kick his scrawny little ass for awhile?

Is it possible to just use comp.sys.atari.st to discuss stuff in comp.binaries.atari? Why create comp.binaries.atari.discuss? I know I won't go looking for something in c.b.a. unless I read about it in c.s.a.st as I don't intend to poke my nose in there if I can help it. Also, does it have to be moderated? Seems like that was the cause of problems before. And then, of course, comes the issue of: do we really need this. Right now I'd say we do, primarily because there is no satisfactory ftp site. I wish we could set up a really nice network of ftp sites (one in US, one in UK, one in Germany, France, etc...) that all mirrored the complete archive. U-Mich used to do this, but seems to have gone all rough around the edges.

Source record: 81182

I'm probably re-opening old wounds, etc. but I need to know:
Most people have been positive about having an FTP depository for copyright but commercially unavailable software - HOWEVER, I belive that this means that there are a lot of people who DISAPPROVE of such a practice. I haven't heard specifically from anyone, but I do notice that the comp.sys.atari.binaries newsgroup says *NO* copyrighted software without express permission, etc. and was wondering the rationale behind it, i.e. are the moderaters/others just putting up with the archival idea because they know it's not commercially viable any longer, or do they object? It's clear to me that there are a lot of software titles that are just plain lost forever. Distributing them as widely as possible will prevent future loss.
Yes, they are copyrighted, and yes, some form of compensation should be forthcoming. However, the 5 or 6 software authors who I have been in contact with have not expressed their displeasure that the s/w is being swapped around, in fact they were all happy that people still enjoy their work. If I could get in touch with every author of every program (impossible) I would do so. I prefer the other method - if anyone objects to their copyrighted work being posted in the archive, please let me know and I will have it removed. I Will not erase my copy however. In the 80's when the platform WAS viable, it was no less illegal and most of us did it, some innocently, not realizing what <C> really means. (I did). Any thoughts?

As it stands, there currently is no repository that I am aware of that supports pictures or music files. I collected the 8-bit Atari .MOD music files, and would like to be able to trade and/or collect more titles. As far as I know, there are no copyright restrictions on the MOD and related music files because they were generally released anonymously.

A blanket prohibition on all music files to be overly restrictive. The music and picture files specific to the Atari 8-bit computers are small, hard to find, and tradeable. I would like to see them allowed. This request does not extend to .jpeg, .gif or other modern formats, nor to material that is already prohibitted from the Internet.

Please modify the proposal to allow music and picture files specific to the Atari 8-bit computer to be posted.

1323. Help! - Drive Problems

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-16 00:00:00 UTC
From: jblenkle@calweb.com
Message-ID: <4v1519$6ts@news.calweb.com>
Source record: 81186

OK, since my last post concerning my problems with my two 1050 drives I have discovered the following.

As you will remember, I could not get my 800xl to recognize Drive #2. It didn't matter what drive I set as Drive 1 or Drive 2. It would only recognize the first drive.

I've been using Atari DOS version 2.5, but I had a disk with something called SmartDOS 6.1. From the title apparently it is for Rana Systems drives.

SmartDOS does recognize both my drives although it won't read the 1050's extra sectors on the disk for disks that are formatted in enhanced density rather than single density.

Now my new question: One of my drives is a stock 1050 - the other has a U.S. Doubler - could this be causing my problem? Is there any way of getting around this problem?

Thanks

Joe Blenkle

Six months of rumaging around local thrift stores has finally
netted me a $3.95 130XE, for example, everything included! Much
cheaper than any memory upgrade. BTW, the only plausible use of
an Atari 400 that I have heard of was in a cow barn, where the
membrane keyboard kept dirty farmhands from dripping cow manure
into the keyboard. If you are not in such a situation, I suggest
simply purchasing a higher-end Atari.

It's probably just a generic disclaimer so that if anyone started
uploading things like Microsoft Office they can cover themselves.

>copy however. In the 80's when the platform WAS viable, it was no less
>illegal and most of us did it, some innocently, not realizing what <C>
>really means. (I did). Any thoughts?

That's what I thought was odd when this whole idea first started and
people started screaming about piracy. I would find it hard to swallow that
there is someone who had an 8-bit in the 80's and doesn't have _any_ pirated
files. It's probably just morality hitting 10 years too late.
You have the best idea, I think, of just putting stuff up and waiting
for the authors or copyright holders to mention their displeasure. Get ready
for the sound of an empty mailbox.

1327. Tail of Beta Lyrae (not working)

Source record: 81190

Here is my problem,

I downloaed Tail of Beta Lyrae from Yogi's site (keep up the good work Scott), I also downloaded the menu program. I created a disk image with imageman and added TAILOFBE.EXE to it. So far so good. Next I booted XF3.5 with MENU.ATR in drive 1 and my disk image in drive 2. The menu came up I selected A and up popped the game (note XF3.5 was running in 800 Mode).

Right I thought lets try it on my 130XE, the menu boots up I select A and the program starts loading once finished nothing (SIO2PC has stopped i.e. sector counter has finished). But nothing. I've also tried with the XL Fix but still nothing.

So how come it works on the emulator but not my real Atari ?

Ps. Is this the first game to only work on the emulator !!!!

Speaking of, I remember when this first came out, the ads looked too good to be true! Then I saw a review of another game called "Space Cowboy" that they panned in Analog. Turned out that the former was a bunch of small games tossed together.

What was it like to play the real thing?

Another one I saw that never appeared anywhere was from a small basement shop, it was called "F-15 Death Eagle", but I never managed to see it anywhere else.

Somebody wants an origianl
'Clowns and Balloons'.
So I got out my 'Clowns and Balloons' and as usual I want to
progress in the game better than my hand eye will go.
So, here's a cheat for 'Clowns and Balloons'. Look for
DEC $EA ($C6 $EA). There are two of them near each other.
Change to NOP NOP ($EA $EA) both of them and you can play
clowns and balloons all day.
Frank Cohen, I think he was here a while back selling his
8-bit stuff, from Univ. Virginia.
He wrote a second 'Monkeys and Balloons' for the ST, which
is very similar. It was published in ANALOG, I think.
The thing with the ST, is I could never edit a game so
I could win.
I e-mailed the person that 'C & B' is probably available
on the Yogi site.
But they probably want an original.

There is a program called DCMTOATR that is *supposed* to do this,
but it doesn't seem to work. Imageman is supposed to do the same thing.

The best way I've found to do this is to use the actual Diskcomm program
under an emulator. (It works with Xformer) Then you can undiskcomm onto
a blank .xfd.

: distribution.

You need to specify what kind of Atari software is going to be on here
(8-bit, ST, TT, Falcon, whatever). Seems one user seems to think this is
for ST stuff. I'm not even sure what format this is going to be for, myself.

And if this is for 8-bit, there's already an 8-bit binaries group that
doesn't get wide distribution.

>thankx in advance,

I am assuming you are trying to do a fast load of the file...

Here is what the .TXT files say for WARPBOOT and MENU:

WARPBOOT.ATR, is also for use with actual Ataris. Again, DO NOT use the
image with emulators. To use this image, load it as D1: in APE, and load the image you
want to boot as D2:, then turn your atari on.

MENU.ATR is for use for emulators; you load it as D1: in the emulator and
your image containing binary files as D2:. If you create a large disk, it will work with
that
also, press space to view more than the first 26 files.

Try using WARPBOOT.ATR for your real machines.

Then again, none of this may work since I haven't tried it myself!

I noticed that also. It's an old discussion and I really think the numbers were very conclusively in favor of distrubuting anything that was no longer in print and that the copyright owners didn't specifically object to.

As far as the RFD goes, I say let it be. It's a good start, and it may be impossible to create a comp.* group without that specific wording. If the group actually gets created and this becomes an issue again, we can have at it one more time... =)

The FTP site is the best long-term solution anyway. I see the newsgroup as just another means by which to get things in and out of the FTP archive.

I have been looking for a game out on the internet for the Atari 400/800 ... it's a helicopter game, black background, red bricks .. you have to fly the helicopter into a large cavern and shoot red blocks. It was a really cool game in it's time ... and I want to find out the name so bad! Does this game sound familar?? Maybe if you could list a few helicopter games off the top of your head, that would be helpful.

1352. Xformer 2.5 question

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-16 00:00:00 UTC
From: "'Djoe' L. Shippert" <djoe@u.washington.edu>
Message-ID: <Pine.OSF.3.92a.960816134851.6520E-100000@becker2.u.washington.edu>
Source record: 81215

Disclaimer:

I'm new to the group so please be gentle. Keep in mind that I did read the docs and I looked in the FAQ but either I missed it (very possible) or it ain't there or I'm doing it wrong (VERY possible).

The Question:

I'm using PCXformer 2.5 and for the most part it works great. However, some .ATR files I'm booting are programs that, on the original 8-bit hardware, required the "option" key to be held down while turning the computer on. Is there any way to simulate this?

In XL-it! 0.15 there's a run-tim switch, -nobasic, that allows such programs to be run just fine but in Xformer 2.5 I'm not seeing it.

Thanks!
-joe

1353. FS: Atari 8-bit Equipment

Newsgroup: comp.sys.atari.8bit

I have the following 8-bit equipment for sale, all is in good working order, but I don't have any of the docs or boxes....

Atari 800XL with 256k RAMBO Upgrade
Atari 1200XL (stock)
Atari 800 (48k)

Atari XF551 Disk Drive - One of the molex connectors shorts every once in a while, probably due to age.

Atari SX212 Modem

Interested parties just make an offer, I want to get rid of this stuff prior to moving later this month. Just respond here in the newsgroup or send me mail to bfurbee@tcac.com

Thanks,
Brian

It sounds as if someone has "patched" your DOS 2.5 disk; as I recall, there is a POKE that tells Atari DOS how many drives it cna look at, and it saves a little RAM if the number is set lower. It has been many years since I looked at this, however; anyone have more details?

I think this is one of the most original and amazing works of love I've
ever seen. Ok, what about Analog?!? I have some issues I could send in
to you.

Still I've always been a fan of browsing the magazines because I always
though the whole was greater than the sum of the parts. Remember all the
ads for products that may or may not have actually existed?

That is an understatement. The whole point of the new binary group would
be to give it wider distribution. Very few of the ISPs in my area, and
none of the universities I've heard of accept alt.binary- anything.

I expect the new binary group to allow both 8-bit and ST stuff, although
I am only interested in the 8-bit.

Source record: 81221

So, I posted a cheat for C & B. I got 4 games that probably
nobody has seen, for the people who want to see everything.
I don't want people to think all I do is make up cheats.
I 're-did' 4 games. C & B is about my speed. I can't take
'Tail of the Beta Lyrae' level of difficulty. Just let
me catch the balls, bounce the balls, etc.
So, my four games.
1. There was a 'Warp' game included with the ACTION! toolkit.
I made it to run without the ACTION! cart is all. It is strictly
a space blastem. Changed some colors here and there.
2. My biggest effort was a game called 'Pig'. A BASIC game
I got off a Antic disk. It was terrible, mostly slow, so
I had to do a bunch of mods to make it compile with ABC.
(Yogi don't like compiled BASIC stuff.) I'm sorta proud of
it, I think it is playable on the level of C & B.
3. I made very famous ANALOG game 'Popcorn' have much better
joystick control. The game would sorta take control of
your joystick away at the most critical times.
4. Another ANALOG game. 'Rollem'. I made the joystick
work better again, and made it into a single file as I
recall.
Hmmm. Why mention this? I think these all qualify as
pd, so I could send them to Bill Kendrick, who says he
likes to look at everything. then let him decide if
he wants to put them in the umich archive. I don't think
they're quite what Yogi's site is looking for, but also
if he wants to look.
bye

-

Actually, I am trying to get the other 2 sites removed from cyberspy,
as ALL the stuff is in mine anyway. It is on a new server now, and
there just wasn't enough HD space allocated. I would be happy to zip
it all but am not willing to use winzip 1204 times. PKzip or all
others for command prompts that I can automate do not support long
file names.

In order for the RFD to stand any chance whatsoever of passing, a
comp.binaries group must be moderated. This is one of those unwritten laws
one hears so much about. <G> For those who prefer an unmoderated venue,
alt.binaries.atari has been newgrouped (several times) and, while
distribution is spotty, is available from many sites. I can personally
assure you that the moderation this time 'round will be responsive and
active.

The discussion group, while not strictly necessary, (of course, the
whole Internet is "not strictly necessary") will help to segregate the "why
didn't my cracked copy of Lemmings get posted?" from "who has a good
routine to read the system clock?" and thus relieve clutter in c.s.a.* (at
least, that's the plan).

As for ftp sites, all I can say is, "wait until next year."

I think that it's going to be impossible to get the newsgroup approved if we allow copyrighted software without explicit permission, Yogi. It's a sad fact of life. While anyone with half a gram of sense knows you can't get permission from the copyright holder if the company has dissolved (probably 10 years ago) and they (the former company execs, that is) no longer care what happens to the software, the people who spend more time lawyerizing than thinking will vote "NO" in a typical kneejerk reaction if we allow copyrighted wares without permission. Since we need 100 more "yes" votes than "no" votes, and there aren't a whole helluva lot of us Atarians on the 'net anyhow, we can't afford to risk getting slammed with a bunch of reptilian "no" voters.

Hmmm, as long as we still prohibit MOD files (which do have an appropriate venue for distirbution), I think we might consider Atari-specific files. Technically, the "chip music" files for both the 8-bit and ST series probably could be considered binaries in that they are obviously not graphics nor text, and they aren't useful on any other platform.

8-bit graphics files are so tiny (<=8K as I recall) that I don't have a problem with that, either. ST-resolution graphics would have to be pretty special to qualify, though; 32k isn't huge but it's big enough to be a nuisance if a lot of them are posted, and frankly, while I love the systems, I am underwhelmed with most of the graphics that have been produced for it. This is a case where I think http distribution does make more sense.

Kyle, your opinion, please?

1. I think that anyone who's an officer or staunch member of a user group has to be against keeping such software for distribution.

2. There's a fine line between putting a disk on a table, saying nothing, and letting it be picked up and placing it on an FTP site. Keep in mind what FTP stands for. Also keep in mind what the law says. There are at least two sides to everything.

3. It just won't be possible to contact every author of every commercial product to get their feelings, either. Some of these people just don't want to be contacted.

4. Then there's the issue of whether an .ATR of a commercial program represents a personal archival copy. We can argue that for a couple of centuries.

Notice that I haven't contributed my feelings on the matter. That's because #1 applies to me. But, I'd be interested in following any thread that results from this discussion because I'm in the process of writing a four-part article on emulation -- to be published in user group newsletters.

This is assuming of course that people are prosecuted. And supposing
someone were prosecuted, it would become a precedent-setting case.

>3. It just won't be possible to contact every author of every commercial

I have the following:

(1) Atari 800XL, with 64KB memory
(2) Atari 600XL, with 16KB memory
(3) 1027 B&W Printer
(4) 300 Baud Modem
(5) Manuals, extra power supplies, cables, cartrides

I have an Atari 2600 and the following games:

Slot Racers
Math Gran Prix
Golf
Combat
Outlaw
Donkey Kong
Pac-Man
Home Run
Bowling
Video Pinball
Superman

If interested, make an offer. I am located in Toms River, NJ. Thanks

Hi-

One nice thing about the Atari is that good technical documentation was published. I highly recommend "Atari Technical User's Notes" (I think that was the title). It had a software section, hardware section, OS Source code, and schematics. There were charts giving the various modes of POKEY and descriptions of hardware variables. I used it a lot in developing SIO2PC. Probably available from Atari dealers such as American Techna-Vision.

Also really good is "de re Atari", which I also think is still available.

Have fun,

Nick Kennedy (the SIO2PC guy)

From what I remember, it has been a long time since I played the APX version, things were actually added for the cartridge version. But it was just cosmetic, such as it the graphics indicating which unit was attacking which seemed brighter and better defined. Just little things like that, otherwise it looked and acted the same to me.

Possibly some nuances were changed, but I don't remember any major deletions with the cartridge version.

Actually the cartridge version may have had a shorter manual than the APX version tho -- I can't even remember the manual with the cartridge.

Hello!

Very sorry to bother you all but I am in need of some colour.

I am currently running a 130XE with a Commodore 1802 monitor. Or I should be anyways. Using A standard AV wire, or the Atari connector I plug it into the back of the 1802. In the Mono port. After switching the switch on the monitor over to mono, I still see nothing. I ahve tried putting the cable from the Atari into every single port on the 1802, with every switch setting.

Now I am back to my black and white TV. Is there anyway, or particular reason that the monitor is not working with the computer?

Sorry if this isn't making much sense. Trying to do to many things at once.

I use Norton Navigator for win95 for zipping now since it can do it straight from it's file manager - any directory or such, or by dragging files or groups of files into the zip file.

I can provide any assistance - I would like to see either a master zip and/or sub zips based on subject that get updated as things are added to the archive.

1385. Serial cable lengths

From: jeking@xmission.com
Message-ID: <4v4vp5$oa6@news.xmission.com>
Source record: 81248

Whats the maximum length you can run a serial cable? I'd like to be able to run a 30 foot length to tie a second Atari into my PC's serial port, thereby allowing null modem connections.

In addition, that same cable could run into my primary Atari, thereby allowing null modems connections to the Atari.

Is 30foot too long for that type of use?

> I ejoyed playing this game on the XL...

It was also one of my favorite games. However, I never did master it. I would lose too many men when I set up forts or missions. And I would hardly get beyond a "good" rating. I'd discovered all of North America and whatnot, but was never able to satisfy the throne. I was told one of the keys in getting a good rating was to obtain a lot of gold from the natives. And even when I did that, my rating still sucked. All I would get was a good commendation on treating the natives well!

> One thing I never figured out (Yes, I owned a pirated copy!)

It did exactly that -- toggle the color. <g> It was just aesthetics, nothing more.

The game is Montezuma's Revenge, and there were a bunch of variations. There was the prliminary 16K version that you had. There was the cart and cart transferred to disk version. And there was the full disk version. At one time I thought I got close to the end, but then ran into a screen that was scrambled. Oh well. At any rate, at least two versions are in the archives now.

From: dj390@FreeNet.Carleton.CA
Message-ID: <4v5v8c$agp@freenet-news.carleton.ca>
Source record: 81126

A couple of quick questions for the general audience
(with long memories) about Chris Crawford's
classic "Eastern Front 1941" for Atari 8-bit:

1. When Atari converted the original APX disk
code for "Eastern Front" to fit on a cartridge,
was any of the play-ability of the program
lost? (Did "EF" become an emasculated "EF-Lite"?)

2. Should I expect any compatibility problems if
I run the "EF 1941" cartridge on the Atari 130XE?

You may post any responses here, or e-mail me at
"dj390@freenet.carleton.ca.".

My very great thanks, in advance, for your input.

Bob Bell

>was kind of spooky when the natives would start killing your men because
>the drums would start beating frantically...

The game was called "7 Cities of Gold". Produced by Ozark Software, and
publihed by Electronic Arts in 1984.

I ejoyed playing this game on the XL, and missed it dearly when I upgraded
to an Atari ST. The theme of exploring a world did not re-occur in games
until Civilization in 1991. Compared to 7SOG, CIV had a miniscule game-world,
and games such as CIV or Colonisation or Transport Tycoon could be greatly
improved by havving a massive game-world. If it's possible to have a large
game-world on an XL using 64K of main memory with 88K of virtual memory,
then why dont we have large worlds on today's computers?

One thing I never figured out (Yes, I owned a pirated copy!) was what the
'C' button did. I remember that it toggled the background
between black and red, but I never figured out what effect that had.

There was a sequel to this game involving Africa instead of America.
Was it ever released for the XL?

AE.

The original lock up problem, I believe, was a function of bytes being
moved while editing lines. If it was an exact multiple of 256 bytes,
then you got the lock up. Sometimes it seemed to have more to do with
Murphy's Law than a 1 in 256 chance though!

I've got both Aztec and Aztec challenge for my XL on disk (assuming my
disk hasn't decomposed like some people have mentioned).
Someday, I may get round to transfering all my XL disks and uploading
them.

I also remember on the C64 there was also a game called Aztec that was
completely different from Aztec and Aztec challenge on the XL.

AE.

What type of monitor setup do you have? Did the 800XL ever work on it?
The 800XL has no CHROMA output - the 130XE does. Could that be your
problem? You should scope the signals at GTIA pin 21 and see if you
have color signal. Know anyone with a oscilloscope?

1400. Repairing 810 disk drives

Does anyone know of a repair shop near the US east coast that repairs 810 disk drives. I purchased a complete system recently but the disk drive won't read any of the disks that were included. I'm pretty certain it's the drive though.

If you have any addresses and what it might cost please let me know.

This is my attempt to recapture my roots. My first computer was a 400.

(Uncle Fester thinks there's 12 bytes difference between A
and C Atari BASIC.)
Uncle. I have all three and just compared them. I've done this
before. I believe B is a re-compile. I know there are thousands
of byte for byte comparison differences. Also there's 1000s of
differences between A anc C. C is a 'patch' job of B. There
are only 12 bytes difference. (I still feel B is the best
if you want to program in Atari BASIC, because it hangs the
least and messes up the least.)
So, what Yogi and the guy with the only runs on A BASIC
program say is quite possible, probably correct, definitely
could be true.

Does anyone remember a great game called Monty? I have a binary load version (only available via a bootloader) called Preliminary Monty 16K. It's similar to Pitfall or Miner 2049r, where you go through screens in tunnels with spiders, rolling boulders, occasional gems, and colored keys to unlock colored doors. There are multiple levels of the game, with each level comprising some 30 or more screens, half of which are in the dark (only the baddies can be seen, not the ladders or floors.)

It's great that I now have a 130 and can play it again. It would be wonderful if someone with Ape or SIO can drop it into the ftp archive so others can play it also.

Don't misunderstand the archive I want to have - I DO WANT everything, even if it's terrible basic compiled stuff.

At any rate, what I DONT like about compiled basic is when I used to BUY software in the 80's when I was 15 and made $30 a week I used to get REALLY pissed off when I would spend that money and get compiled basic, magazine level software. No one then accepted returns on software. Thats why I put "compiled Basic crap" on some of the descriptions. (Which has since been removed). Not to knock the ABC compiler (Hell I used it to compile the Broderbund cracker I wrote), but it was an attempt to add some humor to the list. At any rate, I have since revised my opinion that General Masters Corp. released the WORST 8 bit software, even more so than ANY compiled basic stuff I've seen.

>the alt.sex.binaries groups.

That's irrelevant; posting a 1-K message instead of emailing it to the
only person who's interested uses a trivial amount of bandwidth,
almost all of which is wasted. The key issue is how many people at a
typical site want the group. The larger the number, the more likely
Usenet is the correct distribution mechanism. The smaller that
number, the less likely.

Rev B is the version in the 600XL/800XL. The XE's had Rev C. From everything I've seen, Rev C is the one that locks up least. Rev A was bad, but there was some kind of screwup with Rev B that made it lock up even more than A.

I think your wording may be taken the wrong way, but if I read it
right, you are saying that General Masters Corp. made the worst software
EVER on the 8-bit. If so, I heartily agree. I was truly amazed lately
with their programs in the archive and truly grateful I never bought
one of their games!

(Maffia wants 8-bit sound and graphics files allowed in proposed
comp.sys.atari.binaries. Tietjens says maybe ok or something.)
I'm opposed to sound files and picture files, but really don't
care. I could see the binaries group get a bunch of tiny
picture and sound files. Hmmmm... I go to the midi binaries
group sometimes, it is a mish-mash of requests and binaries.
Sorta a prototype for the proposed atari. binaries. Except
Tietjens and Hofmann are looking for more 'discipline'
. Maffia wants to trade these rather rare formats of
sound and picture files. He probably has more of them
than anyone else, he's a rare bird that likes that type
of stuff. A simple post in csa8 might find out for him
if there's anybody else that likes the same type of
stuff. I like the original idea to exclude picture
and sound binaries, just have program files.

I'm very sorry, but could you use understandable English?

1419. Re: Trying to remember the name of a game.

Sounds like Fort Apocalypse to me.

1420. Re: Commodore Monitor + 130XE

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-18 00:00:00 UTC
From: Richard Heldmann <richard.heldmann@internetMCI.com>
Message-ID: <4v7958$kqi@news.internetmci.com>
Source record: 81261

I have the same setup, i.e. a 130XE and Commodore 1802 monitor. I am using a monitor cable which plugs into the back of the 130XE and has a five pin connector on one end and five wires on the other end. One wire I plug into the luma, one wire plugs into the chroma and the third wire is plugged into the audio connector. You may have to do a continuity check to find out which wire goes to which pin. The switch is in the Commodore video position. I have never had a monitor this clear. I found it two weeks ago!

1421. Atari 8-Bit Computers: Vendors and Developers

quit

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" shareware/freeware/PD developers should also be listed.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, public domain
software/freeware/shareware, (new) commercial software, used (commercial)
software.
```

"Developer" = Producer of products. Titles of products produced by the developer are listed. No product can be developed by more than one developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information is given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

More BRIEF Definitions

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware - protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

===>> Much of what is popularly referred to as PD is really Freeware! <<<==

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of the more prominent sources I use. Current Notes magazine, published by Robert Boardman and Howard E. Carson; Atari Classics magazine, published by Jim Hood and Bob Woolley; and The Atari 8-Bit Omnibus, published by David A. Paterson.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

General Masters? What did they release?

Anyone ever remember spending all that money for BASIC games that weren't even compiled? I got such a game called "Chicken Out". It also used that slow sector scanning that widened that pause between sector reads (What is that, anyway? My copy of Zork I had it too.) I eventually deleted it and put Turbo Basic on that disk.

And, generally any game you bought on cassette was the same way. Except you knew it was BASIC when you opened up the manual and it said "Type CLOAD."

But the great thing about Atari BASIC was, you really could make somethoing nice with it. Especially if you ripped off techniques from some video game companies like I did. That's what they get for releasing BASIC. hehehe..

1424. Melbourne House games now free for distribution

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-18 00:00:00 UTC
From: Fredrik Ekman <ekman@lysator.liu.se>
Message-ID: <dwhgq0vg0n.fsf@tintin.lysator.liu.se>
Source record: 81265
Cross-posted to: comp.sys.atari.8bit,comp.sys.cbm,comp.sys.sinclair,comp.sys.apple2,comp.sys.amstrad.8bit,comp.sys.oric

In case anyone still cares about copyrights for old games, I would like to forward a message I just got from Beam Software. Beam has the rights to all the games distributed by Melbourne House in the 80's. In the US, some of the Beam games, such as The Hobbit, were distributed by Addison-Wesley.

This came by as a result of an interview I have been making with Philip Mitchell regarding his text adventure series based on Tolkien's The Hobbit and The Lord of the Rings books. The interview will be published in a future issue of Other Hands. Contact me or watch comp.sys.sinclair for upcoming announcement if you are interested in the details.

Anyway, i quote Mr. Mitchell's message:

"After discussion with the company directors I am glad to be able to say that Beam has officially sanctioned electronic distribution of it's old Spectrum and C64 (and Oric, BBC, Amstrad etc) games - provided that such distribution is non-profit only. Please keep in mind that on some titles (e.g. The Hobbit) there are other parties who have a vested interest in the title and strictly speaking you would also need their permission."

If you want to confirm this, you can contact Beam through their Web site: http://www.beam.com.au/

1425. Making 1050 disks on a PC

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-18 00:00:00 UTC
From: orlo@mail.utexas.edu
Message-ID: <4v7kc3$7n7@geraldo.cc.utexas.edu>
Source record: 81266

I recently got some 1050 disk drives for my 800xl. Is there a way to make 1050 disks on a regular PC disk drive (1.2 meg or 360K)? Since my PC isn't close to my Atari, SIO2PC may not be an option for file transfer. Also, if I can't do this, is it possible to hook up a 1050 to my PC and make disks?

1426. Re: Commodore Monitor + 130XE

Message-ID: <4v7r65$45q@news.tcd.net>
Source record: 81267

Bet you are using the single cable from the Atari to the monitor, this will not work, you need a 5pin din cable to plug into the Atari and 2 of the 5 wires coming out of it will work, plug the I can't remember, think the white goes in the video on the monitor and the black into the audio..may be 2 other colors..

A comadore 5 pin din cable will work with the Atari..

What you are looking for as far as a keyboard is called a TransKey!. If my memory serves me right he sold the rights to FTE but I can't get ahold of Mike Hohman to verify it. Therefore the product is no longer avaiable..You might try B&C, Or Best Electronics.

Other than that advertise for wanted..Atari 8-bit Transkey board collecting dust..I am sure someone has one that they will part with..If you find 2 send one my way..

Sorry I can't help you on the monitor..perhaps a monitor geriou can and will..You can run a color rgb monitor out the back of the ibm case..cable is long enough on the 5pin din..

1432. Bounty Bob: Question

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-19 00:00:00 UTC
From: Rich Tirico <results@interpoint.net>
Message-ID: <321922F3.73DB@interpoint.net>
Source record: 81023

Has anyone had any luck running Bounty Bob Strikes Back from Yogi's site with APE and a 130xe?

I tried the Translator, MYDOS, quick menu, and I still can't get it to run. It loads all the way up to the last sector then nothing happens. I'm usually pretty good with this stuff, Do you need an Atari 800?

Thanks!,

-Rich.

I haven't been able to run it on either a 130XE or an 800. It should
not need a translator, but I tried that too. I tried several different
menu programs and got varying results, but never even an opening screen.

Has anyone gotten it to work besides Yogi?

Thanks. I noticed that this is an .exe file. I got the X:-it! emulator
but don't see anything in the documentation about how to run an .exe file.
With Xformer I think you gave it two options with the first being a disk
image with dos on it and the second being the executable file and it will
go right into the program. Does XL-it! work this way? Is there a utility
to convert it to an atr or xfd file?

In version 3.0 of PCXformer Reset is F10, Start is F7, Select is F8
and Option is F9. To select 800XL-NO BASIC start PCXf like normal then
once you're at the Ready prompt, press [Shift]+[F10]. This toggles
BASIC off/on. The F12 key selects 800,800XL or 130XE mode. The
Shift+F10 should put directly at DOS and/or boot the D1: disk. At the
very least, you should be at the DOS menu, B should NOT work (NO Cart
installed=BASIC off) and you should be able to do L then
Dn:"Autorun.sys".

Mine too... The things I remember that needed to be changed from
A->B->C were things like deleting more than 10 lines of code without
re-listing would lock up the computer, additional graphics modes access
(gr.12 through 15) and such.
If anything, I could see Rev. C code not working on Rev. A carts.
but not the other way around. I'd like to find out more anout this
strangeness.

[snip]
Hmmm. BEAM did all those crap games that the bastards went and tried to
sell two or more times (ie. ARDOK/ASTRIX and BOP'N'RUMBLE/BAD STREET BRAWL)
those are the exact game pairs just with some sprites edited and text
changed! Not too sorry/suprised to see them give their stuff away... But,
please specify- I know MH had the copyright on "WAR IN MIDDLE EARTH" but
"THE HOBBIT" and "LORD OF THE RINGS" (both are graphic text adventures...)
were done by someone else.?. I donno who- maybe under licence from BEAM
but the text/graphic adventures above were of uncommon quallity if BEAM had
anything to do with either of them... Anyway, if you know for sure who
did "THE HOBBIT" or "LORD OF THE RINGS" c64 text/graphics adventure games
please let me know.... Also, I have only come across "LORD OF THE RINGS"
once and it was a bad hack (ISCPIC) and the disk I had it on suffered from
bit-rot...

thanks,
Radioactive Warrior

: I'm very sorry, but could you use understandable English?

Yes, English is my native language. German is obviously Dirk's. A lot of young people speak English in Germany, but not everyone does. I expect if Dirk could speak English, he would have posted in English.

You are Russian I take it. The Internet is an International medium. So, if you had a question, and wanted to ask it, and I could speak Russian, I would answer. Sure, English is dominant, but no one should be discouraged in my humble opinion from asking questions if they CANNOT speak English.

Dirk asked about where to get various software and hardware, and I told him to contact Wolfgang Burger at the Atari Bit Byter Club in Herten. I told him Wolfgang is in Norway for four weeks, and I think he would be able to

help him......and that ABBUC is an excellent Atari club.

So basically the same wire used to hookup the C64 to the monitor should hook up the Atari to the monitor. (This is of course if I am correct in understanding the message).

Sigh... such simple answers. Thank you very much, again, excuse my ignorance.

In fact, all the ultra-serious Atari 8-bit users by now are Russian. I
was watching Russian news on C-Span once and saw Graphics-1 text denoting
the time and whatnot genlocked on the top of the screen. Wouldn't be
surprised if the other channel's news broadcast was programmed by a demo
group or something.

Yeah, I remember this. Wasn't it's full title Montezuma's Revenge? I
seem to remember having two copies, the one which you have and another
one, perhaps with more levels?

Anyway, one of my old favourites!

Anyone know if Spy Vs. Spy is available as an atr/xfd?

Kind regards.

Nope, this was a small mail-order shop that sold a number of little games very early in the days of the 8-bit, like 81-82. I believe they were all in BASIC though because they sold a number of games on a number of platforms.

And who was that company you'd always see in Creative Computing with the page full of games? Always a text-only ad and apparently all in BASIC too, but they made games for everything from the Mac to the Sol. I remember one was a Starwars based clone of Berzerk.

Then there was the Toronto company that made a single game (at least it's the only one I knew) where a snake was flying about the screen (why a snake was never explained) and it was something like space invaders - the snake dropped off parts that would come sailing down towards you. It was in ASM and VERY fast.

The best was the one that Happy Computing did. Complete strings handling and double-byte pokes and peeks, massive speed improvements (remember how badly Atari basic always did in the Creative Computing benchmarks?) and a compiler.

> everything I've seen, Rev C is the one that locks up least. Rev A
> was bad, but there was some kind of screwup with Rev B that made it
> lock up even more than A.

I heard the story thus:

A had a bug that was introduced when someone used the line-insert code as a basis for the line-delete code. The bug was well known (the famous "two line lockup) and written about.

B was introduced to fix this, and made it worse. Apparently the coder saw that the code was similar, and thinking there must have been a bug in the insert code, back-patched it there. The result was the same bug happened on inserts rather than deletes, which are FAR more common.

C finally fixed it.

The punch line is that otherwise they stayed the same. Atari BASIC had some good points, like the superb syntax (with LIST 100,120 instead of 100-120 which should list -20) and the ability to define line numbers mathematically.

On the other hand it was terribly slow (even though the Atari was one of the faster machines out there, it always ended up WAYYY down the Creative Computing benchmarks), and was missing RECORDS and any real string handling, two of BASIC's best features. Nor did it have any more advanced features like double-peeks and pokes or integer variables (A#).

They had lots of chances to make it better, and didn't. Says a lot about the company IMHO.

No, and it improved in some ways. For example, cities were now
identified, and attacks were shown graphically (with little arrows). It
also killed the cheat which allowed you to keep pressing start a lot and
not giving the computer time to think.

War in Middle Earth: I'm not sure about this. I do know that it does not seem to fall under the Beam Software release. I am currently investigating into this. What I do know is the following: 8-bit versions (Spectrum, C64, etc...) were made by Maelstrom Software. 16-bit versions were distributed by Virgin Games under the Melbourne House label. The Melbourne House name was sold about 1986 and all MH games up to that date are now (c) Beam. I think Virgin may have purchased the Melbourne House name, although I am not quite sure.

The Hobbit and Lord of the Rings: Both were written by Beam Software (which at the time was owned by Melbourne House (things are rather complex, I'll admit)). Melbourne House distributed the games in Europe and (presumably) Australia. The games were much later released in the US by Addison-Wesley. The AW version of The Hobbit was much improved compared with the original.

Finally, some action!
The continuing criminal investigation of Ortman/Admiral
Nuguru/Starfleet, Et Al has turned up the fact that some irate
customer of Terry's, who was screwed by him, hired an attorney in
Terrys hometown of Decatur, Il. When the attorney attempted to press
the lawsuit to recover his clients money, Terry turned his wrath on
him just like he did to the others he's screwed here on the net. The
attorney, un- intimidated, laughed and had him arrested! "Don't try
that crap on me"!, He must have said as he dialed the local police!
I got that from the State of Illinois Investigator when he called me
and asked me to post this message: Don't call the State Police or the
Attorney Generals office about Terry just being a jerk, (they know
that), but if you've been screwed by him he urgently wants to hear
from you *in writing* about what happened. They really want to grab
his computers again and take him off the net, but people just want to
whine and complain but won't really do anything to help themselves if
it requires any effort.

So this is your challenge: If you've been screwed and can prove it,
contact Rodney Miller, Illinois State Police, 2125 S. 1st, St,
Champaign, Il, 61828 You may phone him direct if you wish at 217 333
1211 or Fax him at 217 333 8451 (This is the guy who took his
computers and hundreds of disks of porn last time!).

The lesson here is that the authorities will take over and deal with
it if you can show they have jurisdiction over the perpetrator. That
means no matter where you live, you notify the authorities in the guy
who screwed you's home state. Please do your civic duty, if you can
help, as noted above do so.

(Would the person who hired the attorney please let us know who he is?
There may be lots more business for him! Anyway some congrats!)

Hi!

I not quite sure about the name, but I think it was Flip and Flop or Flip Flop! The game with the kangaroo turning these tiles on the floor upside down....

Who knows where to find it?

TIA, Dirk

Ok, it seems that the right plugs have to go in the right jacks. Put the video plug in the video jack and the audio plug in the audio jack. As for mono, I'm guessing you plug the chrono plug into that. If you don't have it or have only the two plugs, then skip it.

That's my estimation, if someone here with a much more detailed understanding can explain it further or correct me if I'm wrong then that will be nice. Hope this helps...

The Commadore 1702 Monitor will not give you color on a 600 and
800XL unless you add the CHROMA curcuit in them. If this isn't you problem
- - , well, I did fix one several years ago that had a broken capacitor. Been so
long I don't remember which one but I know it was in the color curcuit somewhere.

well, the commodore has more pins in it's monitor port, but will accept an
atari 5-pin cable, with the other pins unconnected. if you happen to have
a 5-pin cable on your commodore, it will work on the atari. If you have
the 7 or 8 pin or whatever it is, it won't.

1465. 800XL No Color

-- Anthony

It's called "Montezuma's Revenge". Both the original version from
Utopia Software (about 40k) and the "Preliminary Monty" (actually the
prototype Parker Brothers Cartridge Version, released AFTER the first
one) are already in the archive, /BINARIES/JTOR/
As a side note, Robert Jaeger and Utopia are working on a 3d doom-type
montezuma's revenge for the PC you can look on their home page for
some screen shots.
Sorry, don't have the URL handy. I didn't bookmark it.

If you get a Ramrod OS board, you can get a SIMILAR to 800 OS - It
will still Bank select and all the entry points are the same - about
10-20 titles still wont run, but it's a lot better.
You can switch between 3 OS chips with it.

-2) Can I connect an IBM 3.5" disk drive to a 130XE?

A user's group in Germany or somewhere was supposed to be selling
something to do just that - They said to "watch this message base for
details" and that's what I'm doing - watching for details.

>
> I tried the Translator, MYDOS, quick menu, and I still can't get it to
>run. It loads all the way up to the last sector then nothing happens.
>I'm usually pretty good with this stuff, Do you need an Atari 800?

Rich,

Are you using a boot menu? I tried a few that didn't work, but
it does work when loaded directly from my OMNIMON with
the 'G BOUNTY.EXE' program. I will try a few others and
see if I can find one that works. The problem is not with APE, nor
would I think its your XE (im using a suped up 800xl), its the
way it loads into memory.

If I get it onto a bootable ATR, i will include the version
I hacked to allow you to start with unlimited lives <grin>.

BTW: for the people wo did get it running, have you had
any problems with it? I played upto level 6 but then the sprites
got all scrambled, and it locked :(

: Thanks for taking the time to create this Kyle. A few comments:

: Kyle R. Hofmann (rhofmann@crl.com) wrote:
: :
: : REQUEST FOR DISCUSSION (RFD)
: : moderated group comp.binaries.atari
: : unmoderated group comp.binaries.atari.discuss

: Is it possible to just use comp.sys.atari.st to discuss stuff in
: comp.binaries.atari? Why create comp.binaries.atari.discuss?

Yes, it's possible, but not everything posted in c.b.a will be ST
related. It's better to be more general in this case and to create a
.discuss group to handle all traffic concerning c.b.a.

: I know I won't go looking for something in c.b.a. unless I read about it in
: c.s.a.st as I don't intend to poke my nose in there if I can help it.

Hmm... It would possible to allow crossposting of part 0 of uuencoded
files to other comp.sys.atari groups (part 0 is traditionally a
text description, while parts 1 and up are the file itself). Is this a
good idea? It may not be, especially if we get a lot of postings to c.b.a.

: Also, does it have to be moderated? Seems like that was the cause of
: problems before.

Yes, it does. Nobody has tried to create a moderated comp.binaries
groups since comp.binaries.apple2 a long time ago, and that was changed
to moderated eventually. The proposal won't be accepted by the
news.announce.newgroups moderator if it isn't moderated.

: And then, of course, comes the issue of: do we really
: need this.

IMHO, yes.

: Right now I'd say we do, primarily because there is no satisfactory ftp
: site. I wish we could set up a really nice network of ftp sites (one
: in US, one in UK, one in Germany, France, etc...) that all mirrored the
: complete archive. U-Mich used to do this, but seems to have gone all
: rough around the edges.

That would probably be a very good thing, but that would still exclude
those who don't have FTP access. :(This way we can include them (as
long as they have Usenet access) and not worry about having to set up FTP
sites.

The C64 had more than 5 pins. The Atari is a standard 5 pin din with
Composite, Chroma, Lum, and audio. The Commodore 1702 and 1804
monitors have chroma and lum connectors, so you might as well take
advantage of it. BTw, yes, you CAN use this monitor with a SVHS
connector! Just buy a SVHS cable, cut it in half and solder on phono
jacks. Also, I remember some Atari's having trouble with the chroma.
The 800 was fine, but i think some of the XLs required an internal
mod.

: >Please modify the proposal to allow music and picture files specific
: >to the Atari 8-bit computer to be posted.

: Hmmm, as long as we still prohibit MOD files (which do have an appropriate
: venue for distirbution), I think we might consider Atari-specific files.
: Technically, the "chip music" files for both the 8-bit and ST series
: probably could be considered binaries in that they are obviously not
: graphics nor text, and they aren't useful on any other platform.

This is certainly an important issue. Chip music files don't have
anywhere to go (unless one newgroups alt.binaries.chip-specific :) and do
deserve some distribution. But see below.

: 8-bit graphics files are so tiny (<=8K as I recall) that I don't have a
: problem with that, either. ST-resolution graphics would have to be pretty
: special to qualify, though; 32k isn't huge but it's big enough to be a
: nuisance if a lot of them are posted, and frankly, while I love the
: systems, I am underwhelmed with most of the graphics that have been
: produced for it. This is a case where I think http distribution does make
: more sense.

I don't have a problem with 8 bit graphics files in terms of size, but
conceptually, I can't see a group meant for Atari binaries in general
excluding binaries for the ST simply because of their size. I don't
think it would be a problem, though, as 32k isn't all that big in
comparison to other things that are posted.

I recieved e-mail concerning an issue similar to this from someone
recently, but it was more general. The issue was: What kinds of data
files are to be accepted? If you think about it, it's important if you
plan to moderate the group much more than "no WaReZ".

To my knowledge, there isn't a proposal out there that has discussed
this issue much, mainly because all the comp.binaries groups that have
been proposed so far haven't tried to limit themselves much beyond what
platform they are for.

My response to this question is that we should probably post data files used in the operation of software. For example, if I draw a picture, it wouldn't be distributable on c.b.a because, after all, it's only a picture. If I create a character set for use with a word processor, though, then that would be distributable on c.b.a because it's used during the operation of the software. (I hope you're all not confused :) Does anyone else want to contribute? If you have a good idea, post it.

All of the above. Any Atari software is acceptable. If someone writes
a Jaguar or Lynx emulator, that would be accepted too, along with
titles. This is intended as a generic Atari software group, not as an
8bit or 16bit specific Atari binaries group.

Look for the Atari 8-bit vendor list that was posted a day or two ago. I think Bob Puff still sells the XF551 upgrade and the Black Box. The XF551 is the 5 1/4 inch DSDD floppy drive that Atari made. With the CSS upgrade kit you could replace the 5 1/4 drive mechanism with a 3.5, or, for a few bucks more, use both drives at the same time. The Black Box is a much more expensive upgrade that includes a printer port, high speed serial port, and a SCSI hard disk interface. With the Black Box and the optional Floppy Board, you could use any size floppy drives.
(I haven't actually used any of these products, only read about them.)

To get XL-It! to run an .EXE you'll have to put it inside an .ATR
image. There's a utility on Marcus' homepage that will let you do it. It's
called IMAGEMAN I think. It's a DOS application and it seems to work pretty
well.

400s are great for parts. CPU, POKEY, ANTIC, GTIA... and some TTL if
you're on a *really tight* budget.

> 2) Can I connect an IBM 3.5" disk drive to a 130XE?

I installed a switchable OS on my 800xl: soldered a socket on top of the OS ROM and installed a switch on the CS line. I have an alternate XL os installed (fast math, fast chip, fast key repeat, Gr.0 screen dump routine), but I can't see a reason why the 400/800 xl OS couldn't be installed.

For the 3.5" drive, there are mods to add or swap the mech in an XF551 drive with a 720k drive; the Black Box with floppy board supports 1.44 drives (up to four).

Hi,

I Have an ATARI 800XL with a 1050, in my house. :)

And in my office i have internet connection.

How can i transfer image disk (in unix system .ATR/.XFD files) into floppy disks (5.25'') to my old ATARI ..??? ;)

Thanks in advance.

.mod files may be in some mod archive somewhere or floating out in
alt.binaries.sounds.mods. Other stuff may be lost. It's unfortunate,
but probably true. If we do eliminate the "software only" restriction,
then we would have a means of distributing these files (which are
platform specific, thus making comp.binaries.atari a good choice).

Scott,

In XL-It 0.15 you can enter into monitor mode by pressing F7. One of the commands you can enter is <d> <disk image>, where <d> is the drive number. So, if you were to type: 1 conan2.atr, it should "switch" disks. You can find this command documented in either of the xlit015 manual files that are included in the zip file. Even though you can enter multiple .atr files on the command line(representing drives 1-4), I have not found any way to access all of the drives. If anyone else has any further information, I would be interested.

PC X-former 3.0, which costs $29.95 US, can also dynamically switch disks. The freeware version, 2.5, does not have this feature, and only seems to be able to play single disk games. This is too bad, as it is significantly faster than XL-It.

Hope this helps.

My 130XE has the Bob Puff Ultra Speed Plus upgrade and a toggle
switch on the back switches between a stock XE operating system, a
translator 400/800 operating system, and the US+ operating system. It has
worked great for me.

Greetings,
Miner 49er was one of my all time favorite Atari 8-bit games. I could only get to see and enjoy the higher levels once I learned about that "phone number trick" (I had the cartridge version which allowed that).

Soooo, I was thrilled to get a chance to play BB Strikes Back. I put it on a SpartaDOS 2.3E disk using the SpartaDOS AUTORUN.SYS (logomenu) boot loader. This worked immediately for me on a 65XE. No Translator required. AND, using APE cable & software !

Of course, I am terrible at the game. Even with 4 lives I cannot get past the first screen. Maybe with unlimited lives I can get to screen two before mine runs out ? Thanks Steve !!

(Gee, would we all want unlimited lives? Maybe that's a topic for a different usenet group???)

I went from a 48K 400 to a 130XE after the 400 was hit by lightning.
It was fine, but I figured it was a good excuse anyway. The only cartridge I
ever used was SpartaDOS X, and I always made sure to place the manual
underneath the cartridge so it wouldn't bend down too far and lose contact
(the SDX manual was just big enough for that). But I never had any RF
problems and the keyboard was pretty spiffy after using the membrane :)

XFD is a raw disk image, used by the Xformer.
ATR is almost the same thing, but with a 16 byte header added, used by
SIO2PC.
DCM is a file format created for uploading boot disks to BBSes before
there were emulators. Unlike the other file formats, DCM uses a simple
form of compression, but the files can be compressed further by using ARC
or other compressors.

I really appreciate you making the files accessablyeible to the ordanary 8bit user. But, what I am suggesting would kill two birds with one stone. Instead of having an ATR section and a seperate DCM section, why not take the dDCM's and arc them? Theis is the technique used by most 8bit bulletin boards. The ones that are left anyways. This one format can be used by both the intel ownder er and the 8bit owner., and you could gtake off the ATR's. Arc doesn't have as high a compression ratio as zip, but it's still respectable, and MUCH better than having an uncompressed ATR and DCM section.

I know that you've put alot of time and erffort into your site already. Not once, but twice. It's fine just the way it is. But, if you would like to free up some more space for more files, I think what I'm suggesting would free up <alot> os f space, and the single format (arced dcm's) would be acceptablible to botheveryone. Just a thought.

Any chance of a pointer on what all these different formats are?

And where _can_ I get a ROM image? I haven't had my 400 for many a year now, but I still want to try some old programs.

Hello again!

First off I would like to thank everyone for all there help. Got a great system from Bob Klass and perfect cables from Rory Mcmahon, not to mention some good reading material from David Moeser. (Didn't forget Rory, still owe you a little for some parts...)

Now that I have got everything up and running I have noticed a small problem. I boot up Ultima II, II or IV on the 130 with it in APE's slot #1. When I go to Create Characters or Start game, it asks to switch disks. I swap the second with the 1st disk and nothing happens. I am presuming the program is waiting for an acceptance of a new disk from the drive. Am I correct? And if so can I get APE to do this? I suppose I can just run it off real disks, but help would be appreciated.

1517. Program to read/write A8 disks on pc

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-21 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <4vf350$et3@madeline.INS.CWRU.Edu>
Source record: 81080

Blabbing away again. I worked on my pair of utilities yesterday.
You know the ones that read/write A8 dbl density disks on
A8 and pc. I keep reading posts of people who want to transfer
files, mostly from pc to A8 and don't have a boot disk, etc.
etc. this is what my programs do. I am having a lot of trouble
with writing A8 stuff at pc. Reading on the pc is fine.
I have successfully got my pc program to format and write
DOS (Sparta or MyDOS) to disk, which the dbl. dens. A8 can
use. Only problem, only using a 360k drive for the pc.
I routinely use my programs to get stuff back and forth
between A8 and pc, just it is a bit 'gnarly' at the moment.
For instance, I'm now sure my program doesn't restore the
disk base table correctly, I have to fix that. Or re-boot
the pc every time. The person who has a similar problem
on the MAC. A null modem is the best solution, I think.
Only he says he can't get a 850. I don't have a solution
for the MAC. MAC will not do 5.25" floppies, only
3.5" floppies. No solution for the MAC yet.
Probably spend another day at this. The thing is the
1.2 meg drive. It has a head 1/2 the size of the pc 360k
or A8 drives and this presents problems. Also the
recording is normally much stronger using high density
drive. :>

>as more space is available. Has anyone noticed that about 1/2 the time
>BBSB messes up on the 2nd screen??? Anyone know why? I think it might
>be the menu program I am using.

If I pop in with Omnimon it does that as soon as you jump on
the elevator. I think its hiding some stuff under the OS, since
omnimon acts odd unless you enter with option+select.

I also noticed it messes up on level 5, and every even level
after 10 for (might have been the odd levels). I had to bypass
those levels.

Thanks, John. I got it working perfectly now, even on Summer Games, which was always one of my favorites (some of the moves are actually easier with the keyboard). I'm not having any speed problems with Conan, in fact I'd like it to go a little slower so the music's not messed up!

Now, has anyone been able to use those big-assed zipped .atr files on Yogi's site? (i.e. GAMES001.ATR, GAMES002.ATR, etc.) I am dying to play "Bruce Lee"!

Not sure why you want to do this, but maybe you should think
about starting with an XE-GS (game system). It came with a
detachable keyboard and was compatible with all XL software
as I recall.

Make up a "null-modem" cable, using the modem driver which turns the
Atari joystick ports into a pseudo rs-232 port. Haven't tried it, but
it should work.

Alternative .. try to find someone who will LEND you an 850 for a while
to xfer your files via a regular null modem cable.

I have the following Atari Hardware and Software available as of
8-21-96

EQUIPMENT:

300AT Modem by Supra with software - Free just pay S&H

2- Atari joysticks - $5 + SH

Antic Magazine Software Disks from 1988 to June/July 1990

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Take any of the above books for $4 & SH or
Take all three books for $10 & SH

SOFTWARE:

Most include manual/instructions

1. THE NEWSROOM (5 disks with lots of clipart)
this is an excellent publisher $20 & SH

2. THE PRINT SHOP - a excellent bundle including:
The Print Shop
The Print Shop Companion
Three Graphic Disks
Holiday & Special Events Graphics Disk
No Frills Software Fonts & Borders 1

7 Total disks $20 + SH

3. TYPESETTER by Xlent Software $5 & SH

4. MAGNIPRINT by Alpha Systems $4 & SH

5. a 3 disk bundle by HI-TECH EXPRESSIONS include:
CardWare
AwardWare
AwardWare Graphics $8 & SH

EXCELLENT GAMES AVAILABLE:

1. THE SEVEN CITIES OF GOLD
by Electronic Arts (made M*U*L*E) $5

2. KARATEKA by Broderbund
excellent Karate game $5

3. SUPER BOLDERDASH
by Electronic Arts $4

4. MICROLEAGUE BASEBALL(1984) $5

5. LEADER BOARD - Dual Pack
Excellent Golf Game includes
Double sided disk with the LEADERBOARD
on one side & Tournament on other $5

6. GAUNTLET
by Mindscape
Excellent Arcade Game
(must have 800XL, 65XE or 130XE) $5

7. HACKER
a simulation games that forces a player to
hack their way into a system. This
game purposly comes with no instructions $4

---

1. DIAMOND OS by Reeve Software $3

Take ALL the above software in a disk case for $75 & SH

DISK CASE (hold 100 5 1/4 floppies) $5 ea & SH

---

40 Blank 5 1/4 Disks $10
with disk case $15

I also have about 60-65 5 1/4 disk full of arcade games of unknown
origin. I'll sell all these for $15 & SH. I'll even throw in a disk
case.

Take all above SW and two disk cases for $110 & SH.
(and I throw in the 2 Atari joysticks)

COD or personal check (with stuff being sent out when check clears).

Buyer pays shipping.

Make offers including shipping.

That's true. I think they ripped 'em out of typewriters. In fact,
I'm pretty sure they were made by a typewriter company.

> done (with other items) but doesn't seem to totally
> eliminate the problem I described.

At that point all I ever used was SDX and it hardly ever left the
computer. Maybe that has something to do with it. They really should have
put in some kind of support for the cartridge though. That slot was in a bad
place anyway. I could've used different carts (like Action!) if I had the
space behind my computer to plug them into the SDX cart. An "L" adapter would
have been nice.

OK ... this is where there is a gap between design and implemntation.

The RS-232 spec calls for transmitting data with voltage at a minimum
of (something like) 9 volts or more, with the most common chips
putting out 12 volts unloaded. I think they allowed it to drop to 7
volts under a full receiver load .

The receiving device was supposed to responde to 3 volts or more as a
valid voltage, with thw two most common chips allowing .7 volts or
more, or 1.3 volts or more. This is designed for noise immunity and
to ignore ringing. So the more common receivers have noise immunity
in the range of .7 volts.

There is also a spec on rise and fall times of the data, and the
common transmitters can control this with added capacitors. This is
to cut down on cross talk and noise and rf interference. This also
limits maximum speed, of course.

The end result of the standard implementation is that no one really
limits the rise or fall times, so it is only the inherent current
limiting of the driver, the capacitance of the cable, and the load of
the receiver that limits the speed.

In general, 50 feet is considered a sort of first limiting distance
for high speed, with longer lengths possible at slower data rates, up
to about a thousand feet or so. In fact, we generally have no trouble
in an industrial environment with runs as long as 300 feet at 9600
baud. This is with drivers which put out the full 12 volts, when we
have ever had troubles, it is usually because the drivers was putting
out less (due to its design).

PCs generally put out either 12, or 9, or occasionally 5. The
commonly used converter cable talked about on here using just the cmos
drivers would only put out 5 or less, and no dual polarity (the RS232
spec calls for both plus and minus voltages from the driver, for noise

immunity primarily). The design using the MAX chips would put out more like +/- 7 or so (I should look up the specs on them, they have a number of different ones, but the most is +/- 10)

All that as background, with lousey drivers, and shielded cable, you should be able to get 30 feet or so with no trouble. With good drivers you should be able to get 150 feet (at the stock 19200 baud rate). The difference is because the driver has more omph to push the line from one state to the other when bashing bits out, as well as better noise immunity.

<grin> The bottom line is almost always try it and see if it works. A lot depends on the specifics of the PC port, and its receiving ddevices. I have a couple of PCs that cannot talk to a RS model 100 due to the low voltage output it uses (+/- 5), but most PCs have no trouble. But if it works at 5 feet, it will most likely also work at 30 feet, given a reasonable noise environment, using the implemnation with the Maxum drivers. The CMOS implentation might have trouble over ten feet, however, due to slow rise and fall times driving the cable capacitance. But if it doesn't work, I would say just change to the MAX chip implemnetation.

800)

The Atari OS Switch

(based on an article in ANTIC)

Remember, do this at your own risk!

PARTS: DPDT mini switch (1)
28 pin socket (1)
Thin wire (about a foot or so)
Second OS ROM chip.

Step 1: Remove the OS ROM from your XL/XE computer

Step 2: Solder a 28 pin socket on top of the OS ROM, pin to pin.

Step 3: This is a diagram of the DPDT switch.
All letter references [A] refer to the positions
marked below.

Switch: +---+
|A B|
|C D|
|E F|
+---+

Step 4: Connect [A] to [F]

Step 5: Connect [B] to [E]

Step 6: Bend up pin 20 on both of the ROMs.

Step 7: Connect pin 28 on the ROM/socket to [E]

Step 8: Connect pin 22 on the ROM/socket to [F]

Step 9: Connect pin 20 of the original ROM to [C]

Step 10:Connect pin 20 of the new ROM to [D]

Step 11:Plug the new ROM into the socket.

Step 12:Plug the package of ROMs into the motherboard.

You can now switch between OSes. I used inline pins to go
to pin 20 on both ROMs; lets me make changes.

You'll have to reboot if you try switching with power on.

Hope this helps,

Dave Paterson

From: ellman@xs4all.nl
Message-ID: <4vhfdk$71g@news.xs4all.nl>
Source record: 81102

Hi,

Does anyone know an algorithm for generating the colour values of the Atari's 256 colous in terms of RGB values with an 8-bit depth for each component (ie. 24 bits in all).

The input would be the chrominance and luminance as used on the XL, and the output would be a colour in the 0xRRGGBB format as used on 24-bit colour systems.

I hope that someday, I will get round to writing a Java applet that displays the Atari Rainbow, or think of something else using the rainbow.

Thanks in advance.

AE.

If you can hack it, you can have it! :)

Sure it may be possible to put the mother board of a XL in a PC case.
You'll have to hold the board down somehow, have access to all ports such
as joystick and cartridge, and open up a 8-bit drive and hook it on the
drive bay(if it's possible).

Then again, I wouldn't try it myself. Good luck with it man! :)

There is a program/upgrade to do this, although I forget the
details. I think it is a hardware upgrade. Boy, it's hell to get old.
If I remember correctly, it woll switch up to 3 different OSes. 800,XL
and itsown, I believe. Its OS was suppose to be pretty well enhanced,
but not compatible with the regular OSes.

DiskFormer, in the umich archive, also works beautifully to transfer xfd's and atr's straight onto a floppy or vice versa - no need to go through the dcm biz.

Mounting the motherboard will be easy enough, you'll just have to drill some extra holes in the bottom of the case. Rather than try to line up the ports with existing openings, though, just use 9-pin serial port plates (the kidn that come with a ribbon cable already on 'em) and stick matching plugs on the ends; that way, you don't have to worry about where the joystick ports end up (on my Mega STe, all the ports face the "front" of the tower case - works great).

The cartridge port will be tougher; look for something that has the right edge connector already and be prepared to saw some off the end to make it fit; add a ribbon cable and socket to put the cart port in one fo the drive bays, so you can reach it from the front of the box.

Keyboard? XEGS will sure be easier....

And SIO devices will be rough unless you make a special cable and use a 15-pin sub-D plug to go through the back of the PC case - can be done, though. There's plenty of power available, after all.

Good luck!

: Hi John,

: I seem to remember that in _Mapping the Atari_, the description of the
: Pokey's addresses included information about how poking values there
: affected the sound. For example, it explained that the pitch circuit was
: a divide-by-n, and so larger numbers poked there produced lower pitches.
: It also went into detail about how poking the 'mode' byte would pair up
: the four 8-bit counters into two 16-bit counters, and so on.

: I assume you're looking for this information to produce a Pokey
: emulator? If so, I can give you a little information about the
: waveforms. Poking an even number into the 'distortion' byte for each
: channel produces different waveforms:
[lines deleted]
There is some more detailed information in the Atari 400/800 Hardware
reference manual about the Pokey chip. There is a scematic of the Pokey
chip and some other information about it.
Is anyone working on a Pokey emulator?

-
--Scott

You need to boot up xlit with the command line:

atari -nobasic menu.atr games001.atr

The menu.atr is an image on the homepage and I'm pretty sure I put it
in the FTP also.

Now that Atari Corp. is no longer in existence, I am willing to bet that anything bearing the Atari trademark will fast become a collectors item in the computer world, so hang on to your old Atari's and watch the prices rise for a collectable. Just a thought, knowing what happens to other so called obsolete stuff in the world of collectors.

: Rick

Curious that you seem to have two problems with your 800XL (no modulator signal to a TV and no color on a monitor). However the modulator, whether it works or not, should have no effect on the video signal sent to a monitor. If you've eliminated the video cable and pinout differences between the 800XL and 130XE as the trouble, and have replaced several components in the video circuit without result, you should check the machine's crystal oscillator frequency. It must be very close to 3.579545 MHz (NTST) to produce color on a monitor (or TV for that matter). There is no adjustment. If the frequency is high or low by more than a few hertz, replace the crystal and/or check the oscillator circuitry. Also check all +5V sources (+5A, +5B, and +5C) since the power supply seems to be the only thing common to both modulator and video symptoms.

>Is anyone working on a Pokey emulator?
```

The book "De Re Atari" contained a whole chapter devoted to sound on the XL.

Is there a good program for the XL that lets you compose POKEY music that gives you complete control over the POKEY chip's sound facilities? Perhaps, someone could write a program that plays POKEY music on the PC using whatever file format the progam on the XL saves it's music as. Or someone could even write a program to compile POKEY sound files to MOD files (it might not be possible to do this using the standard MOD format, as there was a register on the pokey that did all kinds of funky stuff, like convert two sound chanels into a single 16-bit soundchannel).

AE.

(AE asks if the pc<->A8 disk read/write program I'm working on
will read/write a 'flippy'.)
Nope, AE, you can't put a notch on the other side and use the
back of a disk on a pc. The pc uses the timing hole I think.
Then there are people who talk about actually making that timing
hole somehow, but no, you gotta use just one side.

1561. SIO2PC cables- inexpensive supply update

From: eru@sover.net
Message-ID: <321d65ca.12935822@news.sover.net>
Source record: 80974

I have three requests so far for cables (1 chip version). These cables will have a db25 f connector, so you can use a fully wired modem cable to connect your PC to the SIO2PC box (Eliminating 9 pin/25 pin worries). On the Atari side, I plan to have a halved SIO cable. The housing will be a standard Radio Shank blue project box, or similar. After a successful initail production, I will offer custom cables, so you can decide everything about your cables' make-up, from the housing, to the type of sockets used. Thanks to those three who have responded so far, and to everyone else who wants one of these great gadgets, let me know of your interest soon, so I can order the parts and make good here!! :)
Cables will probably be around $20-$30 (note the revised price!! :-)

Atari 2600 Emulator for DOS

My new Atari 2600 emulator is available on

http://users.aol.com/autismuk/a26home.htm

It is written in assembler and is about 20k in size (unzipped). This is an alpha release
but it does work fairly well with basic 2k/4k cartridges.

Hope to add bigger carts and some other stuff soon !

Out of curiosity, why wasn't MODE14 in the BASIC from day 1? Why was this mode "hidden" to users.

You need any terminal program that has the MPP driver .. which used
the joystick ports to connect to a modem, instead of connecting via
an 850 via the serial port.

Bill
(Bobterm.mpp is an example of a terminal prog. with this driver)

Actually, the modulator on an 800XL is the guy who mixes the CHROMA and LUMA into composite. So, if the modulator is malfunctioning, you may get no color in your video. (the 800XL is the only Atari that uses the modulator to do this....) The easiest way to circumvent this (if you have a separate CHROMA monitor) is to wire a .05ufd capacitor to the emitter of Q5 and the unused monitor pin.

Because the original Atari 400/800's had a CTIA chip instead of the later GTIA chip. The CTIA only supported Graphics modes 0-8. The Basic cart was written originally for the CTIA, although they must have known there were to be more modes later, else why allow entry of modes in the range 9-15?

Hello;

You old fossle! Nice to see you out and about. As to Atari becoming an obslite item I doubt it..Too many items produced for it, and I still have a bunch stored away.so with my luck the will never let me retire..keep fixing and upgrading the older stuff!

Hehe.

Every once in a while I run across something I have not seen in the past 12 years..?? Wish I had it all but..have enough..

You still running PRO?

Bob

Message-ID: <4vli4k$gmi@news.tcd.net>
Source record: 80992

Have come across some postings on the Atari 8-Bit boards from disgruntled users (semi-Pirates) that there is no SUPPORT! for the ATARI 8-BIT USER WHO PURCHASES BBS EXPRESS! PROFESSIONAL.!!

There is one thing that is straight fact...If you PIRATE, PRO there is NO SUPPORT. If you purchas it outright and are a registered NODE user we will support you to the hilt..have 3 BBS up and running 24 hours a day..Primary The Repair Shop 801-966-1697,..

Will forward all problems to the Programer..so will the other 2 boards..

Now if you have Pis..ed off the Programer..I can not help you I pay him for all support..If you actually own the Node I can help you..will fix any problem, (BUG!) we can duplicate and will take into consideration those we cant to resolve the problem.

So don't let anyone tell you there is no support for BBS Express! Professional..there is and as long as 1 BBS remains up using our nodes legaly the programer will have up a support board..!

Bob Klaas
Stephen C. Carden
Lyle Ealr..

Bob Klaas does in fact own K-Products Souly..Stephen Carden is the programer..and Lyle Earl is owner of a support BBS!!

Thanks
Bob

Naw, you don't want to do that. Do what I did and take two floppy drives out of their Indus/Atari/Percom/whatever cases, pop them into a PC case, and also epoxy/strap the power supplies in the case as well. I did that, plus I had room for a modem. I also added a peripheral end connector to the back of the case, so the computer i/o cable just loops around and plugs in the back. A power bar attached to the back of the computer handles the rest of the stuff, and the cables are extremely neat.

Do that and it'll look great.

I brought it into one of our meetings, and most of the membership thought it was actually made by Atari.....hell, I must have done something right!

Perhaps in ten years a shrink-wrapped Combat cartridge will be valuable.
Because by then, you would think, they would all have been opened.

I think it has something to do with the emulator you run, and what sort of system the emulator is running, as well as what version. I see it from time to time on the PC Xformer.

Reminds me... There was a thread earlier about Bounty Bob Strikes Again, and its collectability, cart-wise. I took a look at all the carts I got, and found that I do indeed have Bounty Bob on a cart, including, of all things, the little poster it came with. How much is it worth now? Can someone please repost the listing of carts and their rarity?

Heh, heh...old Atari machines and games are 'already' collector items! :)

There's a niche market for classic games and systems. It's the only
reason I still use my 130XE :)

ARGHH!!
It's not hidden,graphics mode 15 didn't exist yes.Hence NO programmes
would've seen it.You had to access the hardware to reach it.
It was the 1200XL OS that introduced it to the S: handler.
The same with graphics modes 12-14.
I don't know when support for 9-11 (the GTIA modes) was implemented.
It's in my 800 OS.But there were two versions of the 800 OS.
There's still at least one ANTIC mode not implemented in the S: handler.
The "decender" text mode.It had something to do with lowercase text.
(how it could decend below the bottom of the text cell)

My understanding is that BBSB is ER. I don't know exact worth, but I'd
guess it's as much or more than almost any other 8-bit cart. I know I'd
love one!

--
Sorry to post this to your newsgroup, but I had to try it!

I read this and thought, "What could I lose?"
Read through it and maybe you'll like to try it as well!
But please be honest. That is how it works.

"MAKE-MONEY-FAST"

----- Adapted article by Jody Vining (#4 below) ----------------

Want to make a few bucks? Quick, easy and cheap?

Ok ok, we have all heard this before, laughed at it, thought it was stupid, so did I. But one day, I was bored, and wanted to see if this thing really works, the now infamous newsgroup "make-money-fast" routine.
And well, to my surprise, it ACTUALLY WORKED. I didn't make $50,000 like some said, but I DID make $3,200 in 1 month. Thats not bad for a $5 investment!

So now try it, maybe you'll make less, maybe you'll make more, but its worth a shot right?

The procedure is very simple.

STEP 1. Write your name and address on 5 separate pieces of paper with the words "PLEASE ADD ME TO YOUR MAILING LIST". Fold a $1 note or money order or bank draft in each of the pieces of paper and mail them to the following five addresses:

---
1. Sahba Zadeh, 16115 122 Pl. NE, Bothell, WA 98011, USA

2. John England, 570 Vista Ave. Palo Alto, CA 94306, USA

3. Jeannette Bidegain, 2301 Redwood Street, #1406, Las Vegas, NV 89102,USA

4. Jody Vining, 987 Shetland Ave, Winter Springs, FL, 32708

5. Mitch Whiteley, 1026 N. 510 W. Apt. 4A, Logan, UT 84341

STEP 2. Now remove the 1st name on the list, move the other 4 names up (5 becomes 4, 4 becomes 3 etc) and put your name and address as number 5 on the list. You can do this by re-typing this article or simply editing and re-posting it in this or another newsgroup.

STEP 3. Post your amended article to at least 200 new groups (there are 17 000 of them).

You are now in the Mail Order Investment Business and you will start receiving $1 returns by mail within a week or two. The more newsgroups you post to, the bigger your return will be. You may want to rent a Post Office Box to handle the volume of mail you are likely to receive.

If you wish to remain anonymous, you can use a pseudonym such as "The Manager" or "The Investor", but make sure your address is correct!

NOW LET ME TELL YOU WHY THIS SYSTEM WORKS!

Of every 200 postings I made, I received an average of 5 replies, YES - ONLY 5, each with a $1 bill enclosed. You make $5 for every 200 postings WITH YOUR NAME AT NUMBER 5.

Each person who sent you $1, now also makes let's say,only 200 additional postings WITH YOUR NAME AT NUMBER 4, i.e. 1000 postings. On average therefore, 50 people will send you $1 with your name at number 4. You make $50.

Your 50 new agents make 200 posting each WITH YOUR NAME AT NUMBER 3 or 10 000 postings - average return 500 at $1 each is $500. They make 200 postings each WITH YOUR NAME AT NUMBER 2 = 100 000 postings = 5 000 returns at $1 each = $5 000.

Finally, 5 000 people make 200 postings each WITH YOUR NAME AT NUMBER 1 and you get a return of $50 000 before you name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE ONLY MAKES 200 POSTINGS! Total income in one cycle = $55 500.

From time to time, when your name is no longer on the list, you take the latest posting that is appearing in the newsgroups, SEND OUT ANOTHER $5 TO THE NAMES THAT ARE ON THE LIST, PUT YOUR NAME IN AT NUMBER 5 AND START POSTING AGAIN. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Let's review the reasons why you should do this: THE ONLY COST FACTORS ARE 5 STAMPS, 5 ENVELOPES, AND 5 $1 BILLS. Anyone can afford five dollars to put into such an effortless investment with SPECTACULAR RETURNS.

Some people have said to me "What happens if the scheme is 'played out' and no one sends me any money"? Big deal! So you lose $5 - but what are the chances of that happening?

Do you realise how many Internet Users there are? Do you realise how many times this scheme can be utilised over and over again - with COMPLETELY NEW people participating?

There are not HUNDREDS, NOT EVEN THOUSANDS, BUT HUNDREDS OF THOUSANDS OF NEW INTERNET USERS EVERY MONTH!

Remember, read the instructions carefully and play FAIRLY...that's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the newsgroup postings to make sure everyone is playing fairly. You know where your name should be.

[I'm only posting this once to comp.sys.[ti, tandy, cbm, atari.8bit],
just in case those readers are interested.]

The "NO MORE COMPUTERS" Auction
------------------------------
I've decided to stick with consoles, so my home computers
are up for auction, as well as their cartridges.

Dennis Brown -- brownde@cs.unc.edu

Auction rules are at the end of the document. Please read before
bidding. Thanks.

** NEW: Due to lack of interest, I've consolidated the cartridges
and systems into bundles. The minimum bids should be more
reasonable now that the cartridges are included with the systems.

---------------------------------------------------------------------
Atari 8-bit Lot: Bid: $30 kloesch
---------------
Atari 130XE (128K)
Power supply
Manual
5 cartridges:
Pac-Man
Qix
Dig Dug
Bug Hunt
Rescue on Fractalus!
More stuff:
Two Atariwriter cartridges, and a manual
Atari Artist cartridge
Pilot programming language cartridge

Commodore VIC-20 Lot: Bid: $25 (minimum)
--------------------
Commodore VIC-20 console (oldest style)
Power supply
Manual
RF Modulator (still needs switchbox + RCA cable)
Commodore Datasette (oldest style)
Several tapes--forgot the exact titles
19 Cartridges:
Avenger Commodore
Cosmic Cruncher Commodore
```

GORF Commodore
Omega Race Commodore
Pin Ball Commodore
Poker Commodore
Slot Commodore
Choplifter Creative
Gridrunner HES
Ms. Pac-Man Atarisoft
Pac-Man + box + manual Atarisoft

Star Trek SEGA
Star Wars: The Arcade Game Parker Brothers

Commodore 1541 Disk Drive (flip-door style)
Power cable
Data cable (drive to computer)
RS-232 adaptor
Several disks of games, some original
[Note: this stuff is packed up in a box at home. I know the
above items are in it, but I don't know the titles of
the games. There are some good ones in there, though.
Maybe even a Fast Load cartridge, but don't count on it.]

Tandy Coco3 Lot: Bid: $20 (minimum)

Tandy Color Computer 3 console (built-in power supply)
Tandy Deluxe Joystick
Wico Trackball (untested--missing power supply)
8 cartridges:
Color Baseball Tandy
Doubleback Radio Shack
Mind-Roll Tandy/Epyx
Panic Button Tandy
Slay the Nereis Radio Shack
Rad Warrior (Coco3 only) Tandy/Epyx
RoboCop (Coco3 only) Tandy/Data East
Silpheed Tandy/Sierra

TI-99/4A Lot

I decided to pull some TI stuff from the auction. Sorry.

TI cartridge bundle: Bid: $5 (min)

Name Publisher

Donkey Kong Atarisoft
Hopper TI
Munch Man TI
Pac-Man (smeared label) Atarisoft
Parsec TI
Picnic Paranoia Atarisoft

Auction rules:
---
* Don't bid unless you're going to buy if you win. Period.
* Auction starts Friday, August 23.
* Auction will enter a going once, going twice, gone phase after
two weeks. This file will be posted once a day (seems to be the norm)
but will always be up-to-date at
http://www.cs.unc.edu/~brownde/museum/auction.txt

It will be e-mail only after the going... phase starts.
[The minimums are higher than other auctions since I want to
keep it under two weeks. I'll lower minimums on items with
no bids by the second week.]

* Send bids to brownde@cs.unc.edu
* Bids will be listed by username unless an alias is requested.
* Minimum raise is $1 for anything under $10
$2 for anything $10 - $49
$5 for anything over $50
* Lots will *not* be broken up.
* Lots will *not* be broken up.
* Lots will *not* be broken up.
* Final bids do NOT include shipping.

* All payments must be in U.S. funds; money orders preferred.

Notes about cartridges:
----
* All cartridges do NOT include box or manual unless otherwise noted.
* All cartridges are in good to excellent cosmetic condition unless noted.
(Good means slight mottling, or a screw hole; excellent means new-looking)
* All cartridges work,

Note about systems:

To hook these systems to a TV (except the TI), each system needs a
switchbox and RCA cable. These are readily available for $5 and $2
at Radio Shack. Get the manual-switch kind, not the automatic kind.

1597. Re: Program to read/write A8 disks on pc

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-25 00:00:00 UTC
From: bmarcum@iglou2.iglou.com
Message-ID: <Dwpx17.8rw@iglou.com>
Source record: 80922

When you put a flippy disk in a double sided drive, you still have to flip it because the controller can't read the side that's turning the wrong way. The XF551 uses the index hole when it formats a disk, but ignores it for ordinary reading and writing.

1598. New Atari 800/800XL emulator coming REAL soon

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-25 00:00:00 UTC
From: mhill@one.net
Message-ID: <32209c3f.1305939@news.one.net>
Source record: 80923
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc,comp.emulators.cbm

All,

Ive been working on 800/800XL emulator in my spare time for awhile.
Its almost ready for its first trial release. Heres a little info on
what it can do.

Runs on MSDOS 386 Systems (Pentium Peferred)
800/800 XL emulation
Run 8K/16K/OSS Super Carts
Standard 320 X 200 screen (scrollable) or Mode X (360 X 240)
Supports two PC joysticks
DLI and VBI supported.
All antic modes
Player Missle Graphics with collision detection
GTIA graphics
Reads XFD and ATR
Supports loading disk images on the fly in slots D1-D8 (menu driven)
Horizontal and vertical fine scrolling
System Monitor

Im working right now on the following

Sound Support (Soundblaster Compatibles)
4 Joystick Support (using printer port joystick interface)
Faster Emulation (right now it seems like you need a fast pentium for
decent emulation. Ill know more when you guys start testing!)
Support for converting raw MSDOS files to Atari disk images on the fly

Im looking for assistance on the following areas.

5200 rom image. I have specs on the 5200 and a friend gave me his
5200 game system. But I don't have any way of reading the rom image
and creating a file. Also an image of the included cart or some other
game would be helpfull. Id like to add 5200 support since its not
that difficult.

Anybody with some good ideas (or even code/samples) on how to best
emulate Atari sound on a PC.

A cool name for it (right now codenamed atari8b).

Watch this space soon for the full announcement on when/where it is
available. If you have any questions feel freee to drop me a line at
the below message.

don't expect to make any money on this, but perhaps someone would like to trade for a registered version of the XFormer Emulator, or similar archaic hardware. naturally, branch always, or emulators + (??) as they are now called would expect you to give up your rights, delete all copies, etc. of your xformer.

any offer conidered, you pay s&h.

Well after discussing with a very nice person, I might actually be getting some books on Atari 8-bit assembler (thank you!). So this leads me into another area that interests me. Cracking the old atari games. I was wondering if someone could point me to some infomration on getting around the 8-bits copy protection. One would go about 'cracking' a game etc etc.

When I first started out on the Atari, I recalled that it was not as hard to do as it is now. Any info?

dave

The PC's diskdrive is double sided, which means that both sides of a Flippy
can be read without flipping the disk (is this actually possible?).
You just have to use the other head of the diskdrive to read the other side.

I seem to remember years back that someone was using a third-party diskdrive
with their Atari 800 (I can't remember the brandname). It was a unit with
two diskdrives built in. Both could read DD disks, and for some reason, the
person who used it had made an extra hole in the plastic covering the
disk so that the timing hole could be read if the disk was flipped. This
person used a special device for making an extra hole for the timing hole to
be read as well as a device for making notches. My 1050 had no problem with
reading flippies without this extra hole, however, I have heard that the XF551
does have a problem like this (or maybe it's just that despite the XF551 being
a double sided diskdrive, you still have to flip your flippies).

AE.

There is another interface called the PR: Connection and you could also
try building the SIO2PC and plugging it into the serial port on you Mac
and using Bobterm on the 8 bit side and a Mac telcom program on the Mac
side. Don't go above 9600 baud since this interface may not be reliable
above these rates when connected this way. It might go higher but you will
have to verify this for yourself...

Most likely (if memory serves) was due to the fact that the original 800
had some chips that were updated over its beginning. One of these was the
CTIA which was updated to the GTIA (the graphics chip) Mode 14 is a GTIA
mode so probabally didn't exisit in CTIA an earlier revision so therefore
basic (written in 1978 by OSS) would not have it..
